Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D010
Waste Description:	SELENIUM
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D016
Waste Description:	2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D024
Waste Description:	M-CRESOL
Waste Code:	D026
Waste Description:	CRESOL
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

COSTCO WHOLESALE 338 (Continued) **1007119507**

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D018
Waste Description: BENZENE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U249
Waste Description: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS OF 10% OR LESS

Waste Code: U279
Waste Description: U279

Waste Code: U409
Waste Description: CARBAMIC ACID, [1,2-PHENYLENEBIS (IMINOCARBONOTHIOYL)]BIS-, DIMETHYL ESTER (OR) THIOPHANATE-METHYL

Waste Code: U411
Waste Description: U411

Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

AVX CORPORATION (Continued) **1015731898**

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

AVX CORPORATION (Continued) **1015731898**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U069
Waste Description: 1,2-BENZENEDICARBOXYLIC ACID, DIBUTYL ESTER (OR) DIBUTYL PHTHALATE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U101
Waste Description: 2,4-DIMETHYLPHENOL (OR) PHENOL, 2,4-DIMETHYL-

Waste Code: U103
Waste Description: DIMETHYL SULFATE (OR) SULFURIC ACID, DIMETHYL ESTER

Waste Code: U115
Waste Description: ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

Waste Code: U123
Waste Description: FORMIC ACID (C,T)

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U160
Waste Description: 2-BUTANONE, PEROXIDE (R,T) (OR) METHYL ETHYL KETONE PEROXIDE (R,T)

Waste Code: U162
Waste Description: 2-PROPENOIC ACID, 2-METHYL-, METHYL ESTER (I,T) (OR) METHYL METHACRYLATE (I,T)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U170
Waste Description: P-NITROPHENOL (I,T) (OR) PHENOL, 4-NITRO-

AVX CORPORATION (Continued) **1015731898**

Waste Code: U173
Waste Description: ETHANOL, 2,2'-(NITROSOIMINO)BIS- (OR) N-NITROSODIETHANOLAMINE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U196
Waste Description: PYRIDINE

Waste Code: U219
Waste Description: THIOUREA

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U228
Waste Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D043
Waste Description: VINYL CHLORIDE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE

ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F017
Waste Description: Not Defined

Waste Code: P035
Waste Description: Not Defined

Waste Code: U029
Waste Description: METHANE, BROMO- (OR) METHYL BROMIDE

Waste Code: U056
Waste Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U188
Waste Description: PHENOL

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

USAF AFRPA MYRTLE BEACH (Continued) **1000227091**

Waste Code:	U226

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D043
Waste Description: VINYL CHLORIDE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE,

USAF AFRPA MYRTLE BEACH (Continued) **1000227091**

ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F017
Waste Description: Not Defined

Waste Code: P035
Waste Description: Not Defined

Waste Code: U029
Waste Description: METHANE, BROMO- (OR) METHYL BROMIDE

Waste Code: U056
Waste Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U188
Waste Description: PHENOL

USAF AFRPA MYRTLE BEACH (Continued) **1000227091**

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

WALMART SUPERCENTER 574 (Continued) **1001961996**

Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D030
Waste Description: 2,4-DINITROTOLUENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: D043
Waste Description: VINYL CHLORIDE

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P046
Waste Description: ALPHA,ALPHA-DIMETHYLPHENETHYLAMINE (OR) BENZENEETHANAMINE, ALPHA, ALPHA-DIMETHYL-

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U089
Waste Description: DIETHYLSTILBESTEROL (OR) PHENOL, 4,4'-(1,2-DIETHYL-1,2-ETHENEDIYL)BIS, (E)-

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129

WALMART SUPERCENTER 574 (Continued) **1001961996**

Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U132
Waste Description: HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U182
Waste Description: 1,3,5-TRIOXANE, 2,4,6-TRIMETHYL- (OR) PARALDEHYDE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U200
Waste Description: RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U210
Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U249
Waste Description: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS OF 10% OR LESS

Waste Code: U279
Waste Description: U279

Waste Code: U409
Waste Description: CARBAMIC ACID, [1,2-PHENYLENEBIS (IMINOCARBONOTHIOYL)]BIS-, DIMETHYL ESTER (OR) THIOPHANATE-METHYL

Waste Code: U411
Waste Description: U411

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

SHWS: Site Assessment Section Project List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

STREET AND ADDRESS INFORMATION

APPENDIX I

Cultural Resources Memorandum

September 25, 2020

Ms. Kally McCormick
CECS, Inc.

RE: Desktop Review of Cultural Resources Located within the Southern Evacuation Lifeline Study Area

The statewide cultural resources database, ArchSite, was queried on September 21 and 22, 2020. The query extracted all records for cultural resources recorded within the Southern Evacuation Lifeline (SELL) study area. For this study, culturally sensitive resources were defined as all resources listed, eligible, or unevaluated for listing on the National Register of Historic Places (NRHP), and cemeteries. The identified resources include historic districts, archaeological sites, structures, and cemeteries. The districts and archaeological sites are symbolized as polygons. Structures and cemeteries are symbolized as points. The submitted geodatabase (SELL_Cultural_Resources) contains six feature classes, projected in NAD 1927 UTM 17N (EPSG: 26717). They are listed in the following table:

Table 1. Feature Class Contents

Resource Type	**Feature Class Name**	**Number of Resources**
NRHP Listed Structures	NRHP_Listed_Structures	23
NRHP Listed Historic Districts	NRHP_Listed_Properties	9
Eligible Historic Structures	Elig_Hist_Structures	8
Eligible Historic Districts	Elig_Hist_Areas	8
Eligible or Unevaluated Archaeological Sites	Elig_FW_Arch_Sites	57
Cemeteries	Cemeteries_GNIS	5
Total Resources		**110**

The query identified 110 known culturally sensitive resources within the SELL study area. This includes 32 resources that are listed on the NRHP, and 73 resources that or eligible or unevaluated for listing. The five included cemeteries were recorded by the federal Geographic Names Information System (GNIS). These are by far not the only cemeteries located within the SELL study area. The website Findagrave.com has 80 cemetery entries for Georgetown County and 160 entries for Horry County. Cemeteries are protected by South Carolina law (S.C. Code of Laws, Section 16-17-600; 27-43-10 through 27-43-40; and 6-1-35).

Please let us know if you have any questions about the data or need additional information.

Sincerely,

NEW SOUTH ASSOCIATES

Natalie Adams Pope
Executive Vice President, SC Branch Manager

	No Data available		
	Transportation disadvantaged CT (USDOT Justice40)		Minority population of BG is 10% higher than county, or over 50% = EJ
	Lower median income than county	LEP	Greater than 5% or 1,000 individuals (Spanish speaking) with limited English
	Poverty: 5% points higher than county, or above 25% poverty for BG = EJ		

APPENDIX B

EJSCREEN SUMMARY

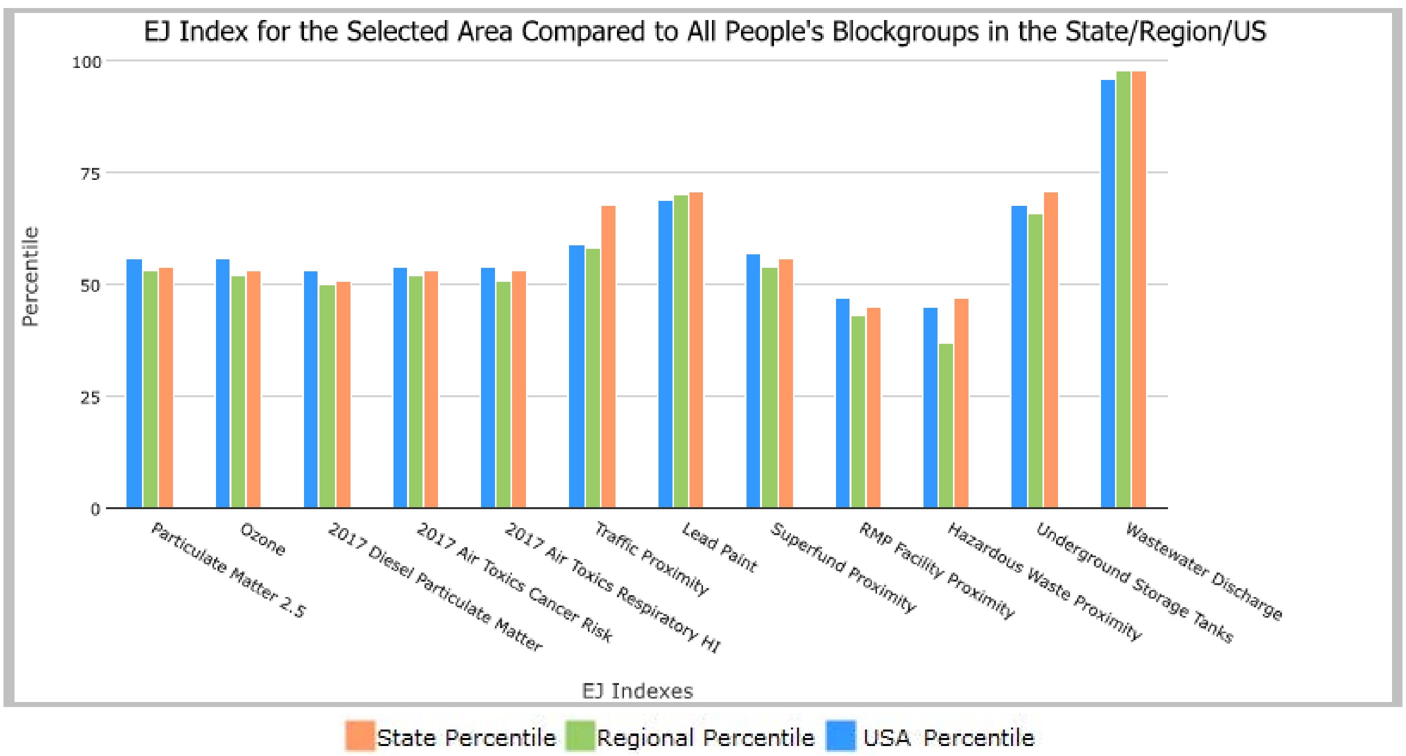
EJScreen Report (Version 2.0)

the User Specified Area, SOUTH CAROLINA, EPA Region 4

Approximate Population: 58,471

Input Area (sq. miles): 141.39

Selected Variables	State Percentile	EPA Region Percentile	USA Percentile
Environmental Justice Indexes			
EJ Index for Particulate Matter 2.5	54	53	56
EJ Index for Ozone	53	52	56
EJ Index for 2017 Diesel Particulate Matter*	51	50	53
EJ Index for 2017 Air Toxics Cancer Risk*	53	52	54
EJ Index for 2017 Air Toxics Respiratory HI*	53	51	54
EJ Index for Traffic Proximity	68	58	59
EJ Index for Lead Paint	71	70	69
EJ Index for Superfund Proximity	56	54	57
EJ Index for RMP Facility Proximity	45	43	47
EJ Index for Hazardous Waste Proximity	47	37	45
EJ Index for Underground Storage Tanks	71	66	68
EJ Index for Wastewater Discharge	98	98	96



This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's 2017 Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: https://www.epa.gov/haps/air-toxics-data-update.

For additional information, see: www.epa.gov/environmentaljustice

EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

APPENDIX L

404(b)1 Memorandum

SECTION 404 (b)(1) ALTERNATIVES ANALYSIS

Southern Evacuation Lifeline (SELL)

Horry County, South Carolina

Draft.03 June 2023

Prepared for
Horry County
South Carolina Department of Transportation

Prepared by
Mead & Hunt

TABLE OF CONTENTS

1 INTRODUCTION

Horry County, in cooperation with the South Carolina Department of Transportation (SCDOT), proposes a new location, multilane, controlled access roadway that will extend approximately 28 miles from US Highway 17 (US 17) to Edward E Burroughs Highway (US 501) and Veterans Highway (SC 22) in Horry County, South Carolina known as the Southern Evacuation Lifeline (SELL). The proposed project will provide a more direct route to the west from the southern portion of the Grand Strand while simultaneously completing a beltway around Myrtle Beach to connect with SC 22. Due to the development in the area and the substantial size of the study area (Please see **Appendix A, Figure 1-1, Project Location Map**), sixteen (16) conceptual alternative corridors have been developed to be evaluated by Horry County.

1.1 Section 404(b)(1) Regulatory Background

The purpose of Section 404(b)(1) of the Clean Water Act (CWA) is to restore and maintain the chemical, physical, and biological integrity of Waters of the United States (WoUS) through the control of discharges of dredged and fill material (33 United States Code [USC] 1344). To fulfill this purpose, dredged or fill material should not be discharged into the aquatic ecosystem unless it can be demonstrated that such a discharge would not have an unacceptable adverse impact either individually or cumulatively (40 CFR Part 230 *et seq.*).

Discharge of dredged or fill materials into WoUS must be permitted and authorized by the U.S. Army Corps of Engineers (USACE). As of December 2022, the US Environmental Protection Agency (EPA) and USACE announced the final revised definition of WoUS rule. On January 18, 2023, the rule was published in the *Federal Register* and will be effective on March 20, 2023. Jurisdictional waters include traditional navigable waters, territorial seas, interstate waters, impoundments, tributaries, wetlands and adjacent wetlands, and other waters that don't fit the previous categories if they can meet the relatively permanent standard or the significant nexus standard.

The EPA Section 404(b)(1) Guidelines (40 CFR 230 *et seq.*) are the environmental criteria used by the USACE to evaluate permit applications involved in the discharge of dredged or fill material into WoUS. Under these guidelines, an analysis of practicable alternatives is the primary tool used to determine whether a proposed discharge can be authorized.

The Section 404(b)(1) Guidelines prohibit discharges of dredged or fill material into WoUS if a practicable alternative to the proposed discharge exists that would have less adverse impacts on the aquatic ecosystem, including wetlands, as long as the alternative does not have other significant adverse environmental impacts (40 CFR § 230[a][2]). An alternative is considered practicable if it is available and capable of being implemented after considering cost, existing technology, and logistics in light of the overall project purpose (40 CFR § 230[a][2]). In summary, the goal is to choose the best practicable alternative that achieves the overall project purpose with the least environmental impacts. But when environmental impacts are unavoidable, the appropriate and practicable steps must be defined to minimize potential adverse effects on the aquatic ecosystem.

The following Section 404(b)(1) alternative analysis shows that all sixteen (16) alternative corridors propose discharges into wetlands or other WoUS and that Alternative Corridor 16 has been identified to be the least environmentally damaging practicable alternative (LEDPA). The No Build Alternative would not involve any discharge of dredge or fill material into wetlands and other WoUS, but it would not achieve the overall purpose of the proposed project and therefore is not considered practicable.

1.2 Organization of Report

Since no Draft Environmental Impact Statement/Draft Environmental Impact Report (DEIS/DEIR) has been developed for this project to date, this Section 404(b)(1) alternative analysis is based on GIS data provided by U.S. Fish & Wildlife Service (USFWS), Horry County, Civil Engineering Consulting Services, Inc. (CECS), and Infrastructure Consulting & Engineering (ICE). Data includes the location of Federal Emergency Management Agency (FEMA) floodplains, protected state and/or federal lands, local parks, South Carolina Department of Health and Environmental Control (SCDHEC) water quality information, U.S. Geological Survey (USGS) contours, topographic mapping, and the location of potential wetlands and other WoUS assessed by ICE. Other databases used in this report include USFWS Information for Planning and Consultation (IPaC), the South Carolina Natural Heritage Program, and the South Carolina Watershed Atlas.

This document provides information and analysis to support the USACE's future determination of the LEDPA. Chapter 1 provides the **Introduction**, including the summarized proposed project background, Section 404(b)(1) regulatory background, and this organization section. Chapter 2 provides the **Project Description** and **Purpose and Need**. Chapter 3 discusses the **Proposed Action and Alternatives** including components of the proposed project and detailed summaries of all sixteen alternative corridors. Chapter 4 discusses the **Environmental Effects of the Proposed Action and Alternatives**, as set forth in Subparts C through H of the Section 404(b)(1) Guidelines and concludes with a brief rationale supporting the preliminarily identified LEDPA.

2 DESCRIBING THE PROJECT

2.1 Project Description

The proposed SELL project was incited by the Interstate 73 (I-73) national highway project that proposes to project a cross-country transportation corridor beginning at Sault Ste. Marie, Michigan, and traversing portions of Ohio, West Virginia, Virginia, and North Carolina before terminating near Myrtle Beach, South Carolina. The I-73 Corridor was identified as a High Priority Corridor by the U.S. Congress in the *Intermodal Surface Transportation Efficiency Act of 1991* (ISTEA). In 2003, the SCDOT completed a feasibility study for the I-73 project starting at the North Carolina state line at U.S. Route 1 in Marlboro County, and terminating at Myrtle Beach in Horry County, South Carolina. The feasibility study recognized that there had been some improvements to roads in the project study area; however, the improved roads were predicted to have capacity problems along some segments in 2025 based on traffic modeling. The study also cited the benefits of the I-73 project, including improved hurricane evacuation and support of population and economic growth (U.S. Department of Transportation, Federal Highway Administration, and the South Carolina Department of Transportation, 2017, p. 73).

After the completion of the 2003 I-73 Feasibility Study, the SCDOT, in association with the Federal Highway Administration (FHWA), issued a Notice of Intent on August 9, 2004 to prepare an Environmental Impact Statement (EIS) for the I-73 project in South Carolina. Due to the length of the project corridor of approximately 80 miles, the EIS was broken into two segments along I-73, North and South. The South section would begin at I-95 in Dillon County, South Carolina and terminate just west of the SELL project limits at SC 22 in Horry County, South Carolina

(U.S. Department of Transportation, Federal Highway Administration, and the South Carolina Department of Transportation, 2017, p. 73).

The proposed SELL project was a need recognized by Horry County to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River. The SELL Project Study Area (PSA) (**Appendix A, Figure 1-1, Project Location Map**) encompasses an area from US 501/SC 22 to US 17, just east of the I-73 national highway project. Due to the substantial size of the SELL study area, sixteen (16) conceptual alternative corridors were developed to analyze which corridor may impose the least environmental and human impacts while also satisfying the project purpose and need.

2.2 Project Purpose

For Section 404(b)(1) evaluations, project purpose is expressed in terms of "basic purpose" and "overall purpose." The basic project purpose comprises the fundamental, essential, or irreducible purpose of the proposed project, and is used by the USACE to determine whether the applicant's project is water dependent. If an activity associated with the discharge proposed for a water body does not require access or proximity to water to fulfill its basic purpose, the activity is not water dependent. Non-water dependent activities that would impact special aquatic sites are subject to more evaluation. The term "special aquatic sites (SAS)," as defined by the Section 404(b)(1) Guidelines includes "geographic areas, large or small, possessing special ecological characteristics of productivity, habitat, wildlife protection, or other important and easily disrupted ecological values." The Guidelines specifically name sanctuaries and refugees, wetlands, mud flats, vegetated shallows, coral reefs, riffle and pool complexes as SAS (40 CFR 230 *et seq.*). The proposed SELL project contains SAS within each of the 16 alternative corridors. Specifically, freshwater wetlands and the Waccamaw Wildlife Refuge would be affected.

The basic project purpose of the proposed SELL project is "freeway mobility improvements." Since the basic project purpose presumably could be achieved without affecting SAS, the project is not water dependent.

The overall project purpose of the proposed SELL project is to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River.

2.3 Project Need

The volume to capacity (V/C) ratio represents a comparison of the actual volume of traffic carried by a roadway to the theoretical capacity of the roadway. As the V/C approaches 1.0, or when the remaining available capacity is less than 0.2, the roadway becomes increasingly congested. The 2040 projected levels of volume to capacity would exceed 1.00 or more along major routes within the SELL PSA including US 501, Corporal Dennis Lyden Memorial Highway (SC 544), US 17, and SC 707.

Travel time is the total number of minutes a trip will take for a motorist. Travel times increase as traffic congestion increases. Travel times in the 2040 no build scenario would be increased in the peak morning and afternoon periods, particularly in the afternoon commute period. For example, in the afternoon period in 2040, a motorist going from the intersection of US 17 and SC 544 to US 501 and SC 22 would travel for approximately 115 minutes in the no build scenario. A trip in 2040 with free-flowing traffic between those points would take approximately 30 minutes.

Of concern within the SELL PSA is the evacuation of Zones A, B, and C during a Category 4 or 5 storm. The local population for these three zones is 229,060, with an additional seasonal population of 202,500. The current permanent and seasonal populations have limited routes to travel north and west during evacuation periods.

Crossing the Waccamaw River and the Atlantic Intercostal Waterway is limited to two roads approximately 35 miles apart, US 501 and US 17. The restricted ability to cross the Waccamaw River has isolated the South Strand of the Waccamaw Neck areas as well as areas located west of the river from the areas east of the river.

3 PROPOSED ACTION AND ALTERNATIVES

3.1 ALTERNATIVES DEVELOPMENT/BACKGROUND

Sixteen (16) conceptual alternative corridors were developed to analyze potential environmental and human impacts for the proposed SELL project. Each alternative corridor begins at the existing intersection of US 501 and SC 22 northwest of the City of Conway, South Carolina. All alternative corridors, save Alternative Corridors 7 through 9, terminate at US Highway 17. Alternative Corridors 7 through 9 terminate at Carolina Bays Parkway (SC 31). Feasible and practicable alternatives are described below. Alternatives 1 through 13 are all new alignments. Alternatives 14 and 15 are a combination of new alignments and existing routes. Alternative 16 is entirely on existing routes. For the alternatives that incorporate the existing routes, the existing arterials alignments were analyzed with widening by two additional lanes: one in each direction. All new alignments were analyzed as six-lane expressways to accommodate the traffic projections and address high levels of congestion.

No Build Alternative was generally defined as the existing stretch of roadway from US 501 and SC 22 interchange to SC 544; and from the SC 544 and US 501 interchange to US 17. Because the No Build Alternative would not meet the project's purpose and need, it is not considered a practicable alternative under the Section 404(b)(1) Guidelines; however, it is carried forward in the Section 404(b)(1) analysis as representing the reasonably anticipated conditions to occur in the area in the absence of Federal action (i.e., it is the federal baseline of comparison in evaluating the alternatives, including the LEDPA).

Alternative 1 (Please see **Appendix A, Figure 2-1, Alternative 1 Corridors Map**) would consist of a 29.07-mile new location roadway beginning at US 501/SC 22 traveling south/southwest before crossing Garners Ferry Road (US 378) and turning south/southeast. The proposed roadway would then continue generally parallel to the Pee Dee Highway to US 701 and continue to south of the Bucksport area. There, it would turn east and travel across the Waccamaw River/Wildlife Refuge. The corridor would continue approximately 2.5 miles before turning northeast to cross SC 707 before joining and following Holmestown Road to its intersection with US 17.

Alternative 2 (Please see **Appendix A, Figure 2-2, Alternative 2 Corridors Map**) would consist of a 28.81-mile new location roadway beginning at US 501/SC 22 traveling south/southwest before crossing US 378 and turning south/southeast. The proposed roadway would then continue generally parallel to the Pee Dee Highway to US 701 and continue to south of the Bucksport area where it would turn east, travel across the Waccamaw River/Wildlife Refuge, and continue approximately 2.5 miles before turning southeast across SC 707 and Daybreak Road. At McDowell Shortcut Road, the corridor would turn east before snaking around *Indigo Creek Golf Course* and between subdivisions *Meadowoods* and *The Lakes* before meeting US 17 approximately 0.24-mile north of St. James Road.

Alternative 3 (Please see **Appendix A, Figure 2-3, Alternative 3 Corridors Map**) would consist of a 28.79-mile new location roadway beginning at US 501/SC 22 traveling south across US 378 and Cates Bay Highway where it would turn south/southwest at the Pee Dee Highway. The proposed roadway would then continue generally southeast parallel to the Pee Dee Highway to US 701 and continue to south of the Bucksport area where it would turn east, travel across the Waccamaw River/Wildlife Refuge, and continue approximately 2.5 miles before turning northeast to cross SC 707, joining and following Holmestown Road to its intersection with US 17.

Alternative 4 (Please see **Appendix A, Figure 2-4, Alternative 4 Corridors Map**) would consist of a 28.53-mile new location roadway beginning at US 501/SC 22 traveling south across US 378 and Cates Bay Highway where it would turn south/southwest at the Pee Dee Highway. The proposed roadway would then continue generally southeast parallel to the Pee Dee Highway to US 701 and continue to south of the Bucksport area where it would turn east, travel across the Waccamaw River/Wildlife Refuge, and continue approximately 2.5 miles before turning southeast across SC 707 and Daybreak Road. At McDowell Shortcut Road, the corridor would turn back to the east before snaking around *Indigo Creek Golf Club* and between subdivisions *Meadowoods* and *The Lakes* before meeting US 17 approximately 0.24-mile north of St. James Road.

Alternative 5 (Please see **Appendix A, Figure 2-5, Alternative 5 Corridors Map**) would consist of a 29.33-mile new location roadway beginning at US 501/SC 22 traveling south across US 378 and Cates Bay Highway where it would turn south/southeast starting approximately 1.2 miles northwest of Pauley Swamp Road. The proposed roadway would then slowly turn south/southwest at Bucksville, running parallel to US Highway 701 before turning back south to cross US 701 and continue to south of the Bucksport area. The roadway would then turn east, travel across the Waccamaw River/Wildlife Refuge, and continue approximately 2.5 miles before turning northeast to cross SC 707 before joining and following Holmestown Road to its intersection with US 17.

Alternative 6 (Please see **Appendix A, Figure 2-6, Alternative 6 Corridors Map**) would consist of a 29.07-mile new location roadway beginning at US 501/SC 22 traveling south across US 378 and Cates Bay Highway where it would turn south/southeast starting approximately 1.2 miles northwest of Pauley Swamp Road. The proposed roadway would then slowly turn south/southwest at Bucksville, running parallel to US Highway 701 before turning back south to cross US 701 and continue south of the Bucksport area. The roadway would then turn east, travel across the Waccamaw River/Wildlife Refuge, and continue approximately 2.5 miles before turning southeast across SC 707, Grape Arbor, and Daybreak Road. At McDowell Shortcut Road, the corridor would turn back east before snaking between *Indigo Creek Golf course* and between subdivisions *Meadowoods* and *The Lakes* before meeting US 17 approximately 0.24-mile north of St. James Road.

Alternative 7 (Please see **Appendix A, Figure 2-7, Alternative 7 Corridors Map**) would consist of a 21.20-mile new location roadway beginning at US 501/SC 22 traveling south across US 378 and Cates Bay Highway where it would turn south/southeast starting approximately 1.2 miles northwest of Pauley Swamp Road. The proposed roadway would then continue southeast across US Highway 701 near Toddville and the Waccamaw River/Wildlife Refuge to SC 544 to its terminus at the SC 31 approximately 2.30 miles southwest of US 501.

Alternative 8 (Please see **Appendix A, Figure 2-8, Alternative 8 Corridors Map**) would consist of a 20.48-mile new location roadway beginning at US 501/SC 22 traveling southwest toward SC 876 before turning southeast. The proposed roadway would cross US 378 and Cates Bay Highway and curve southward approximately 0.50 mile south of Pitch Landing Road. Just west of US 701, the road would turn south and run parallel along US 701 before curving east to cross the Waccamaw River/Wildlife Refuge just north of the US 701/Rheuark Drive intersection. The proposed roadway would cross the Waccamaw River and meet at SC 544 and Farrier Drive approximately 2.60 miles southeast of the Waccamaw River. The corridor would continue east through undeveloped land to avoid impacts to residential properties before terminating at SC 31.

Alternative 9 (Please see Appendix A, Figure 2-9, Alternative 9 Corridors Map) is nearly identical to Alternative 8 with one exception. Alternative 9 would cross Dirty Branch Road approximately 0.80-mile south of its intersection with US 378, but it would not turn south to follow Dirty Branch Road; instead, the road would turn southeast through the *Woodland Lakes* subdivision before turning south to cross Dirty Branch Road and Cates Bay Highway. Alternative 9 would then cross Cates Bay Highway to follow Bridgette Lane before curving south to meet the proposed Alternative 8 corridor. Just west of US 701, the road would turn south and run parallel along US 701 before curving east to cross the Waccamaw River/Wildlife Refuge just north of the US 701/Rheuark Drive intersection. The proposed roadway would cross the Waccamaw River and meet at SC 544 and Farrier Drive approximately 2.60 miles southeast of the Waccamaw River. The corridor would continue east through undeveloped land to avoid impacts to residential properties before terminating at SC 31.

Alternative 10 (Please see Appendix A, Figure 2-10, Alternative 10 Corridors Map) would consist of a 29.79-mile new location roadway beginning at US 501/SC 22 traveling southwest toward SC 876 before turning southeast. The proposed roadway would cross US 378 and Cates Bay Highway and curve southward approximately 0.50 mile south of Pitch Landing Road. Just west of US 701, the road would turn south and run parallel along US 701 to the Pee Dee Highway where it would curve southeast, cross US 701 and continue southeast to Bucksport. As the new roadway crosses Treatment Road, it would begin to turn east to cross the Waccamaw River/Wildlife Refuge and continue approximately 2.5 miles before turning northeast to cross SC 707 before joining and following Holmestown Road to its intersection with US 17.

Alternative 11 (Please see Appendix A, Figure 2-11, Alternative 11 Corridors Map) is nearly identical to Alternative 10 with one exception. Alternative 11 would cross Dirty Branch Road approximately 0.80-mile south of its intersection with US 378, but it would not turn south to follow Dirty Branch Road; instead, the road would turn southeast through *Woodland Lakes* subdivision before turning south to cross Dirty Branch Road and Cates Bay Highway. Alternative 11 would then cross Cates Bay to follow Bridgette Lane before curving south to meet the proposed Alternative 10 corridor. Just west of US 701, the road would turn south and run parallel along US 701 to the Pee Dee Highway where it would curve southeast, cross US 701 and continue southeast to Bucksport. As the new roadway crosses Treatment Road, it would begin to turn east to cross the Waccamaw River/Wildlife Refuge and continue approximately 2.5 miles before turning northeast to cross SC 707 before joining and following Holmestown Road to its intersection with US 17.

Alternative 12 (Please see Appendix A, Figure 2-12, Alternative 12 Corridors Map) would consist of a 29.79-mile new location roadway beginning at US 501/SC 22 traveling southwest toward SC 876 before turning southeast. The proposed roadway would cross US 378 and Cates Bay Highway and curve southward approximately 0.50 mile south of Pitch Landing Road. Just west of US 701, the road would turn south and run parallel along US 701 to the Pee Dee

Highway where it would curve southeast, cross US 701 and continue southeast to Bucksport. As the new roadway crosses Treatment Road, it would begin to turn east to cross the Waccamaw River/Wildlife Refuge and continue approximately 2.5 miles before turning southeast across SC 707 and Daybreak Road. At McDowell Shortcut Road, the corridor would turn back east before snaking around *Indigo Creek Golf Course* and between subdivisions *Meadowoods* and *The Lakes* before meeting US 17 approximately 0.24-mile north of St. James Road.

Alternative 13 (Please see **Appendix A, Figure 2-13, Alternative 13 Corridors Map**) is nearly identical to Alternative 12 with one exception. Alternative 13 would cross Dirty Branch Road approximately 0.80-mile south of its intersection with US 378, but it would not turn south to follow Dirty Branch Road; instead, the road would turn southeast through *Woodland Lakes* subdivision before turning south to cross Dirty Branch Road and Cates Bay Highway. Alternative 13 would then cross Cates Bay Highway to follow Bridgette Lane before curving south to meet the proposed Alternative 12 corridor. Just west of US 701, the road would turn south and run parallel along US 701 to the Pee Dee Highway where it would curve southeast, cross US 701 and continue southeast to Bucksport. As the new roadway crosses Treatment Road, it would begin to turn east to cross the Waccamaw River/Wildlife Refuge and continue approximately 2.5 miles before turning southeast across SC 707 and Daybreak Road. At McDowell Shortcut Road, the corridor would turn back east before snaking around *Indigo Creek Golf Course* and between subdivisions *Meadowoods* and *The Lakes* before meeting US 17 approximately 0.24-mile north of St. James Road.

Alternative 14 (Please see **Appendix A, Figure 2-14, Alternative 14 Corridors Map**) would consist of a 23.91-mile roadway that would utilize both existing and new location roads beginning at US 501/SC 22. The proposed corridor would follow US 501 southeast toward Conway, turn south at El Bethel Road and follow El Bethel Road and the proposed Conway Perimeter Road to US 701. The corridor would then continue southeast through the *Pecan Grove* subdivision and cross the Waccamaw River/Wildlife Refuge. The proposed road would then turn south to follow SC 544 to its intersection with US 17.

Alternative 15 (Please see **Appendix A, Figure 2-15, Alternative 15 Corridors Map**) would consist of a 25.45-mile new location roadway that would utilize both existing and new location roads beginning at US 501/SC 22. The proposed corridor would follow US 501 southeast toward Conway, turn south at El Bethel Road and follow El Bethel Road and the proposed Conway Perimeter Road to US 701. The corridor would then continue southeast through the *Pecan Grove* subdivision and cross the Waccamaw River/Wildlife Refuge. The corridor would then turn north to meet US 501 at Academy Drive. The road would follow US 501, turn south at SC 544, and follow SC 544 to its intersection with US 17.

Alternative 16 (Please see **Appendix A, Figure 2-16, Alternative 16 Corridors Map**) would consist of a 23.39-mile improvement of strictly existing roadway beginning at US 501/SC 22. The proposed corridor would follow US 501 southeast toward Conway and then turn right at SC 544 and follow SC 544 to its intersection with US 17. Alternative 16 is identified as the least environmentally damaging practicable alternative (LEDPA) due to: the lowest impacts to WoUS, critical threatened & endangered species habitat, and no impacts to the Waccamaw Wildlife Refuge.

3.1.1 Proposed Conditions

The proposed roadway would consist of three distinct typical sections through the corridor: a four (4)-lane divided highway with two (2) lanes in each direction, a four (4)-lane highway with two (2) lanes in each direction divided by a jersey barrier, and a four (4)-lane bridge section with two (2) lanes in each direction. New interchanges are proposed for each corridor described below.

- The existing US 501/SC 22 interchange would be extended to the west to accommodate Alternative Corridors 1-13.
- A new interchange would be added where the proposed roadway crosses US 378 to accommodate for Alternative Corridors 1-13;
- A new interchange would be added where the proposed roadway crosses US 701 northeast of Little Hill Drive to accommodate for Alternative Corridors 1-6 and 10-13 or south of Toddville to accommodate for Alternative Corridors 7-9.
- A new interchange would be added where the proposed roadway crosses SC 544 at its existing intersection with Farrier Drive for Alternative Corridors 7-9 and SC 544 at its existing interchange with US 501 to accommodate for Alternative Corridors 14-16.
- A new interchange would be added where the proposed roadway terminates at SC 31 across from Squealer Lake Trail to accommodate for Alternative Corridors 7-9.
- A new interchange would be added where the proposed roadway crosses US 17 at its existing intersection with Holmestown Road/Glenns Bay Road to accommodate for Alternative Corridors 2, 4, 6, 12, and 13.

Each alternative corridor would mostly follow undeveloped land to avoid impacts to residential properties with the exception of Alternative Corridors 14-16, which generally follow along existing roadways US 501 and SC 544.

3.2 Proposed Section 404 Discharges and Section 404(b)(1) Alternatives Analysis

3.2.1 Proposed Section 404 Discharges Requiring an USACE Permit

Implementation of each of the sixteen (16) alternatives would result in CWA Section 404 discharges of fill material into WoUS. Due to the preliminary stage of this project, analysis of potentially impacted WoUS is based on desktop review/verification of WoUS and the assumption that impacts would be limited to the study area boundary for each alternative corridor. Therefore, the level of impacts to WoUS is conservative and not to be interpreted as conclusive.

Infrastructure Consulting & Engineering (ICE) was tasked with the preliminary identification of potential wetlands and other WoUS along each of the sixteen (16) alternative corridors. Specifically, ICE implemented a GIS desktop approach utilizing various available mapping resources along with field verification reviews. This evaluation captured *potential* WOUS based on Preliminary Jurisdictional Determination (PJD) guidelines as well as the “Revised Definition of Waters of the United States", published on January 18, 2023 and effective March 20, 2023. Subsequent wetland delineations and jurisdictional determinations will be appropriately conducted as the project progresses according to the most up-to-date definition of WoUS. The desktop delineation process includes the initial identification of aquatic resources including wetlands, streams, and open waters (ponds). Figures 3 through 5 below depict the potential impacts to aquatic resources within each of the sixteen (16) alternatives in bar graphs. Aquatic resource loss would result from placement of roadway fill, drainage infrastructure, bridge columns (if footing is proposed), bridge abutments, and potential dredging.

FIGURE 3: POTENTIAL IMPACTS TO STREAMS

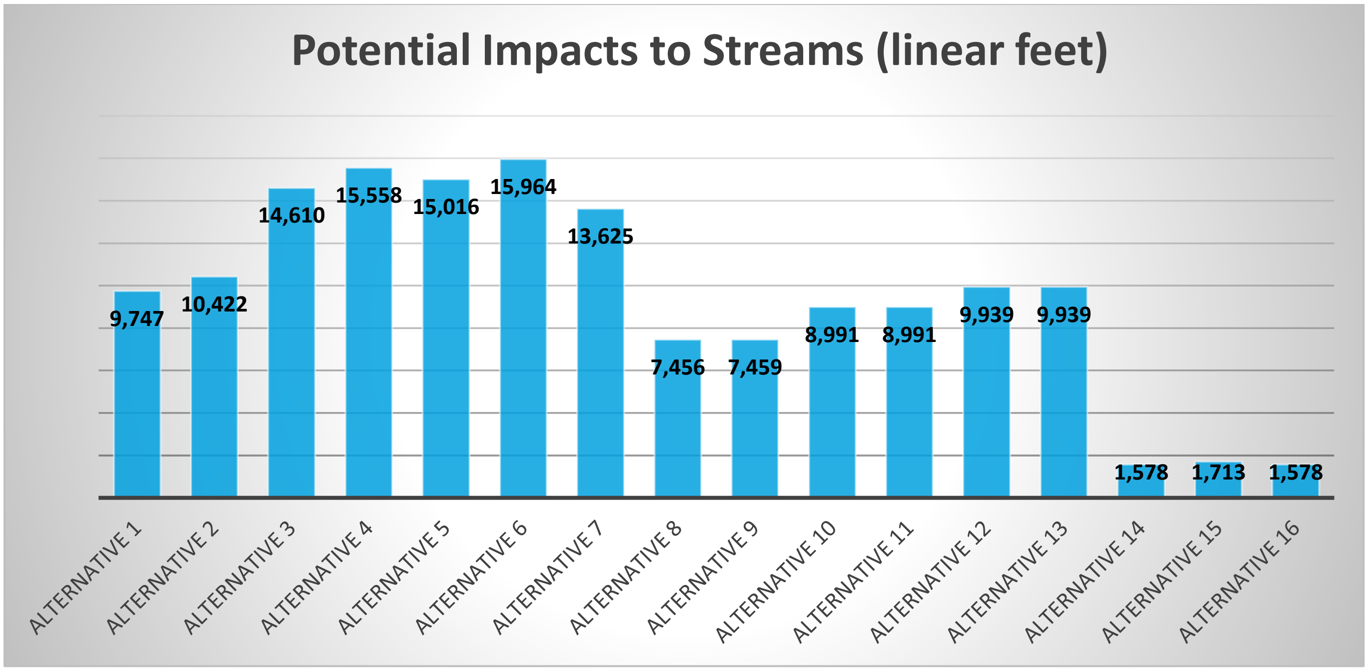

FIGURE 4: POTENTIAL IMPACTS TO WETLANDS

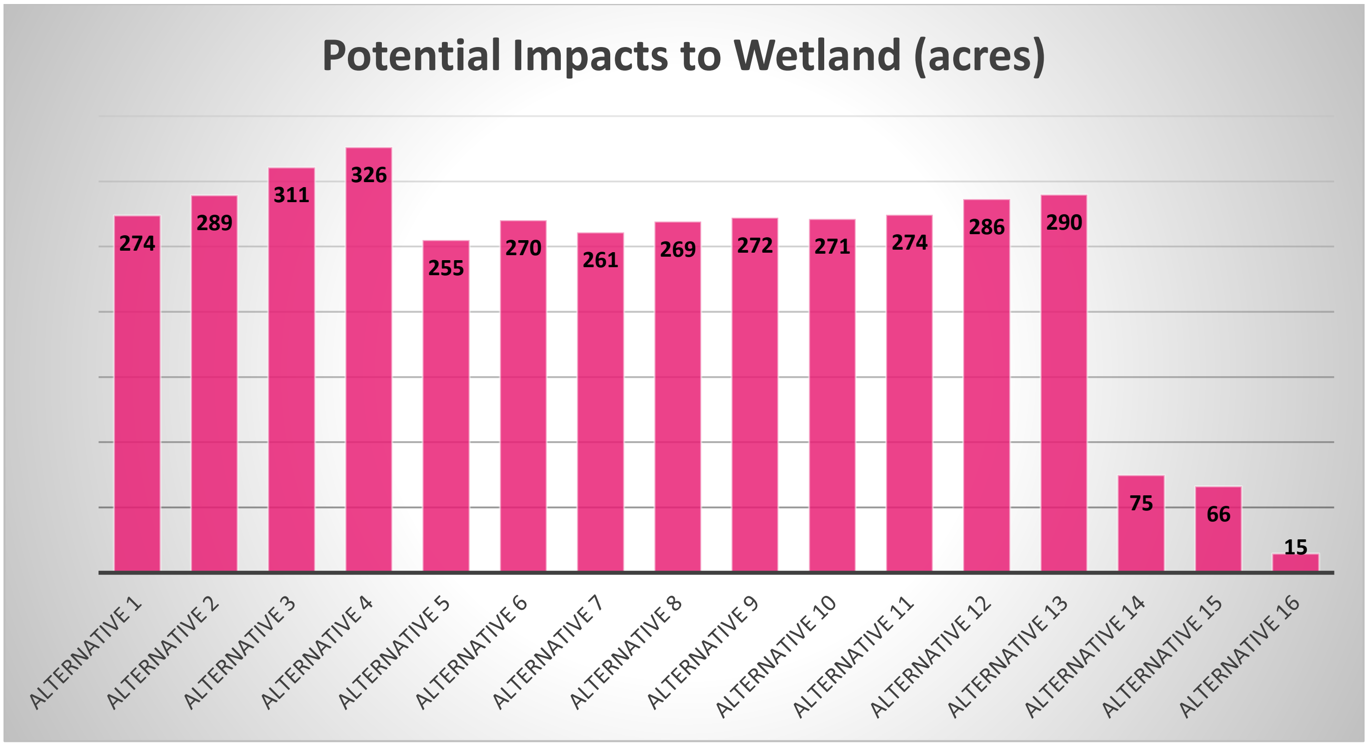

FIGURE 5: POTENTIAL IMPACTS TO PONDS

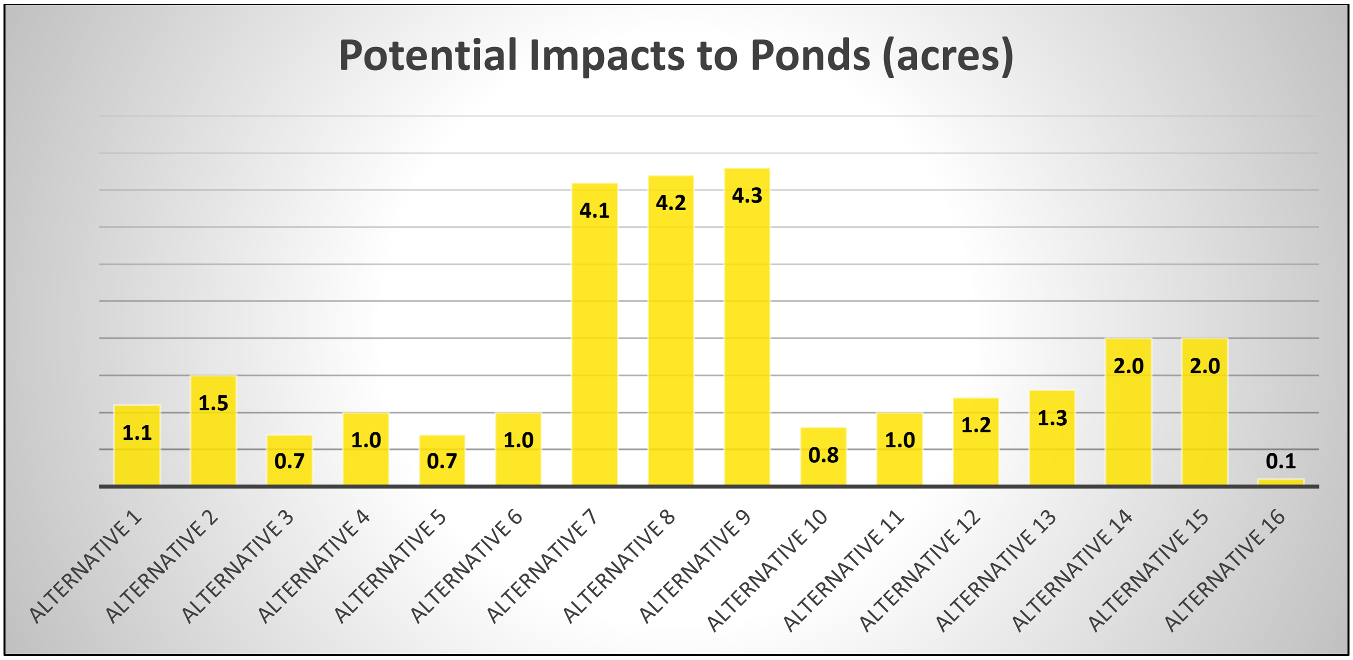

As shown in the figures above, Alternative 16 would permanently impact the fewest acres/linear feet of aquatic resources, including wetlands. Therefore, Alternative 16 would have the least permanent impacts on WoUS [streams (1,578 linear feet); ponds (0.1 acres), and SAS wetlands (15.0 acres)].

As previously noted, the No Build Alternative would not result in any aquatic resource loss. It represents the conditions reasonably expected to prevail in the area in the absence of Federal action, and specifically for the Section 404(b)(1) analysis, the issuance of a USACE permit. However, the No Build Alternative does not satisfy the project purpose and need.

3.2.2 Section 404(b)(1) Alternatives Analysis

This alternatives analysis was prepared in accordance with 40 CFR Part 230, Section 404(b)(1) Guidelines for Specification of Disposal Sites for Dredged or Fill Material (the Guidelines). It states and evaluates information regarding the effects or proposed discharge of dredged or fill material into WoUS, including wetlands. As noted in Chapter 1, pursuant to Section 404(b)(1) of the CWA, the USACE may only authorize the practicable alternative with the least damage to aquatic resources unless it has other significant adverse environmental consequences; with practicable alternatives being those that are available and capable of being done after taking into consideration cost, existing technology, and logistics considering the overall project purpose (Caltrans, 2013).

As noted in Chapter 2, because the basic purpose of the proposed activity is not water dependent and would discharge dredged or fill material into special aquatic sites (SAS), it is necessary to rebut the following presumptions: (1) alternatives for non-water dependent activities that do not involve SAS are available and (2) alternatives that do not involve SAS have less impact on the aquatic environment.

3.2.3 On-Site and Off-Site Special Aquatic Sites Avoidance Alternatives

Due to the project scope/size, no practicable alternative exists which would avoid all aquatic resources, unless the alternatives proposed along new location roadways would construct bridges throughout the corridor. Bridging new location roadways along Alternative Corridors 1 through 15 would prove to be astronomically expensive and therefore, would not take into consideration cost and logistics in light of the overall project purpose. It is important to note that the construction of a new bridge is proposed along each alternative that would cross the Waccamaw River, except for Alternative Corridor 16 which proposes to widen the existing bridge over the Waccamaw River. This would not result in complete avoidance of wetlands throughout the remainder of each corridor.

The Section 404(b)(1) alternatives analysis below compares the impacts of all sixteen (16) alternatives and the No Build Alternative and preliminarily identifies the LEDPA (Alternative Corridor 16). This identification is made on the basis of the relative severity of impacts on various environmental functional components of wetlands and other WoUS, as discussed more fully in Chapter 4, Subparts C through F, and summarized in Table 1 below.

TABLE 1: SUMMARY OF IMPACTS ON WATERS OF THE U.S. BY ALTERNATIVES

Functional Component	No Federal Action	Preliminary Least Environmentally Damaging Alternative (Build Alternative)
Waters of the U.S.	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Subpart C: Potential Impacts on Physical and Chemical Characteristics of the Aquatic Ecosystem		
Substrate	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Suspended Particulates/Turbidity	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Contaminants	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Water	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Current Patterns and Water Circulation	No Effect	**No discernible effect among build alternatives** that would directly or indirectly alter existing current patterns and water circulation.

Functional Component	No Federal Action	Preliminary Least Environmentally Damaging Alternative (Build Alternative)
Salinity Gradients	No Effect	**No discernible effect among build alternatives** due to freshwater conditions of all aquatic resources within the PSA except for the Atlantic Intracoastal Waterway along Alternative Corridors 14 through 16. However, the proposed bridge widening along SC 544 would not affect the salinity of the Intracoastal Waterway.
Subpart D: Potential Impacts on Biological Characteristics of the Aquatic Ecosystem		
Federally Listed Endangered Species	No Effect	Similar on species and habitats throughout each corridor but the **least acreage of impacts proposed on potential habitat/undeveloped land is Alternative 16**.
Critical Habitat, overall	No Effect	**No USFWS/NOAA NMFS Critical Habitat is present** within all sixteen (16) alternatives.
Fish, Crustaceans, Mollusks, and Other Aquatic Organisms in the Food Web	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figures 3-5 under Chapter 3.2.1).
Essential Fish Habitat	No Effect	**No impacts to Essential Fish Habitat (EFH) would occur under Alternative Corridors 7 through 9** as identified by NOAA. Therefore, these corridors are the least damaging to EFH. Essential Fish Habitat does exist along the Waccamaw River and Intracoastal Waterway along Alternative Corridors 1-6 and 10-16. Impacts along these waterways would be due to the construction of new bridge or widening of the existing bridge along US 501 and SC 544. Specifically, impacts would be indirect in the form of increased shading and noise pollution to EFH.
Other Wildlife and Wildlife Corridors	No Effect	**Least damaging to managed lands owned by the USFWS and SCDNR would be Alternative 16.**
Subpart E: Potential Impact on Special Aquatic Sites		

Functional Component	No Federal Action	Preliminary Least Environmentally Damaging Alternative (Build Alternative)
Special Aquatic Sites	No Effect	Impacts proportional to delineated aquatic resources; **least damaging overall is Alternative 16** (see Figure 4 under Chapter 3.2.1).
Subpart F: Potential Effects on Human Use Characteristics		
Municipal and Private Water Supplies	No Effect	**Alternative Corridors 8 & 9 have the least impacts to the Horry County Public Water Supply (PWS)**. Alternative Corridors 14 through 16 have the second least impacts to the PWS.
Recreational and Commercial Fisheries	No Effect	**Boat ramps/fishing access spots that may be impacted include:** ~ The Savannah Bluff Boat Ramp located 0.03 mile south of US 501 along **Alternative Corridor 16**; ~The SC 544 Boat Ramp located within the study area of Alternatives 14 through 16 and the SC 544 fishing pier located 0.01 mile northeast of the study area of **Alternatives 14 through 16**.
Water-Related Recreation	No Effect	**Alternative Corridors 1 through 13 would pose less potential impact to water-related recreation** as they would be centralized to only the Waccamaw River and would not interfere with any existing boat ramps or fishing piers, making water-related recreation more accessible than Alternative Corridors 14 through 16.
Aesthetics	No Effect	**Least acreage of impacts on undeveloped/protected/pristine land is Alternative 16.**
Parks, National and Historic Monuments, National Seashores, Wilderness Area, Research Sites, and Similar Preserves	No Effect	**No impacts to the Waccamaw Wildlife Refuge or other SCDNR/USFWS managed lands would occur under Alternative 16** (**Appendix A, Figure 6**)**.** Variable impacts more than 1.0 mile across the Waccamaw Wildlife Refuge and SCDNR/USFWS managed lands would occur under Alternatives 1 through 15. **Potential impacts to the following parks/cemeteries are listed below:** ~Conway Dog Park along **Alternative 16** ~Hillcrest Cemetery along **Alternatives 15 & 16** ~Singleton Cemetery along **Alternatives 14 through 16** ~Swing Bridge Park along **Alternatives 14 through 16** **~**Waccamaw Wildlife Refuge along Alternatives 1-15

According to **Table 1**, Alternative Corridor 16 would be the least damaging alternative to WoUS, all sections of Subpart C (Potential Impacts on Physical and Chemical Characteristics of the Aquatic Ecosystem), all sections of Subpart D (Potential Impacts on Biological Characteristics of the Aquatic Ecosystem) except for indirect impacts to Essential Fish Habitat, all sections of Subpart E (Potential Impact on Special Aquatic Sites), and the aesthetics and wildlife/managed lands of Subpart F (Potential Effects on Human Use Characteristics).

It is important to note that while Alternative Corridor 16 reduces much of the environmental impact under Subparts C through E, as well as WoUS, it does possess potential impacts to two (2) boat ramps, one (1) fishing pier, two (2) parks and two (2) cemeteries along its corridor. Consideration to these impacts will need to be factored into the overall cost, logistics, and impacts of each alternative. However, Alternative Corridor 16 still presents as the least environmentally damaging of the practicable build alternatives.

3.3 Section 404(b)(1) Guidelines: Requirements, Restrictions, and Factual Determinations

Under the Section 404(b)(1) Guidelines, non-water dependent, practicable alternatives not involving special aquatic sites are presumed to have less adverse impact on the aquatic ecosystem, unless clearly demonstrated otherwise. Highway and transit projects generally are not water-dependent activities, and many do, as with the proposed project, impact special aquatic sites (Caltrans, 2013).

As discussed above, alternatives completely avoiding special aquatic sites or other waters of the U.S. are impracticable in terms of cost and logistics. Of the sixteen (16) alternatives, Alternative Corridor 16 would have the least impacts on the environment. Furthermore, no discharge will be permitted if it does any of the following (restrictions):

- Violates any SCDHEC water quality standard,
- Violates any applicable toxic effluent standard or prohibition under Section 307 of the CWA,
- Jeopardizes the continued existence of endangered or threatened species under the Endangered Species Act or results in likely destruction or adverse modification of designated critical habitat, or
- Lacks sufficient information to determine compliance with the Guidelines.

The Guidelines also require the alternatives analysis to make factual determinations regarding the following, which are provided in Chapter 4:

- Physical substrate
- Water circulation and salinity gradients
- Suspended particulates/turbidity
- Contaminants
- Aquatic ecosystem and organisms
- Proposed disposal site
- Cumulative effects on the aquatic ecosystem
- Secondary effects on the aquatic ecosystem
- Current patterns and water circulation

A proposed discharge may not be permitted by the USACE if it would cause or contribute to severe degradation to WoUS, which is based on the factual determinations, evaluations, and tests required by Subparts B and G, after consideration of Subparts C-F. This requires considering individual and collective or cumulative effects. In addition, a discharge may not be permitted by the USACE unless appropriate and practicable steps have been taken to minimize potential adverse effects of the discharge on the aquatic ecosystem (Subpart H in the Guidelines) (Caltrans, 2013).

4 ENVIRONMENTAL EFFECTS OF THE PROPOSED ACTION AND ALTERNATIVES

4.1 Waters of the U.S. Impacts

In accordance with the Guidelines, the potential short-term or long-term effects of a proposed discharge of dredged or fill material on the physical, chemical, and biological components of the aquatic environment must be determined. The following discussion provides brief analysis for each of the factors or criteria that must be considered, as set forth in Subparts C through H of the Guidelines. This analysis will be a broad overview due to the preliminary nature of this project. A more detailed analysis may be given at a later date when the number of alternative corridors considered for the SELL project are narrowed down and design is at a later stage.

4.2 Subpart C: Potential Impacts on Physical and Chemical Characteristics of the Aquatic Ecosystem

Aquatic resources in each alternative would be affected by construction, including the effects of cut and fill grading, placement of culverts, and construction of bridges. These drainages would also receive runoff from construction sites and from the completed roadway, bridges, and related features.

All sixteen (16) alternatives are located within the Little Pee Dee River subbasin (HUC 03040204) and the Waccamaw River subbasin (HUC 03040206). Alternative Corridors 1-6 and 10-13 are also located within the Pee Dee River subbasin (HUC 03040207).

The **Little Pee Dee River subbasin** includes the Little Pee Dee River and a major tributary, the Lumber River. Several small to moderately sized tributary streams drain the subbasin, including Buck Swamp, Bear Swamp, and Lake Swamp. Extensive swamplands are associated with much of the main tributaries, resulting in meandering and often ill-defined stream channels. Much of the Little Pee Dee River is designated as a State Scenic River. Most of the water bodies in the Little Pee Dee River subbasin are designated as “Freshwater.” Aquatic life-uses were fully supported in 72% of the water bodies sampled in this subbasin. Recreational use was fully supported in 78% of the sampled water bodies. In 2008, SCDHEC issued a fish consumption advisory for the Little Pee Dee river and the Lumber River from the North Carolina/South Carolina state line to the Great Pee Dee River (South Carolina Water Assessment, 2nd ed., Chapter 5).

The **Waccamaw River subbasin** includes the Waccamaw River, Intracoastal Waterway, Sampit River, and Winyah Bay. Much of the subbasin is occupied by cypress and hardwood swamps and small tributary-stream valleys. The Waccamaw River and Sampit River flow directly into Winyah Bay, which is an important estuary that also receives freshwater from the Pee Dee River. The cities of Georgetown and Conway rely heavily on these streams for commercial transportation. The Waccamaw River is designated "Freshwater" while the Intracoastal Waterway is designated as "Tidal Saltwater." Aquatic life-uses were fully supported in 55% of the water bodies sampled in this subbasin. Recreational use was fully supported in 95% of the sampled water bodies. In 2008, SCDHEC issued a fish consumption advisory for the Waccamaw River and the Intracoastal Waterway in Horry County (South Carolina Water Assessment, 2nd ed., Chapter 5).

The **Pee Dee River subbasin** includes the Great Pee Dee River and is the dominant hydrologic feature of the subbasin. This river originates in North Carolina and receives most of its flow and drainage in North Carolina. Major tributary streams in South Carolina include Black Creek, Catfish Creek, Jefferies Creek, and Thompson Creek. Black Creek, the largest of these tributaries, flows through the more urbanized part of the subbasin. Most streams in this subbasin are associated with extensive swamp areas and follow indistinct channels that divide and recombine. A 70-mile segment of the Pee Dee River from the US 378 bridge to Winyah Bay is designated as a State Scenic River. All water bodies in the Pee Dee River subbasin, except Winyah Bay, are designated "Freshwater." Aquatic-life uses were fully supported in 75% of the water bodies sampled in this subbasin. Recreational use was fully supported in 75% of the sampled water bodies. In 2008, SCDHEC issued a fish consumption advisory for the Great Pee Dee River, Black Creek, and Lake Robinson (South Carolina Water Assessment, 2nd ed., Chapter 5).

4.2.1 Substrate

Aquatic ecosystem substrates underlie open waters of the U.S. and constitute the ground surface in wetlands. Substrates include physical, chemical, and organic materials necessary for the sustenance of the ecosystem. Dredging or deposit of fill can alter or eliminate its functions, and alterations in substrate elevation and composition can result in changes in water circulation, depth, currents, or temperature and can adversely affect benthic conditions and organisms (Caltrans, 2013).

All sixteen (16) alternatives would cross small to moderate sized tributaries, associated freshwater wetlands and swamps, and the Waccamaw River. Alternative corridors that would cross aquatic resources of significant width, such as the Waccamaw River, would propose bridge structures and approaches. Alternative Corridor 16 is the only corridor that would propose to widen an already existing bridge across the Waccamaw River along US 501. Alternative corridors 14 through 16 would also widen an already existing bridge across the Intracoastal Waterway along SC 544.

Permanent impacts would occur to substrates from the placement of new and/or existing roadway such as structural fill, culverts, and bridge piers and abutments for each of the build alternatives. Temporary impacts to substrate would also occur along and adjacent to WoUS from freeway construction, but these areas would be restored to pre-project grades. If and when feasible, grades may be revegetated with native plant species following construction activity within the Waccamaw Wildlife Refuge. Riprap armoring of all bridge abutments would be included in all build alternatives, but under the bridges, no channel bottom armoring would be employed when feasible. Construction of any build alternative, due to ground and vegetative cover removal, could result in scour, sedimentation, and increased rates or volumes of runoff that could impact substrates during construction and could adversely alter the substrate downstream from the direct effects of scour or from the precipitation of silt or contaminants.

Indirect or secondary impacts could result from roadway runoff and human activity from increased access to WoUS. However, in the case of any build alternative, minimization measures would reduce these impacts to the maximum extent practicable. Any build alternative would include silt fencing to restrict access to wetlands and other WoUS from the roadway and use areas, and would employ Best Management Practices (BMPs) to control adverse effects from runoff during construction.

Much of the project footprint for Alternative Corridors 1 through 13 is undeveloped and therefore, would cause significantly more impact to aquatic resources and the associated substrate. Ultimately, Alternative Corridor 16 proposes the least amount of fill/cut to WoUS and therefore, the least amount of permanent substrate impacts (see Figures 3-5 under Chapter 3.2.1).

4.2.2 Suspended Particulates/Turbidity

Both dredging and stormwater runoff are periodic events that take place within each of the alternative corridors. Dredging likely takes place at a higher rate along the Waccamaw River and Intracoastal Waterway where boats are easily accessible. Most of the time, however, turbidity is not elevated in wetlands and other small to moderate sized linear features in the project area.

Temporary BMPs (soil stabilization, sediment control, wind erosion control, tracking control, non-storm-water management, and waste management and materials pollution control) would be implemented where feasible to contain both storm water and non-storm-water discharges during construction. Upon completion of construction, all temporarily disturbed areas would be stabilized or reestablished under all build alternatives. Where areas of active construction for abutments or bridge supports would be located, cofferdams, silt curtains, or other sediment barriers would be employed to avoid the discharge or deposit of excessive sediment or spoils into adjacent WoUS. The State's Stormwater Pollution Prevention Plan describes how the project would comply with the provision of the National Pollutant Discharge Elimination System (NPDES) Permit. As design progresses, the BMP locations and methods would be evaluated and refined.

With the inclusion of BMPs, the project would not negatively affect water quality in the corridor on a long-term basis. Disturbance of wetlands and other WoUS during construction might create turbid conditions that could reduce light penetration in affected waters, adversely affecting aquatic organisms by lowering photosynthesis, increasing temperatures, lowering oxygen levels and primary aquatic system productivity, and interfering with feeding activity for sighted organisms (Caltrans, 2013). Because of greater number of delineated wetlands and other waters, the alternatives with the largest construction footprint covering the greatest number of delineated aquatic resources (Alternative Corridors 3 and 4) would have a greater potential for these effects. Ultimately, Alternative Corridor 16 proposes the least amount of fill/cut to WoUS and therefore, would be expected to have the least impacts to suspended particulates/turbidity. In general, the maximum practical means to control particulates and turbidity impacts would be employed and minor for whichever build alternative is chosen.

4.2.3 Contaminants

Pollutants that could be generated during construction activities include vehicle fluids, asphaltic emulsions from paving activities, concrete curing compounds, solvents and thinners, paint, sandblasting material, landscaping materials, treated lumber, rubble, contaminated soil or rock, and general litter. During operation, potential sources of pollutants in highway runoff include sediment from natural erosion; nutrients (nitrogen and phosphorous) from tree leaves, mineralized organic matter in soil, fertilizers, runoff, nitrite from automobile exhausts, atmospheric deposition, emulsifiers, and surfactants; pesticides; and metals (dissolved and particulate) from combustion products of fossil fuels, wear particles from brake pads, and corrosion (Caltrans, 2013). These pollutants could be generated by both roadway users and SELL maintenance activities.

All build alternatives of the project have the potential to introduce contaminants into WoUS during construction, operation, and maintenance. Direct impacts would result from contaminant spills or migration into WoUS during construction or operations. Indirect impacts could result from the transport of contaminants into WoUS in runoff from existing sources or from the roadway surface (Caltrans, 2013). BMPs would be evaluated, implemented, and maintained to address these impacts during the planning and design, construction, and operational phases regardless of the build alternative chosen.

As design of any of the chosen build alternatives proceeds, standard technology-based, non-treatment controls selected to reduce pollutant discharges to the maximum extent practicable would be incorporated. The objective of these design pollution prevents BMPs is to prevent downstream erosion, stabilize disturbed soil areas, and maximize vegetated surfaces by preservation or restoration. Approved treatments BMPs that may be implemented for all build alternatives include biofiltration systems, multi-chambered treatment drains, infiltration devices, wet basins, detention devices, traction sand traps, dry weather flow diversions, media filters, and gross solid removal devices (Caltrans, 2013).

The size of the construction zone and the amount of impervious surface area proposed in the completed project are rough measures of each alternative's potential to generate pollutants in runoff. In general, water quality controls would be required equally of all the build alternatives, but Alternative Corridor 16 would have the least impacts to WoUS due to its smaller area of proposed impervious surfaces. Alternative Corridors 3 and 4 have the largest impacts due to the size of its construction zone and number of wetlands and other WoUS identified by ICE.

4.2.4 Water

Current 303(d) impaired receiving water bodies in the project area and the contaminant of concern (impairment) are identified in **Table 2** below.

TABLE 2: WATER QUALITY STATIONS WITHIN THE PROJECT AREA

STATION	ALTERNATIVES (INCLUDES UP TO 5 STATIONS)	HUC 12	COUNTY	USE	HG	SCDHEC 303D LISTED	IMPAIRMENT	WOC

Discharge of materials into the aquatic ecosystem could result in loss of functions and values, alter current and flow patterns, change water circulation in the ecosystem, change fluctuation patterns, and may affect salinity gradients if applicable. Where construction impacts WoUS, stream and floodplain characteristics could be affected. Due to the nature of linear transportation projects and the topography and hydrology of the project site, elimination of significant floodplain encroachments is not practicable due to cost, constructability, and maintenance considerations.

Preliminary hydraulic structures at floodplain encroachments will be designed following SCDOT Hydraulic Bridge Design Criteria, which are developed in accordance with FEMA, FHWA, and SCDNR guidelines. Culverts and bridges will be constructed when feasible to avoid the impact of restricting flow from aquatic resources including streams, wetlands, and associated floodplains. Additionally, BMPs listed in the “Contaminants” section 4.2.3 will be implemented.

The build alternative with the least number of potential impacts to WoUS and FEMA floodplain boundaries is Alternative Corridor 16.

4.2.5 Current Patterns and Water Circulation

During widening or construction of the proposed bridges, all build alternatives may temporarily and partially obstruct normal current and circulation patterns by placement of columns and falsework and other construction activity at all bridge locations. Adequate channels would be maintained at all times during construction to allow water level fluctuation, current flow, and circulation within the aquatic resources to occur under normal and fluvial (flood) conditions. Construction methods would also utilize the BMPs and permit conditions set forth in the NPDES permit, SC Navigable Waters permit, and Coast Guard Bridge permit where applicable. After construction is completed, conditions in the Waccamaw River and Intracoastal Waterway would be restored to preconstruction conditions at all bridge crossings.

Besides temporary impacts to water circulation due to bridge construction/widening, the construction of new roadways through streams, wetlands, and associated FEMA regulated floodplains may reduce or eliminate aquatic resource connectivity. Preliminary hydraulic structures at floodplain encroachments will be designed following SCDOT Hydraulic Bridge Design Criteria, which are developed in accordance with FEMA, FHWA, and SCDNR guidelines. Culverts and bridges will be constructed when feasible to avoid the impact of restricting flow from aquatic resources including streams, wetlands, and associated floodplains. In summary, no discernible effect among build alternatives would directly or indirectly alter existing current patterns and water circulation.

4.2.6 Salinity Gradients

Only Alternative Corridors 14 through 16 contain waters with some degree of salinity. Specifically, the Atlantic Intracoastal Waterway is designated as “Tidal Saltwater” by SCDHEC as it is in direct connection to the Atlantic Ocean approximately 23 aerial miles northeast of the study area. The remaining corridors all contain aquatic resources designated as “Freshwater.”

Salinity gradients vary with a number of factors, including strength of tides; the amount of freshwater entering the Waterway and other water bodies from freshwater runoff, stream flows, and precipitation; condition of the openings to the sea; evaporation within the water bodies; and other factors (Caltrans, 2013).

The only work proposed along the Intracoastal Waterway would be to widen the existing bridge. As explained under “Current Patterns and Water Circulation” above, tidal flushing of the Intracoastal Waterway would not change as a result of the proposed project. Minimal and temporary construction methods would be used in the Intracoastal Waterway in order to widen the existing bridge. Such construction methods would utilize the BMPs and permit conditions set forth in the NPDES permit, SC Navigable Waters permit, and Coast Guard Bridge permit.

No direct or indirect changes to the connection of wetlands and other WoUS to openings to the Atlantic Ocean are proposed and, independent of other future projects that would alter the configuration of those openings, the SELL project would not substantially alter salinity gradients in wetlands and WoUS.

4.3 Subpart D: Potential Impacts on Biological Characteristics of the Aquatic Ecosystem

The Federal Endangered Species Act (ESA) of 1973, as amended, is the federal regulatory tool that serves to administer permits, implement recovery plans, and monitor federally protected (endangered and threatened) species. The ESA is administered and regulated by the U.S. Fish and Wildlife Service (USFWS) and/or National Oceanic and Atmospheric Administration-National Marine Fisheries Service (NOAA-NMFS). Because of the federal nexus of the proposed project, consultation with the USFWS is required under Section 7 of the ESA, as amended (16 USC 1531-1534), for proposed projects that "may affect" federally endangered and threatened species.

Species with the federal classification of Endangered (E) or Threatened (T) or Threatened due to Similarity of Appearance (T [S/A]) are protected under the ESA of 1973, as amended (16 U.S.C. 1531 et seq.). The term "endangered species" is defined as "any species which is in danger of extinction throughout all or a significant portion of its range," and the term "threatened species" is defined as "any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range" (16 U.S.C. 1532).

The term "Proposed" (P) is defined as "any species proposed for official listing as endangered or threatened." "Candidate" (C) species are taxons under consideration for which there is sufficient information to support listing, but development of a proposed listing regulation is precluded by other higher priority listing activities. "At-Risk Species" (ARS) is an informal term that refers to those species which may be in need of concentrated conservation actions and have been petitioned for listing as threatened or endangered. The USFWS designations P, C, and ARS do not provide federal protection and require no Section 7 consultation under the ESA. The bald eagle also is no longer protected under the ESA but is afforded federal protection through the Bald and Golden Eagle Protection Act (BGEPA) of 1940.

Please see **Table 3** below for Federal (USFWS) and State (SCDNR) listed Protected Species in Horry County, SC (accessed December 2022). Federally listed threatened and endangered species that may likely have suitable habitat found within the SELL PSA are identified in the table below in **bold**. Please note that the tri-colored bat is in the process of becoming listed as 'endangered' by the end of 2023 for all counties in South Carolina.

TABLE 3: PROTECTED SPECIES IN HORRY COUNTY, SOUTH CAROLINA

PROTECTED SPECIES		PROTECTION	
Common Name	Scientific Name	Federal	State
Bird Species			
Black-capped petrel	*Pterodroma hasitata*	ARS	
American wood stork	*Mycteria americana*	T	E
Bald eagle	*Haliaeetus leucocephalus*	BGEPA	T
Piping plover	*Charadrius melodus*	T, CH	E
Red-cockaded woodpecker	*Picoides borealis*	E	E
Saltmarsh sparrow	*Ammospiza caudacuta*	ARS	-
Red knot	*Calidris canutus rufa*	T, CH	-
Roseate tern	*Sterna dougallii*	E	-

PROTECTED SPECIES		PROTECTION	
Common Name	Scientific Name	Federal	State
Eastern black rail	*Laterallus jamaicensis jamaicensis*	T	-
Swallow-tailed kite	*Elanoides forficatus*	-	E
Least tern	*Sternula antillarum*	-	T
Fish Species			
Atlantic sturgeon*	*Acipenser oxyrinchus*	E, CH	-
Shortnose sturgeon*	*Acipenser brevirostrum*	E	E
Robust redhorse	*Moxostoma robustum*	ARS	-
Carolina pygmy sunfish	*Elassoma boehlkei*	-	T
Insect Species			
Monarch butterfly	*Danaus plexippus*	C	-
Mammal Species			
Northern long-eared bat	*Myotis septentrionalis*	E	-
Tri-colored bat	*Perimyotis subflavus*	Proposed E	-
Rafinesque's big-eared bat	*Corynorhinus rafinesquii*	-	E
West Indian manatee	*Trichechus manatus*	T, CH	E
Finback whale*	*Balaenoptera physalus*	E	-
Humpback whale*	*Megaptera novaengliae*	E	-
Right whale*	*Balaena glacialis*	E	-
Sei whale*	*Balaenoptera borealis*	E	-
Sperm whale*	*Physeter macrocephalus*	E	-
Plant Species			
American chaffseed	*Schwalbea americana*	E	-
Godfrey's stitchwort	*Minuartia godfreyi*	ARS	-
Canby's Dropwort	*Oxypolis canbyi*	E	-
Pondberry	*Lindera melissifolia*	E	-
Harper's fimbristylis	*Fimbristylis perpusilla*	ARS	-
Carolina-birds-in-a-nest	*Macbridea caroliniana*	ARS	-
Ciliate-leaf tickseed	*Coreopsis integrifolia*	ARS	-
Seabeach amaranth	*Amaranthus pumilus*	T	-
Venus flytrap	*Dionaea muscipula*	ARS*	-
Wire-leaved dropseed	*Sporobolus teretifolius*	ARS	-
Reptile Species			
Green sea turtle**	*Chelonia mydas*	T, CH	-
Kemp's ridley sea turtle**	*Lepidochelys kempii*	E, CH	-
Leatherback sea turtle**	*Dermochelys coriacea*	E, CH	-
Loggerhead sea turtle**	*Caretta caretta*	T, CH	T
Spotted turtle	*Clemmys guttata*	ARS	T
Snapping turtle	*Chelydra serpentina*	-	R
Chicken turtle	*Deirochelys reticularia*	-	R
Southern hognose snake	*Heterodon simus*	-	T
Striped mud turtle	*Kinosternon baurii*	-	R
Eastern mud turtle	*Kinosternon subrubrum*	-	R

PROTECTED SPECIES		PROTECTION	
Common Name	Scientific Name	Federal	State
Diamond-baked terrapin	*Malaclemys terrapin*	-	R
Eastern musk turtle	*Sternotherus odoratus*	-	R
Eastern box turtle	*Terrapene Carolina*	-	R

E = Endangered, T = Threatened, ARS = At Risk Species, C = Candidate, R = Rare, CH = Critical Habitat, BGEPA = Bald and Golden Eagle, * = Contact National Marine Fisheries Service (NMFS) for more information, ** = The USFWS and NMFS share jurisdiction of this species

Due to the preliminary stage of analysis for the SELL project, no threatened and endangered species field surveys were conducted within each alternative corridor. A desktop review for any observed sighting of federal or state listed protected species was conducted December 2022 using the South Carolina Natural Heritage Database. The PSA was analyzed within the context of all sixteen (16) alternative corridors.

Based on initial desktop review, several sightings of federal and state protected species were identified. These include the following:

1. **Bald Eagle** was observed in 2022 at Lake Busbee, within 1 mile of Alternative Corridors 14-16.

2. **American chaffseed** was observed in 1954 (possibly extirpated now) just east of SC 544 and just south of US 378. This observed sighting is located right within Alternative Corridors 15 and 16. Another American chaffseed sighting was observed in 1985 (possibly historic) west of US 17 and just south of Freewoods Road. No alternative corridor is located at this sighting.

3. **Rafinesque's big-eared bat** roost was observed in 2022 along US 701 at the southernmost portion of the PSA. No alternative corridor is located at this sighting.

Below are descriptions on the potential direct and indirect impacts on federally listed threatened and endangered species for all build alternatives.

4.3.1 Direct Impacts on Federally Listed Threatened and Endangered Species

For all build alternatives, construction activity within the construction footprint of the project would result in direct, permanent impacts on federally listed species. The Waccamaw River hosts suitable habitat for the American wood stork, bald eagle, Atlantic sturgeon and shortnose sturgeon. The construction of a new bridge across this river is likely to result in direct impacts to each species. Noise generated by construction activities may cause species to migrate, nests may be removed, and biological resources within the river may be affected by increased shading.

Under Alternative Corridors 14 through 16, the Intracoastal Waterway also hosts potential habitat for the West Indian manatee, the Atlantic sturgeon and the shortnose sturgeon. The same direct impacts listed above also may be experienced at the proposed bridge widening along SC 544.

Plants such as the American chaffseed, Canby's dropwort, and pondberry can be found within or on the boundaries of wetlands. Wetlands have been identified within each of the build alternatives. In fact, historic sighting of the American chaffseed have been observed within Alternative Corridors 15 and 16. Plants in each of the construction footprints would be removed and thus are considered permanently impacted, but it may be possible to avoid the plants during construction. If impacts to the plants cannot be avoided, seed would be collected and transplanted to suitable habitat.

The Northern long-eared bat and the tri-colored bat would both need to be surveyed for prior to construction. Both species roost underneath bark, in cavities, or in crevices of both mature living and dead trees. They also can be found under bridges, in pipes/culverts, and abandoned buildings. Because habitat for both species is present for all alternative corridors, direct impacts are likely in the form of tree clearing where their roost cavities would be destroyed. Noise generated by construction activities may also result in temporary direct impacts. Tree clearing activities during the pup season (June 1 through July 31) would be avoided to reduce the level of direct impacts to these species.

4.3.2 Indirect Impacts on Federally Listed Threatened and Endangered Species

Indirect impacts to each federally listed species can result from increased lighting, increased exposure to invasive species and trash or debris, edge effects, increased potential for pollution from storm water runoff, and long-term increases in noise. In the areas where the direct effects on federally listed species would occur, indirect effects would occur to the same species occupying the same habitats adjacent to the construction footprint of each alternative.

4.3.3 Impacts on Critical Habitat

According to USFWS Information for Planning and Consultation (IPaC), no critical habitat is identified within all sixteen (16) alternative corridors. Therefore, no impacts to critical habitat are anticipated under the SELL project.

4.3.4 Comparison/Summary of Impacts on Federally Listed Threatened and Endangered Species

Without proper surveying of each alternative corridor, no conclusion can be made as to the lack and/or presence of federally listed species within each corridor. It can be concluded that suitable habitat does exist for federally listed species identified in **bold** in **Table 3** for all sixteen (16) alternatives. Generally, the greater the footprint of undeveloped land, the greater the risk/potential of impact to federally listed species.

The Waccamaw River/Wildlife Refuge hosts suitable habitat for the American wood stork, bald eagle, Atlantic sturgeon and shortnose sturgeon and it is under Alternative Corridors 1 through 15 that a new roadway/bridge is proposed across the Waccamaw River/Wildlife Refuge. Therefore, direct and indirect impacts to the species that may utilize this river/refuge as habitat are increased under Alternative Corridors 1 through 15 versus Alternative Corridor 16 which would only widen the existing bridge over the Waccamaw River along US 501.

Therefore, Alternative Corridor 16 poses the least threat to protected species. It is important to note that initial desktop reviews identified the presence of federally listed species (the bald eagle and American chaffseed) near or within Alternative Corridor 16. However, the fact that Alternative 16 is one of the more developed alternatives corresponds with the increased likelihood of an observed spotting whereas more pristine/isolated corridors such as Alternative Corridors 1 through 7 have less human foot traffic and therefore, less observed sightings. The potential of finding protected species in such corridors is highly likely once field surveys are underway.

4.3.5 Fish, Crustaceans, Mollusks, and Other Aquatic Organisms in the Food Web

Each of the build alternatives would result in permanent, direct impacts to aquatic species. These impacts would result from the permanent loss of individual organisms and their habitat during and after construction. Permanent, indirect impacts to aquatic organisms could occur from increased pollution runoff due to additional highway traffic, resulting in potential loss of individual species and increased nonnative species plant intrusion, with potential loss of the habitats necessary to support these species (Caltrans, 2013).

Temporary impacts to aquatic organisms in the food web could result from turbidity, sedimentation, pollution, and contamination that could occur during construction and operation of the proposed facility. Where bridges are widening or constructed, permanent impacts could result from increased shading of the biological resources located beneath. Shading would have a permanent indirect effect on vegetation and benthic communities, decreasing overall productivity for some. Increased shading could particularly affect organisms with little or low motility such as mollusks. Beneficial effects may also occur due to increased column and abutment surfaces, which could provide new encrusting habitat. Organisms that prefer lower-light and cooler environments will also thrive under such conditions (Caltrans, 2013).

4.3.6 Comparison of Impacts on Fish, Crustaceans, Mollusks, and Other Aquatic Organisms in the Food Web

Indirect effects such as increased light, shading, and pollution associated with the roadway are classified as edge effects. Shading already exists along the bridge across the Waccamaw River under Alternative Corridor 16 and the bridge across the Intracoastal Waterway under Alternative Corridors 14 through 16. New bridge/shading across the Waccamaw River would occur under Alternative Corridors 1 through 15. Therefore, edge effect is already fully present for Alternative 16 at both bridge crossings and the biological resources under these existing bridges would receive minor impacts relative to Alternative Corridors 1 through 15 where new bridges are proposed in pristine habitats across the Waccamaw River and ultimately, the Waccamaw Wildlife Refuge. Such crossings would experience increased nighttime lighting from the roadway and traffic, increased access from invasive species, bisected habitats, and other edge effects.

Impacts may also be greater to fish, crustaceans, mollusks, and other aquatic organisms the further downstream along the Waccamaw River due to closer proximity to Winyah Bay and where the Intracoastal Waterway drains into the Waccamaw River. Such alternatives that are located further south include Alternative Corridors 1 through 6 and 10 through 13.

4.3.7 Impacts on Essential Fish Habitat

Essential Fish Habitat (EFH) is identified in the Magnuson-Stevens Fishery Conservation and Management Act as "those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity."

Essential Fish Habitat does exist along the Waccamaw River and Intracoastal Waterway under Alternative Corridors 1 through 6 and 10 through 16. Construction of new bridge pilings and fill placed along the abutments could directly impact EFH. Bridge footprints are considered to cause permanent impacts. Shading by the wider bridges may reduce some habitats used by fish; however, structure provided by bridge columns and temperature changes under the bridge may be favored by some fish species. Increased storm water runoff from the wider roadway could have indirect impacts, such as turbidity sedimentation, freshwater influx, and possibly pollutants on EFH (Caltrans, 2013).

BMPs for water quality would be part of the project and would control these indirect runoff impacts under all build alternatives. During construction of the bridges, falsework and some kind of work platform may be used, which could temporarily impact EFH. Based on current NOAA EFH mapping, no EFH is identified under Alternative Corridors 7 through 9. Therefore, these corridors are the least damaging to EFH.

4.3.8 Other Wildlife and Wildlife Corridors

Alternative Corridors 1 through 15 host the Waccamaw Wildlife Refuge, which was established on December 1, 1997 to protect and manage diverse habitat within coastal river ecosystems and to provide wildlife-dependent recreational activities such as hunting, fishing, wildlife observation, photography and environmental education. The wetland diversity within the refuge provides important habitat for migratory birds, fish and other wildlife. Such species include the great blue heron (*Ardea herodias*), snowy egret (*Egretta thula*), black rail (*Laterallus jamaicensis*), red-headed woodpecker (*Melanerpes erythrocephalus*), American wood stork, Atlantic and shortnose sturgeon, Southern rein orchid (*Platanthera flava)*, spotted turtle, and thousands of other unique species. This refuge provides biological value as habitat for resident species and also allows for migration, genetic exchange, and general movement of common, sensitive, and protected wildlife.

Discharge of fill material associated with all of the build alternatives except Alternative Corridor 16 may eliminate or change breeding and nesting areas, destroy escape cover, increase edge effects, alter travel corridors, or remove preferred food sources for resident aquatic species and associated other species. Impacts to corridor crossings between streams, wetlands, and upland could affect small mammals, reptiles, and amphibians. Bird species movement is not as likely to be adversely affected by movement corridor impacts as they can fly over the roadway. However, their nests may be directly impacted.

It is important to note that the presence of wildlife corridors may provide a link between habitat patches, increasing the area available for dispersal, foraging, and breeding. For smaller animals, the corridor itself may provide the habitat needed to sustain viable populations. The bridge proposed across the Waccamaw River may therefore provide increased benefits to the Wildlife Refuge. The bridge should be designed with a bench wide enough to facilitate wildlife movement, or a separate vegetated bridge used specifically for wildlife crossings could be construction below or adjacent to the roadway. This would reduce the chance of fatal or injury-causing collisions with wildlife. Constructing along Alternative Corridor 16 would avoid these concerns altogether as it is not even located within the Waccamaw Wildlife Refuge.

4.4 Subpart E: Potential Impacts on Special Aquatic Sites

All wetlands, the Waccamaw River, and the Waccamaw Wildlife Refuge are all considered special aquatic sites. All build alternatives would have permanent and temporary impacts on at least one of these sites. Direct, permanent impacts on special aquatic sites would eliminate the biological productivity in these areas and possess the potential to indirectly impact them by introducing contaminants or pollutants and increasing suspended particulates or turbidity.

According to Figure 4 under Chapter 3.2.1, Alternative Corridor 16 poses the least potential impacts to wetlands. In addition, there are no proposed impacts to the Waccamaw Wildlife Refuge and potentially minor impacts to the Waccamaw River.

4.5 Subpart F: Potential Impacts on Human Use Characteristics

4.5.1 Municipal and Private Water Supplies

The Grand Strand Water and Sewer Authority (GSWA) is the major supplier of water for Horry County, and has two surface water treatment facilities. The majority of the area is supplied by the Bull Creek Treatment Plant, supplemented by Aquifer Storage and Recovery (ASR) wells located throughout the service areas. In addition to the ASR wells, water is stored in ground storage reservoirs and elevated tanks (SC Water Quality Report, accessed 2023). According to the South Carolina Watershed Atlas (accessed February 2023), Alternative Corridors 8 and 9 would have the least impacts to the Horry County Public Water Supply (PWS). Alternative Corridors 14 through 16 would have the second least impacts to the PWS.

4.5.2 Recreational and Commercial Fisheries

Boat ramps are located along the Waccamaw River and the Intracoastal Waterway, making these locations hot spots for recreational and commercial fisheries. Alternative Corridors 14 through 16 contain boat ramps and a fishing pier that have the potential to be affected during construction. The Savannah Bluff boat ramp, located 0.03 mile south of US 501 along the Waccamaw River, may be affected under Alternative Corridor 16. The SC 544 boat ramp is located along the Intracoastal Waterway, directly within the study area of Alternative Corridors 14 through 16. Additionally, a fishing pier is located adjacent to the SC 544 boat ramp and has potential to be impacted under Alternative Corridors 14 through 16.

Permanent impacts to these structures are likely and would need to be relocated to accommodate for the road widening along US 501 and SC 544. Temporary impacts would be localized to the vicinity of the bridges (direct and indirect), and due to their limited extent and duration, as well as the BMPs that would be implemented and maintained, these temporary impacts would have less than significant effects on fisheries within both waters.

4.5.3 Water-Related Recreation

Both the Waccamaw River and Intracoastal Waterway are state navigable waters that offer water-related recreation activities including paddleboarding, fishing, boating, and kayaking. As stated under the "Recreational and Commercial Fisheries" section, Alternative Corridors 14 through 16 contain boat ramps and a fishing pier along US 501 and SC 544 that may need to be relocated, thereby affecting water-related recreation associated with these structures. Additionally, only Alternative Corridors 14 through 16 have proposed to widen SC 544 over the Intracoastal Waterway.

Each of the build alternatives would cause temporary impacts to water-related recreation but Alternative Corridors 14 through 16 may result in the relocation and/or dismantling of several boat ramps and a fishing pier. Therefore, Alternative Corridors 1 through 13, all of which have all similar impacts on water-related recreation along only the Waccamaw River, may result in lowered permanent impacts to structures associated with water-related recreation.

4.5.4 Aesthetics

Segments of the project area offer expansive views of the pristine Waccamaw Wildlife Refuge, which is home to thousands of unique species. Such pristine wilderness covers thousands of acres of land that is untouched by human development. SCDNR and USFWS also maintain land surrounding this refuge which is also largely untouched. To construct through such beautiful and pristine land would certainly impact the aesthetics both temporarily and permanently.

Alternative Corridors 1 through 15 propose to construct across 1.5-2.42 miles of federal/state protected land whereas Alternative Corridor 16 would not construct through any protected land. Alternative Corridor 16 would widen existing roadways/bridges and therefore, would be the least impactful aesthetically.

4.5.5 Parks, National and Historic Monuments, National Seashores, Wilderness Areas, Research Sites, and Similar Preserves

The USFWS and SCDNR currently own land throughout the project area. Specifically, portions of these protected lands are classified as the Waccamaw Wildlife Refuge. Hunting, fishing, hiking, boat tours, kayaking, paddle boarding, bird watching, photography, and environmental education are some of the dozens of ways that the Refuge is utilized. Indirect effects due to the project would include noise, glare, and lighting from the proposed bridge and roadway. This may increase the mortality of wildlife due to high volumes of traffic. Populations may migrate or hibernate altogether. As stated in the "Aesthetics" section, Alternative Corridors 1 through 15 propose to construct across 1.5-2.42 miles of federal/state protected land whereas Alternative Corridor 16 would not construct through any protected land.

Parks and cemeteries that may also be affected include the Conway Dog Park (Alternative Corridor 16), Hillcrest Cemetery (Alternative Corridors 15 and 16), Singleton Cemetery (Alternative Corridors 14-16), and Swing Bridge Park (Alternative Corridors 14-16). Impacts to such features are anticipated to be minor take of right-of-way within the listed alternative corridors they are present within. Further analysis will be needed later in the design process.

Given the great environmental and human value of the Waccamaw Wildlife Refuge and the protected land surrounding it, Alternative Corridor 16 would be the least impactful.

4.6 Subpart G: Evaluation and Testing

4.6.1 Evaluation and Testing

Evaluation and testing have not been conducted for the proposed project. Horry County would follow the required procedure to ensure that no adverse impacts related to the deposit of fill material in WoUS would occur. All fill material deposited into WoUS would be evaluated for the presence of contaminants, and if the evaluation showed that the material was or could be contaminated, it would be tested for chemical, biological, and other contaminants before deposit. Contaminated material would not be deposited into WoUS (Caltrans, 2013).

The SELL project grading should have surplus cut material that can be used as fill to construct the project, so all suitable cut material would be used on-site for roadway fill, if possible. Widening and deepening of the channels along the Waccamaw River, Intracoastal Waterway, and other smaller tributaries would involve the removal of sediment by dredging. Dredge material would be removed from the channels with no more incidental fallback and would either be placed in upland areas in such a manner that there would be no return flow to WoUS or disposed of appropriately in an upland landfill with no possibility of return to WoUS. Moreover, any barge, scow, or similar vessel used to temporarily store and/or haul the dredged material would be operated in a manner that precludes the spilling or other release of dredged material back into WoUS. Therefore, no Section 404 discharge into WoUS would occur from the dredging, material handling or disposal from any of the build alternatives (Caltrans, 2013).

4.7 Cumulative Impacts Assessment

According to the Horry County Comprehensive Plan *Imagine 2040* (adopted December 2019), economic development centers are expected to increase along US 378 and US 17. Suburban areas are anticipated to experience the most exponential amount of growth located between SC 544 to US 17. Protected/preserved land surrounding the Waccamaw River is not forecasted to receive any development at this stage of County planning. Likewise, the area between the US 501/SC 22 interchange to just west of SC 544 and SC 707 still plan to remain largely rural. STIP projects planned within the project area include mostly rehab/resurfacing projects and operational/safety projects along and adjacent to US 378, US 501, SC 544, and Cates Bay Highway. Roadway widening along US 501 from SC 544 to SC 31 is currently recorded under two (2) STIP projects: STIP P032537/Construction Year 2023, and STIP P029061/Construction Year 2020.

Such proposed projects would expand on currently developed areas surrounding major roadways, particularly within the southern portion of Horry County. No development is forecasted within federal, or state protected lands along the Waccamaw River and much of the SELL study area between the US 501/SC 22 interchange to just west of SC 544 and SC 707 is forecasted to remain largely rural.

Alternative Corridor 16 proposes to widen these major roadways/bridges where increased economic and residential growth are predicted. Moreover, several STIP projects also reflect the proposed alternative 16 corridor to widen US 501. Therefore, cumulative impacts to visual/aesthetic resources, natural biological communities, water quality, and WoUS for these proposed projects by Horry County and SCDOT would be indiscernible if Alternative Corridor 16 is the preferred alternative. Impacts to such resources within Alternative Corridors 1 through 15 would likely be more pronounced due to the lack of growth anticipated by Horry County surrounding these corridors.

4.8 Subpart H: Actions Taken to Minimize Adverse Effects

4.8.1 Design Iterations and Wetland/Special Aquatic Site/Other Waters Impact Minimization Efforts

Many impacts to WoUS would be unavoidable due to the project size necessary to accomplish the purpose and need. An effort to minimize impacts is an objective of the design effort for each of the build alternatives. The following minimization efforts will be considered (Caltrans, 2013):

- To minimize impacts to sensitive habitats, roadway slopes will be designed at a steeper 2:1 grade where feasible.
- New or existing roadway profiles would be minimized to reduce the width and overall footprint of the roadway to minimize wetlands and right-of-way impacts.

- Wildlife corridors adjacent to the proposed bridge along the Waccamaw River, or suitably wide shoulders along the paved bridge to allow safe crossings for species local to the Waccamaw Wildlife Refuge and surrounding protected areas.
- Bike/pedestrian paths would be attached to the existing roadway/bridge structures where feasible directly over wetlands and streams, eliminating additional impacts to WoUS.
- Proper hydrology studies will be conducted to determine the optimum channel dimensions/cross-sections, combined with bridge lengths, and culvert/pipe/riprap impacts to optimize flood condition flows at each stream crossing with the least amount of impacts to WoUS.
- Auxiliary lanes will only be required at locations where SCDOT standards require them for traffic purposes.
- Walls and temporary concrete barriers will be proposed to reduce additional impacts to wetlands during staged construction.

4.8.2 Conservation Measures

The following conservation measures would be required for implementation of any of the sixteen (16) alternatives:

- Formal threatened and endangered species surveys will be conducted prior to construction to verify the presence or lack of species/suitable habitat.
- All removal of native vegetation or nonnative shrubs and trees within the impact areas would be completed outside of the bird breeding season (April-September), if possible, to avoid impacts to nesting birds. This is especially crucial within state/federal protected lands. Otherwise, a qualified biologist would thoroughly survey all vegetation during preconstruction surveys to ensure no nesting birds are on site. The SCDOT migratory bird procedure would be followed if nests are found.
- If pile driving is necessary for construction of bridge falsework and/or coffer dams for construction of cast-in-drilled hole bridge pilings, all pile driving near the Waccamaw River would be completed outside the bird breeding season to minimize construction noise impacts to resident bird species.
- Noise barriers would be installed at the edge of temporary impact areas near ESAs where feasible and reasonable. Noise walls would not be effective where fill slopes are significantly higher than the affected area.
- No more than 50% of navigable water channels will be blocked during construction, and temporary construction barges/mats will be utilized to prevent any permanent impacts.
- Coffer dams, silt curtains, and/or other barriers would be used around column construction in rivers to contain sediment and debris.
- All debris from the widening of existing bridges or construction of new bridges would be contained, so debris does not fall into rivers and streams.
- Sediment and erosion control measures, consistent with South Carolina Best Management Practices (BMPs), would be installed during construction of the project to prevent runoff and sedimentation to WoUS.
- No heavy machinery will operate within the channel and/or on the banks of streams beyond the limits of construction.

- Special care would be taken when transporting, using, and disposing of soils with invasive plant species. All heavy equipment would be washed and cleaned of debris before entering special aquatic sites.
- A qualified biologist would be made available for both the preconstruction and construction phases to review grading plans, address protection of sensitive biological resources, and monitor ongoing work. The biologist shall be familiar with the habitats, plants, and wildlife of the project area, and shall maintain communications with the resident engineer, to ensure that issues relating to biological resources are appropriately and lawfully managed.
- Cut slopes and temporary impact areas would be revegetated with native upland habitats with composition similar to those habitats within the Waccamaw Wildlife Refuge if and when feasible.
- If lighting for construction is used at night, it would be shielded and directed away from ESAs and limited to the minimum amount needed for work.
- In dredging of WoUS, no more than incidental fallback of dredged material would be allowed. Any barge, scow, or similar vessel used to temporarily store and/or haul the dredged material would be operated in a manner that precludes the spilling or other release of dredged material or the associated water back into waters of the U.S. Disposal of sediment either on the project site or offsite would be allowed only at sites with no possibility of return to waters of the U.S.

4.8.3 Compensatory Mitigation

Mitigation bank(s) with service areas located within the preferred build alternative would be utilized where impacts to WoUS would take place. In the absence of available mitigation banks or wetland and stream credits in the proposed area of impact, a Permittee-Responsible Mitigation (PRM) plan would be developed. A PRM is defined in 33 CFR 332 as “an aquatic resource restoration, establishment, enhancement and/or preservation activity undertaken by the permittee (or an authorized agent or contractor) to provide compensatory mitigation for which the permittee retains full responsibility.” This type of mitigation may also be referred to as “project-specific mitigation.” This form of mitigation would require approval by the USACE and other governmental agencies.

4.8.4 Funding

Funding is currently identified for environmental studies and right-of-way acquisition and funded by Horry County’s Road Improvement and Development Effort (RIDE) III program.

4.8.5 Preliminary LEDPA Identification and Consideration of Other Section 404 Discharge Requirements/Restrictions

Since the aquatic resource full avoidance alternatives are not practicable, and because each of the SELL build alternatives would result in some aquatic resource loss, the practicable alternative with the least damage to aquatic resources must be identified as the LEDPA, unless it has other significant adverse environmental consequences. Based on preliminary analysis and as discussed in detail in Chapters 3 and 4, the alternative with the lowest environmental impacts appears to be Alternative Corridor 16. The LEDPA must be a reasonable and practicable alternative and must be considered in the alternatives screening process. At this point in the project process, 16 conceptual alternatives have been proposed and impacts have been estimated. Following a detailed tiered alternatives screening to determine if the alternatives meet the project purpose and need, a LEDPA can be recommended.

SOUTHERN EVACUATION LIFELINE (SELL)
MITIGATION NEEDS ANALYSIS

1.0 INTRODUCTION

1.1 The Proposed Project

The Southern Evacuation Lifeline ("SELL" or "SELL Project" or "Project") is a proposed 28-34 mile long, limited-access roadway in Horry County, South Carolina designed to provide the region with congestion relief and improved hurricane evacuation. The proposed roadway, on a mix of existing and new alignments, conceptually would allow a more direct route west from the southern Grand Strand. The SELL Project would ultimately connect with SC 22 and US 501 west of Conway to North Myrtle Beach. A secondary need for the SELL Project is to generally improve east and west access across the Waccamaw River.

1.2 Purpose of this Mitigation Needs Analysis

The intent of this report is to better understand the potential for compensatory mitigation within the Project study area. Due to the complexity and magnitude of the Project, the sponsor is evaluating major elements of the Project to assess feasibility, costs and scheduling. A full analysis, including additional options and public involvement would be completed if the Project progresses. Thus, this report provides a preliminary evaluation based on range of conceptual alternatives identified at this time. These alternatives have not yet been fully assessed. Screening analysis and consideration of all reasonable and practicable alternatives will occur at a later date. A full assessment of avoidance, minimization and/or mitigation related to potential Project impacts would be developed following the identification of reasonable alternatives. This report is not intended to serve as a decision document for any portion of the Project but is for information and planning purposes.

2.0 REGULATORY BACKGROUND

The Project is anticipated to result in impacts to Waters of the United States "WOTUS" under the jurisdiction of the U.S. Army Corps of Engineers ("USACE") as regulated by Section 404 of the Clean Water Act ("CWA") and Section 10 of the Rivers and Harbors Act. Mitigation credit availability outlined in this report is based on the Charleston District USACE 2010 Compensatory Mitigation Guidelines. Compensatory mitigation means the restoration (re-establishment or rehabilitation), establishment (creation), enhancement, and/or in certain circumstances preservation of aquatic resources for the purposes of offsetting unavoidable adverse impacts which remain after all appropriate and practicable avoidance and minimization has been achieved (33 CFR §332.2).

2.1 National Environmental Policy Act

The National Environmental Policy Act ("NEPA") provides a standard framework when planning construction and development projects that require federal and state permits and certifications. This framework includes reviews that consider the potential impacts on the environment by proposed actions. For transportation projects, such as the proposed SELL Project, there is a process to evaluate potential impacts as well as requirements for documentation of decisions resulting from that process. The key elements of the process include coordinating with relevant agencies and involving the public. Overarching objectives include the following components involving any proposed project:

- Purpose and need,
- Range of alternatives that are considered,
- Potential environmental impacts of the alternatives,
- Selection of a *preferred alternative*, which includes the unavoidable impacts after avoiding and minimizing environmental impacts to the greatest degree possible,
- Need for compensatory mitigation for unavoidable impacts, and
- Documentation of the analysis and decisions through an environmental impact statement, an environmental assessment, or a categorical exclusion supported by the administrative record.

2.2 The 2008 Mitigation Rule

In 2008, the U.S. Environmental Protection Agency and USACE jointly promulgated regulations revising and clarifying requirements regarding compensatory mitigation. Under the regulations, known as the 2008 Mitigation Rule ("Rule" or "2008 Rule") there are three mechanisms for providing compensatory mitigation, listed below in order of preference as established by the Rule and known as the mitigation hierarchy:

1. Commercial or single-purpose mitigation banks,
2. In-lieu fee programs, and
3. Permittee-responsible mitigation ("PRM").

A fourth mitigation approach has been utilized for projects in South Carolina where impacts are large and cannot be satisfied by credits purchased from a single, or multiple mitigation banks or a single PRM. This mitigation approach is a hybrid of using both mitigation bank credits and PRM. Therefore, this analysis of compensatory mitigation for the SELL Project focuses on use of mitigation bank credits, PRM and the hybrid approach of using both mitigation bank credits and PRM.

2.3 Compensatory Mitigation for Unavoidable Impacts

When a preferred alternative is selected for SELL, and the adverse impacts to wetlands, streams and other aquatic resources have been determined to have been avoided and minimized to the extent practicable, federal law and regulation will require compensatory mitigation for every authorized or permitted discharge or fill into wetlands or alteration of streams. Such compensatory mitigation is required to replace the loss of wetland and aquatic resource functions in the watershed. Compensatory mitigation refers to the restoration, establishment, enhancement, or in certain circumstances preservation of wetlands, streams and/or other aquatic resources for the purpose of offsetting unavoidable adverse impacts. Compensatory mitigation for unavoidable wetland impacts typically is accomplished through distinct mechanisms in South Carolina, including the use of credits from mitigation banks and PRM, with both methodologies meeting the intent of the 2008 Rule (33 CFR Parts 325 and 332 and 40 CFR Part 230). Mitigation banking is a form of third-party compensation, where the liability for project success is transferred to the mitigation bank sponsor. With PRM, the permittee maintains liability for the construction and long-term success of the site.

- Mitigation Banking: This compensatory mechanism consists of a wetland and/or stream area that has been restored or enhanced and preserved, which is then set aside to compensate for future impacts to wetlands or streams related to development activities including roadway construction. Permittees, upon approval of regulatory agencies, can purchase credits from a mitigation bank to meet their requirements for compensatory mitigation. The value of these credits is determined by quantifying the wetland functions and wetland or stream units (acres or linear feet) restored or enhanced. The bank sponsor is ultimately responsible for the success of the project. Mitigation banking is performed off-site, meaning it is at a location not on or immediately adjacent to the site of impacts, but typically within the same or an adjacent watershed. Federal regulations establish a preference for using credits from a mitigation bank over other compensatory mechanism because aquatic resources on mitigation banks have been restored or enhanced, in most cases, prior to impacts; this is identified as one of the primary reasons mitigation bank credits are preferred over PRM.
- In-Lieu Fee Programs: The Charleston District of USACE, to date, has not approved use of in-lieu fee programs in South Carolina.
- Permittee-Responsible Mitigation: This compensatory mechanism includes restoration, enhancement and/or preservation of wetlands undertaken by a permittee to offset for wetland impacts resulting from a specific project. The permittee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of the mitigation. PRM may occur at the site of the permitted impacts or at an off-site location, preferably within the same watershed. PRM has a history of use within South Carolina, particularly where the impacts associated with a given project are considered to be unusually large in scope and scale making it difficult to quantify the impacts and associated mitigation using the standard methodologies of the USACE Charleston District Standard Operating Procedure ("SOP"). Use of PRM in South Carolina often is based on lack of available mitigation banking credits or approved mitigation banks in certain watersheds.

3.0 LANDSCAPE-SCALE MITIGATION

A landscape-scale approach should be used when developing and approving mitigation strategies or plans, reviewing projects, or issuing permits when the scope and scale of a proposed project affect the environment with landscape-scale impacts. This approach identifies the needs and baseline conditions of targeted resources and their values, services and functions, reasonably foreseeable impacts, cumulative impacts of past and likely projected disturbance to those resources and future disturbance trends. The approach then uses such information to identify priorities for avoidance, minimization and compensatory mitigation measures across a given area to provide the maximum benefit to the impacted resources and their values, services, and functions, with full consideration of the conditions of additionality and durability. Landscape-scale mitigation has been incorporated into permitting decisions in South Carolina both prior to, and after the adoption of the 2008 Mitigation Rule. Landscape-scale mitigation allows applicants and regulators to utilize the flexibility of the 2008 Rule as given to the USACE District Engineer to consider the value of a greater preservation value related to a particular mitigation plan. Landscape-scale mitigation can be in the form of using mitigation bank credits where the mitigation bank itself has been sited using landscape-scale criteria, or through the use of PRM where the same criteria of connectivity and scale are employed.

According to the 2008 Mitigation Rule, preservation may be used to provide compensatory mitigation for activities authorized by USACE permits when all the following criteria are met:

1. The resources to be preserved provide important physical, chemical, or biological functions for the watershed,
2. The resources to be preserved contribute significantly to the ecological sustainability of the watershed. In determining the contribution of those resources to the ecological sustainability of the watershed, the district engineer must use appropriate quantitative assessment tools, where available,
3. Preservation is determined by the district engineer to be appropriate and practicable,
4. The resources are under threat of destruction or adverse modifications,
5. The preserved site will be permanently protected through an appropriate real estate or other legal instrument (e.g., easement, title transfer to state resource agency or land trust), and
6. Where preservation is used to provide compensatory mitigation, to the extent appropriate and practicable the preservation shall be done in conjunction with aquatic resource restoration, and/or enhancement activities. This requirement may be waived by the district engineer where preservation has been identified as a high priority using a watershed approach, but compensation ratios shall be higher.

It is anticipated that SELL Project stakeholders will assert that the proposed impacts associated with the Project are potentially so significant that a landscape-scale approach that embraces the flexibility of extraordinary opportunities for greater preservation should be considered, and used, if possible, to compensate for unavoidable wetland and stream impacts when they are identified as such. Impacts associated with a single project that meet or exceed the threshold of 100 acres of wetlands impact may be quantified as *significant* when considering the cumulative impacts associated with all permits issued by the Charleston District rarely exceed that number in a given calendar year, and thus, *significant* is not an arbitrary descriptive term. The decision to recommend a landscape-scale approach also needs to be based on threat level in the watershed and benefits to the ecosystem by implementing such a mitigation plan; the threat level to remaining aquatic resources in the watershed of impact are undeniably high as it is identified as one of the fastest growing regions in the nation.

The landscape-scale approach could be utilized by use of commercial mitigation banking credits, provided a mitigation bank or combination of banks could provide the scope and scale of necessary credits and preservation of aquatic resources or through a PRM plan. It is possible to craft a mitigation plan with a combination of conventional mitigation bank credits supplemented by a PRM plan particularly in a watershed where mitigation bank credits are limited or unavailable. Also, use of a PRM plan, either standing alone or in combination with acquisition of mitigation bank credits, should incorporate sufficient wetland and stream restoration and enhancement to meet the watershed needs criteria and landscape-scale connectivity to already protected aquatic resources and buffers.

4.0 ALTERNATIVES AND IMPACT ANALYSIS

Planners have performed a preliminary analysis of various alternatives alignments for SELL that cover a mix of new and existing roadways. The complete combination of alternatives must consider practicality and reasonability, as well as assurance that the level of analysis of alternatives is commensurate with the level of impacts, scale and cost of the proposed Project. From the impact to WOTUS standpoint, the 16 SELL Project conceptual alignments selected for consideration are summarized in Table 1. Table 2 summarizes the minimum, maximum, average and median stream and wetland impacts considering all alternatives. Data in Table 2 presents the range of potential Project impacts and can be valuable to preliminarily estimate the scope and scale of compensatory mitigation that will be needed for the Project to receive necessary regulatory permits and certifications.

Table 1. Wetland and stream impacts for SELL Project alignment conceptual alternatives.

Alternative Identification	Wetland (Acres)	Stream (Linear Feet)	Open Water (Acres)
1	277.7	9,876	0.7
2	278.4	10,848	2.7
3	319.8	13,825	0.7

9	266.0	4,343	6.2
10	286.1	7,594	0.5
11	287.7	7,594	1.2
12	286.9	8,566	2.4
13	288.5	8,566	3.2
14	132.1	3,549	3.0
15	108.4	4,343	2.5
16	43.5	3,648	0.6

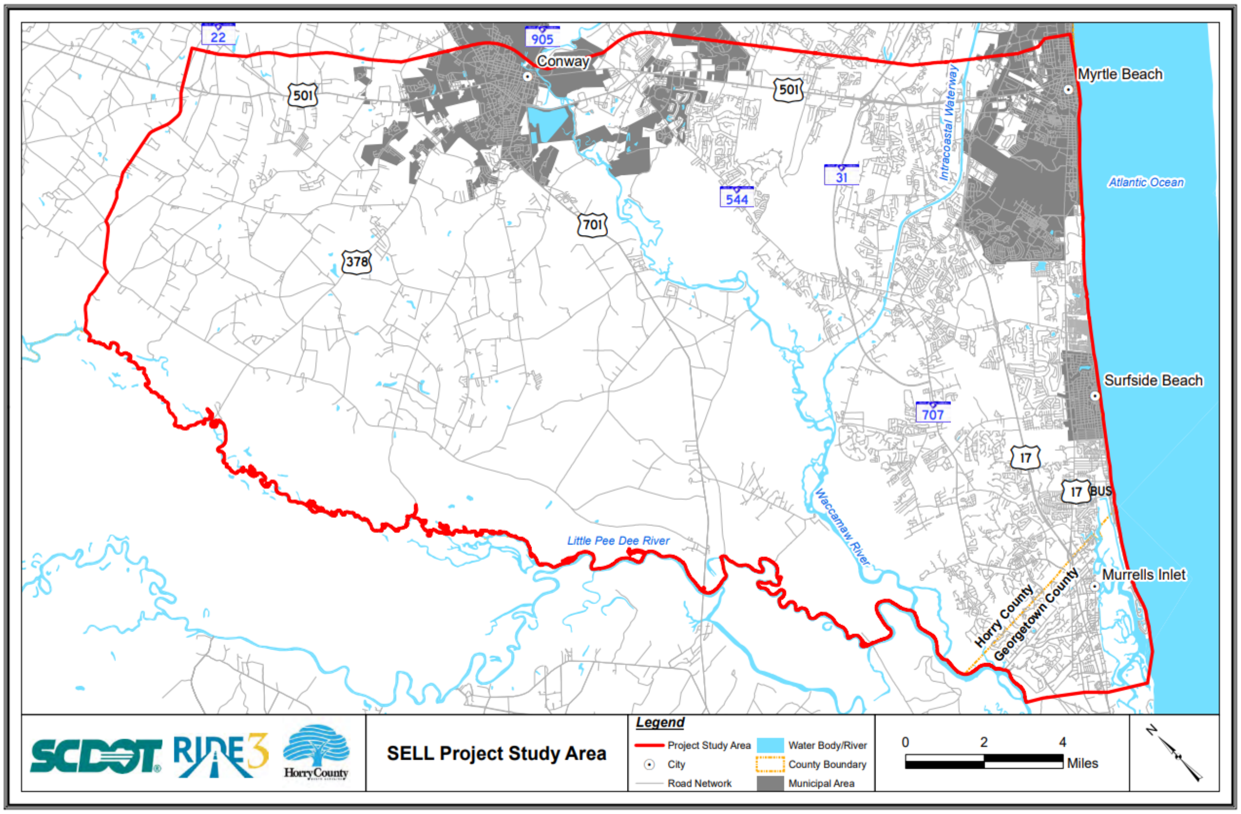
Table 2. Minimum, maximum, average, and median stream and wetland impacts considering all SELL alignment conceptual alternatives.

Minimum Wetland Impacts	Minimum Stream Impacts	Minimum Pond Impacts
Alternative 16	Alternative 14	Alternative 16
43.5 acres	3,549 linear feet	0.6 acres
Maximum Wetland Impacts	**Maximum Stream Impacts**	**Maximum Pond Impacts**
Alternative 3	Alternative 4	Alternative 7
319.8 acres	14,797 linear feet	5.7 acres
Average Wetland Impacts	**Average Stream Impacts**	**Average Pond Impacts**
245.3 acres	9,006 linear feet	2.5 acres
Median Wetland Impacts	**Median Stream Impacts**	**Median Pond Impacts**
272 acres	8,566 linear feet	3 acres

5.0 THE PROPOSED PROJECT STUDY AREA

The SELL Project study area includes southern Horry County and a small portion of northeastern Georgetown County along the north coastal plain of South Carolina (Figure 1). The study area runs from the southern incorporated area of Murrells Inlet west to the Waccamaw River and thence west northwest along the Waccamaw and Great Pee Dee rivers to the confluence of the Great Pee Dee and Little Pee Dee rivers, and thence northwest up the Little Pee Dee River to the Jordanville Community and thence up Pee Dee Road South (S-26-97) and beyond before paralleling US 501 east back to and through Conway. The Project study area encompasses four eight-digit watersheds, from east to west, that include the Coastal South (03040208), the Waccamaw River (03040206), the Lower Pee Dee River (03040207) and the Little Pee Dee River (03040204). All four watersheds are part of the Pee Dee River Basin. The Project study area is located within Environmental Protection Agency's Middle Atlantic Coastal Plain Level III Ecoregion. The study area to the west is primarily rural in character with upland forest and agricultural lands interlaced with low-lying riverine drainages. Vegetation community types vary throughout this part of the study area and consist primarily of natural and managed pine forests, forested and emergent tidal and nontidal wetlands, pasture and agricultural fields. East of the Waccamaw River, the study area becomes increasingly more developed moving toward US 17 and the communities of Murrells Inlet, Socastee, Surfside Beach and Myrtle Beach, and it is bisected by numerous existing roads, golf courses, residential developments, commercial and resort sites. Notable landscape features within the study area include several Wildlife Management Areas titled to South Carolina Department of Natural Resources ("SCDNR") as well as the Waccamaw National Wildlife Refuge ("NWR" or "Refuge") primarily titled to and entirely managed by the United States Fish and Wildlife Service ("USFWS"). The study area crosses the Waccamaw River, borders the Great Pee Dee and Little Pee Dee rivers and includes numerous smaller streams, tidal and nontidal wetland and open water habitats. Aquatic resources occurring within the corridor include aquatic beds, bay forests, bottomland hardwoods, deciduous shrub swamps, freshwater marshes, pine wet flatwoods, ponds, borrow pits, rivers, canals and wooded swamps.

Figure 1. SELL Project study area.



Aquatic habitats within the study area include black and red water river floodplain forests with canopies of bald cypress (*Taxodium distichum*), swamp tupelo (*Nyssa biflora*) and red maple (*Acer rubrum*). Other species commonly associated include tulip poplar (*Liriodendron tulipfera*), sweet gum (*Liquidambar styraciflua*), pond pine (*Pinus serotina*), loblolly pine (*P. taeda*), laurel oak (*Quercus laurifolia*), water oak (*Q. nigra*) and willow oak (*Q. phellos*). Floodplain forests are diurnally inundated by tides and seasonally flooded by precipitation and downstream flow of Great Pee Dee, Little Pee Dee and Waccamaw rivers. The shrub-scrub habitats in areas subjected to more frequent flooding can be open, whereas areas with infrequent flooding are dense and Poccosin-like. Riverine bottomland hardwood forests occur between the river and slightly higher, drier upland sites. Unlike floodplain forests and longleaf pine (*P. palustris*) uplands, bottomland hardwoods are quite diverse in terms of the number of overstory species. This ecotype is dominated by a well-developed canopy of water oak, over-cup oak (*Q. lyrata*), willow oak, sweetgum, water hickory (*Carya aquatica*) and loblolly pine. Bottomland hardwood forests are inundated regularly by riverine flooding, but do not typically contain standing water for extended periods of time. When drier conditions occur, a more robust herbaceous understory community can develop where sunlight permits.

The most significant landforms within the study area are geomorphic features including oxbow lakes, sloughs, braided streams, and other fluvial formations, such as high sand ridges and ancient interdune sloughs on Sandy Island, that have been created by wind and the river within the floodplain. Oxbow lakes often are associated with floodplain forests where sections of the main-stem stream have become isolated due to river channel movement within the floodplain. The elevated, xeric sand ridges of Sandy Island and other sand ridge sites within the study area run mostly parallel to the rivers throughout the floodplain. This ecosystem is associated with fluvial sand deposited by river currents and blown by wind. The soils are sandy and well drained. Longleaf and sparse loblolly pine dominate the canopy. The mid-story consists primarily of turkey oak (*Q. laevis*), sand live oak (*Q. virginiana var. germinata*) and persimmon (*Diospyros virginiana*). Common understory plants include wiregrass (*Aristida stricta*), dropseed (*Sporobolus* spp.), and prickly-pear (*Opuntia compressa*). These are relatively fragile and unusual ecotypes due to wetlands, between high ridges, that can approach sea level particularly on Sandy Island; protection of these ridges is essential to the health of the overall riverine corridor.

Uplands throughout the study area west of the Waccamaw River are characterized by relatively flat topography interspersed with isolated wetlands and drained by linear, braided stream systems forming swamps ultimately connected to the riverine floodplains. Farming and timber management is the typical land use on uplands. These areas tend to exhibit a slightly higher percentage of hydrophytic vegetation but lack hydric soil and hydrology indicators associated with wetlands.

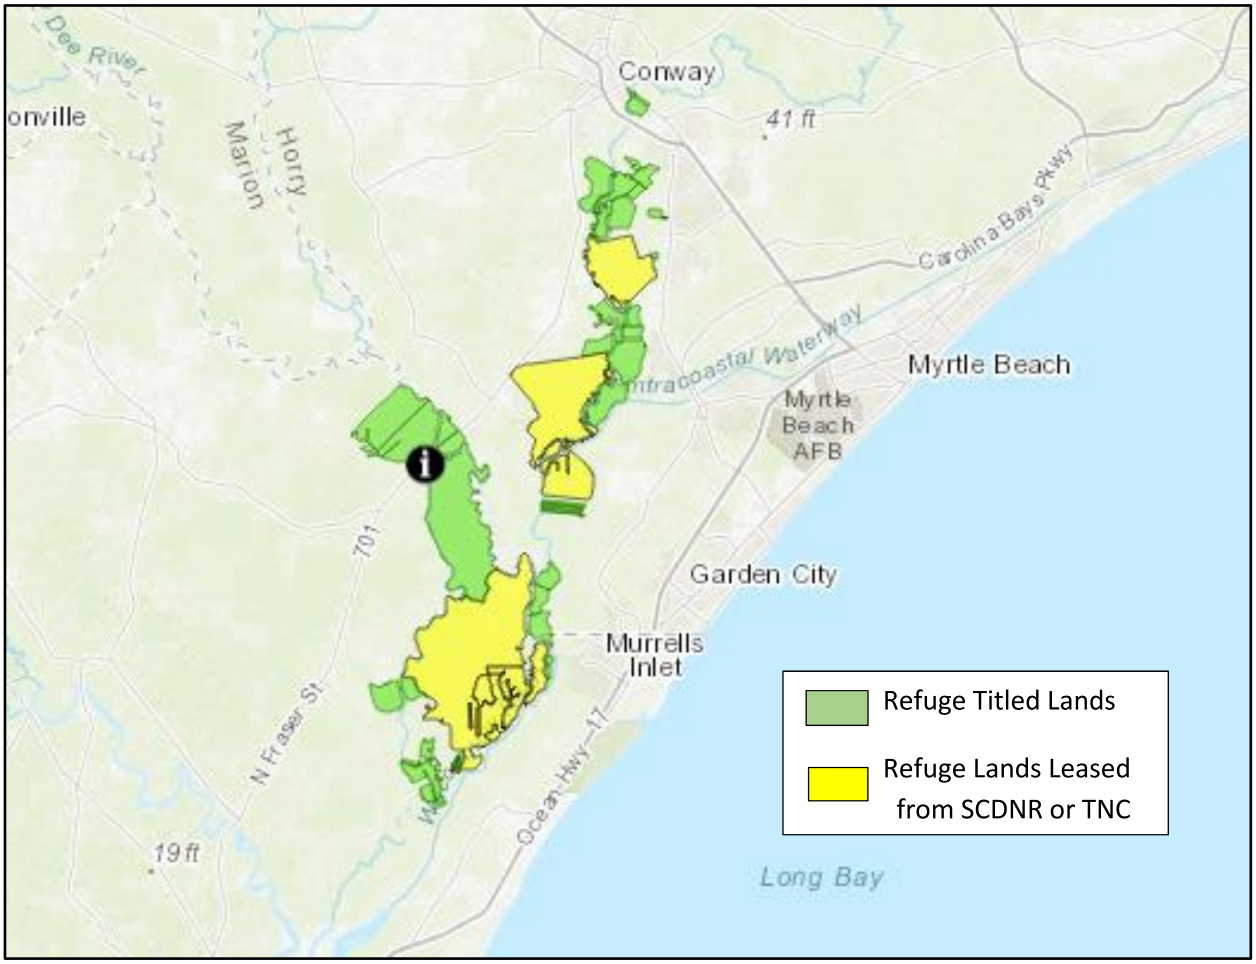
6.0 THE WACCAMAW NATIONAL WILDLIFE REFUGE

The SELL Project, if permitted through any of the proposed 16 alternatives would have some level of impact through already protected lands and waters, particularly for the Waccamaw NWR (Figure 2). Impacts could range from high to very high due to the need for the roadway to cross the Waccamaw River which is an integral part of adjacent refuge acreage, management and use.

The Waccamaw NWR was established on December 1, 1997 to protect and manage diverse habitat components within the local coastal riverine ecosystems for the benefit of endangered and threatened species, freshwater and anadromous fish, migratory birds and forest wildlife, including a wide array of plants and animals associated with bottomland hardwood habitats; and to provide a variety of wildlife-dependent recreational activities including hunting, fishing, wildlife observation, photography and environmental education. Located in portions of Horry, Georgetown, and Marion counties, the acquisition boundary for Waccamaw NWR spans approximately 55,000 acres and includes large sections of the Waccamaw and Great Pee Dee rivers and a small section of the Little Pee Dee River. There is an active land acquisition program from willing sellers within the boundary. Presently Waccamaw NWR encompasses nearly 29,000 acres.

Habitat within the acquisition Refuge boundary includes 6,166 acres of upland forest, located primarily on Sandy Island, and the remaining balance made up primarily of jurisdictional wetlands. The wetland diversity of this Refuge is what sets it apart from most others along the East Coast. Wetland habitats range from historic,

Figure 2. The Waccamaw National Wildlife Refuge.



broken and actively managed tidal ricefields, to black-water and alluvial flood plain forested wetlands of the Waccamaw and Great Pee Dee rivers. These tidal freshwater wetlands are some of the most diverse freshwater wetland systems located in North America and they provide many important habitats for migratory birds, fish, and resident wildlife. Species such as the swallow-tailed kite, osprey, wood stork, white ibis, prothonotary warbler, and many species of waterfowl can be observed on the Refuge. Additionally, these uplands and wetlands play a critical role in the filtration and stormwater retention of the primary drinking water resource for the greater Grand Strand region.

7.0 MITIGATION ALTERNATIVES

Three mitigation alternatives for the SELL Project are considered herein: Conventional mitigation banking or a robust PRM plan or a hybrid approach utilizing both purchase of mitigation banking credits and a well-developed PRM plan.

Use of existing or proposed mitigation banks: Several approved and proposed commercial mitigation banks have service areas within the watersheds of potential impact as related to the SELL Project. Table 3 lists approved, pending, or conceptual mitigation banks in the potential watersheds of impact. The impacts of projects of the scope and scale of SELL do not compute well with the Charleston District SOP. Doing so will fail to properly compute adequate mitigation. In fact, this disclaimer is listed in the Charleston District SOP. Despite this, use of credits from conventional mitigation banks should be considered in any mitigation analysis for the SELL Project. The following provides a summary of existing, pending and conceptual mitigation banks in the watersheds of potential impact for the SELL Project. This information is derived from the Regulatory In-lieu Fee Bank Information Tracking System, the USACE mitigation banking database, as well as contact with agents for the existing, pending and conceptual mitigation projects. The credit availability of existing mitigation banks could be subject to correction due to delay in keeping the ledger of each mitigation bank up to date.

Table 3. Mitigation banks approved, pending approval, or known to be conceptual within the watersheds potentially impacted by the SELL Project.

Mitigation Bank	Agent	Watershed	Status	Wetland Credit Availability	Wetland Credit Potential	Stream Credit Availability	Stream Credit Potential
Vandross Bay	Newkirk Environmental	Lower Pee Dee	Approved	0.3115	0	0	0
Waccamaw	EBX/Waccamaw	Waccamaw	Approved	339.61	0	0	0
Carter Stilley	American Mitigation	Waccamaw	Approved	918.11	284.42	22,618.24	7,777.11
Carter Stilley II	American Mitigation	Waccamaw	Conceptual	0	0	0	0
Cowpen	American Mitigation	Waccamaw	Pending	0	0	0	0
Independent	Resource Environmental Solutions	Waccamaw	Pending	0	0	0	0

1. Vandross Bay Mitigation Bank was the first commercial mitigation bank approved in South Carolina, in 1994, and it is virtually sold out of credits with no remaining wetland credits to be issued. This bank was not approved for stream credit availability.
2. Waccamaw Mitigation Bank has approximately 340 approved wetland credits, and all potential credits have been issued. This bank was not approved for stream credit availability.
3. Carter Stilley Mitigation Bank has approximately 918 wetland mitigation credits available and expects to have approved approximately 284 additional wetland credits in the future. This bank also has approximately 22,618 stream credits available and expects to have approved approximately 7,777 additional stream credits in the future.
4. Carter Stilley Mitigation Bank Phase II is conceptual and has not been submitted for review by the USACE coordinated Interagency Review Team ("IRT"). Carter Stilley Phase II is an approximately 1,659-acre tract located in Horry County, SC within the Waccamaw watershed (HUC 03040206) within the Middle Atlantic Coastal Plain. The Waccamaw River is less than a

half-mile south of the established property boundary. The proposed mitigation site on the tract is approximately 1,537 acres. The site abuts the SCDNR Waccamaw Heritage Preserve and is immediately adjacent to the Carter Stilley Wetland and Stream Mitigation Bank. Simpson Creek flows through the eastern side of the property and connects to the Waccamaw River. An un-named tributary flows from a large Carolina Bay to Simpson Creek. The channel has been straightened and emanates from ditches that were previously constructed within the Carolina Bay. Anticipated mitigation credit potential includes 723 wetland preservation credits, 970 wetland enhancement credits, 5,115 stream preservation credits and 10,043 stream restoration credits. This tract could be utilized for a component of a larger PRM plan for the SELL Project according to the agent for the landowner. SCDNR would be the most appropriate long-term steward.

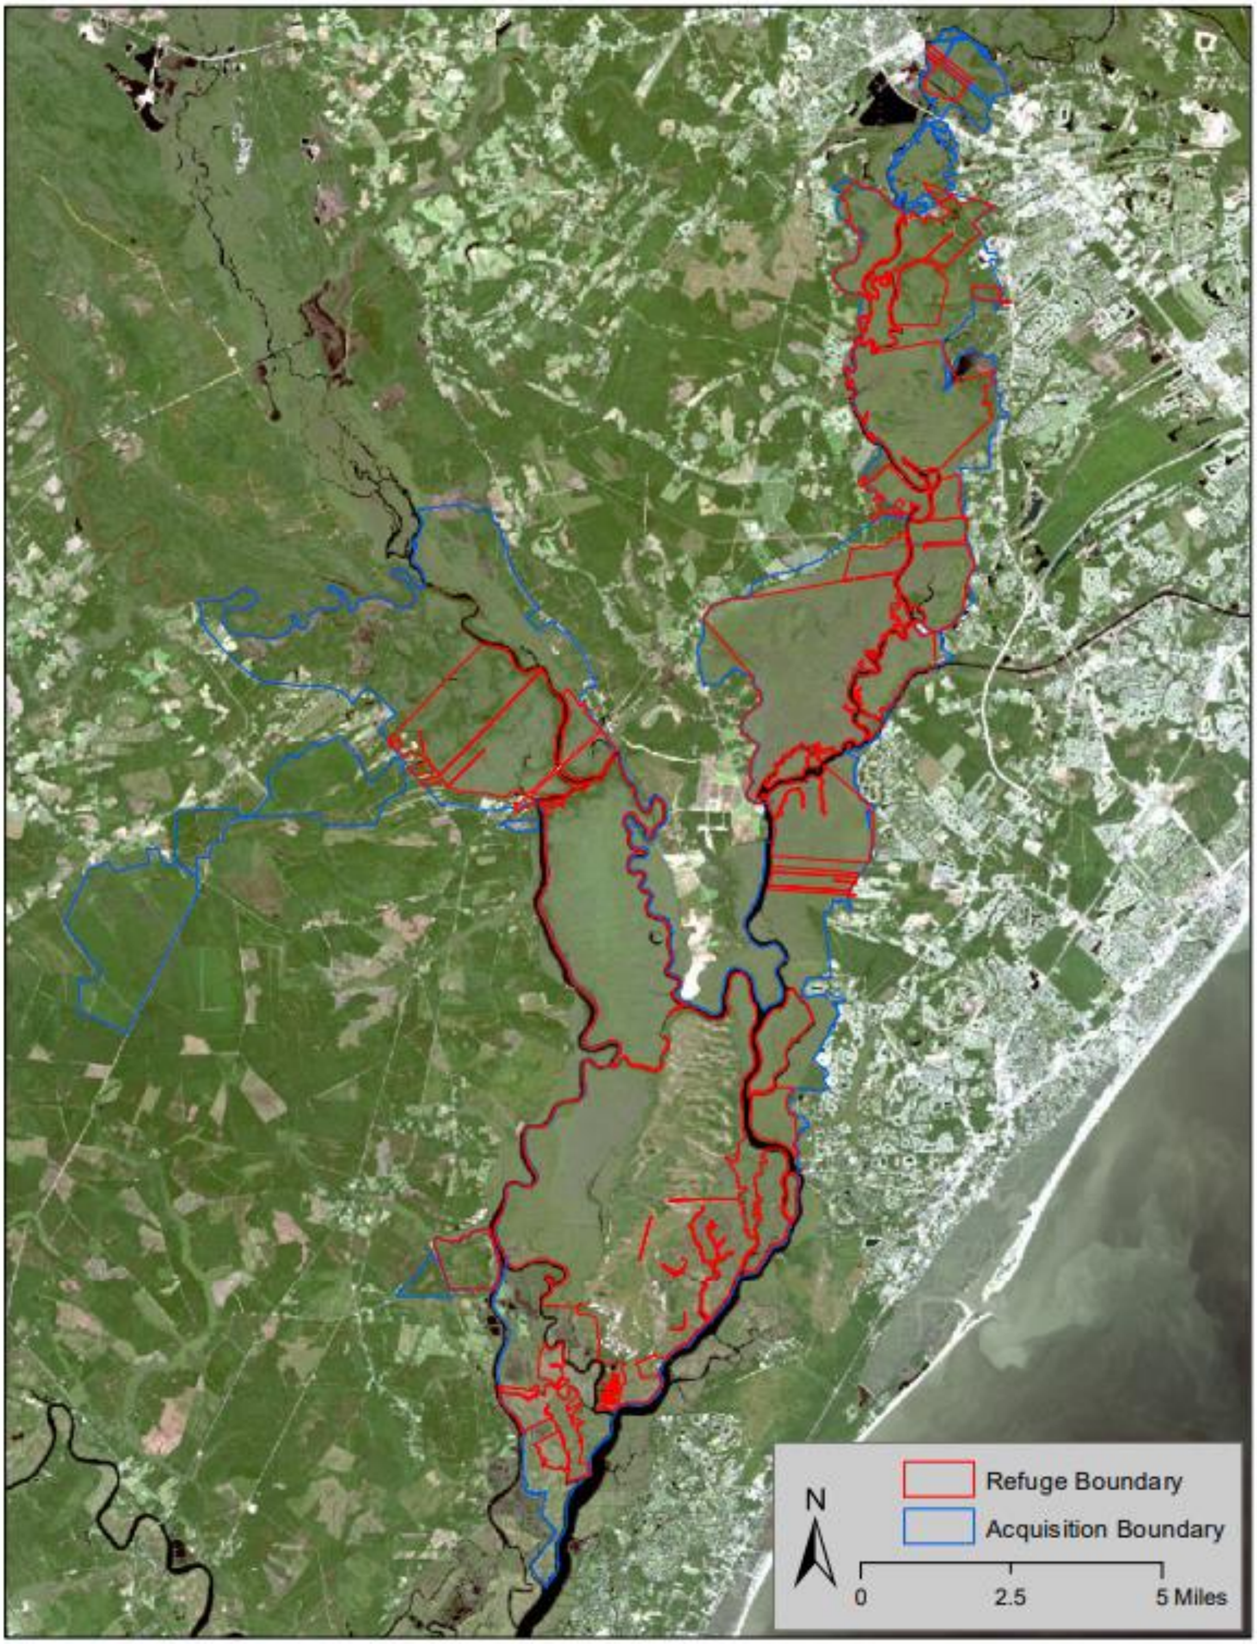
5. Cowpen Mitigation Bank has been proposed and is being evaluated by the USACE coordinated IRT. The proposed Cowpen Mitigation Bank is located on a 1,387.14-acre tract in Horry County near Longs, South Carolina. The site is bordered by the Long Bay Golf Club to the southeast and Hemingway Road to the north and is located within Waccamaw River watershed (HUC 03040206) within the Middle Atlantic Coastal Plain. The majority of aquatic resources on site hydrologically connect with the Waccamaw River through Cowpen Swamp and Simpson Creek, the remainder of on-site wetlands connect to the Waccamaw River though Buck Creek. Today, much of Cowpen Swamp, Simpson Creek and Buck Creek have been channelized. The site includes 1,360.12 acres of impaired to fully functional jurisdictional freshwater wetlands and numerous manmade drainage ditches throughout the site. This tract could be utilized for a component of a larger PRM plan for the SELL Project according to the agent for the landowner. SCDNR would be the most appropriate long-term steward.
6. Independent Republic Mitigation Bank has been proposed and is being evaluated by the Corps coordinated IRT. The site is immediately adjacent to the SCDNR Lewis Ocean Bay Heritage Preserve. The proposed project consists of establishing a freshwater mitigation bank in the Waccamaw watershed (HUC 03040206) located in the Lower Coastal Plain Ecoregion. The proposed 3,707.6-acre-acre mitigation site includes approximately 3,264.9 acres of wetlands. The proposal is to enhance 2,233.0 acres of predominantly wet pine savannah wetlands by re-initiation of prescribed burning to enhance the biotic integrity of rare wetland systems and associated plant communities. When prescribed burning is unavailable, mechanical or chemical treatment is proposed until fire can be re-introduced to the system. The remaining 964.7 acres of fully functional wet pine savannah, Carolina Bay, and non-alluvial swamp forest which are ineligible for prescribed burning will be preserved and buffered. According to the agent for the proposed mitigation bank, SCDNR is the proposed long-term steward with anticipation of incorporating the mitigation bank, once approved, into the Heritage Trust program. The agent for the proposed mitigation bank indicates the sponsor, Horry County, intends to complete the mitigation banking

instrument and utilize approved credits for the sponsor's own needs, and would not consider utilizing the site for a PRM plan to satisfy the SELL Project.

Permittee-responsible mitigation: Due to the prominence of the Waccamaw NWR and the likelihood of impacts to the Refuge, one method of compensatory mitigation for unavoidable impacts for the SELL Project, once determined, would be to craft a PRM plan that would add to the Refuge acreage and complement its goals and objectives including the provision of public use opportunities for traditional uses such as hunting, fishing, wildlife and fisheries management and nature study. To develop this concept, land ownership within and overlapping the Refuge acquisition boundary was examined. The landownership patterns were partitioned in accordance with the overall shape of the refuge and its complimentary acquisition boundary. The Refuge has the general shape of the letter "Y" with the upper left arm of the Y ascending northwest along the Great Pee Dee River, the upper right arm of the Y ascending north along the Waccamaw River, and the base of the Y descending southwest along the delta of the Waccamaw and Pee Dee rivers. The Waccamaw NWR acquisition boundary is depicted in Figure 3. Tables 4-9 contain landowner names, parcel identification and acreages of parcels overlapping the Refuge acquisition boundary. These parcels conceptually are available for acquisition from willing landowners and later inclusion into a PRM plan for the SELL Project. Use of any identified parcels is subject to further consideration and site visits to determine suitability for wetland and stream restoration and enhancement and to document preservation value, that all must precede any property negotiations.

Computation of necessary mitigation for stream and wetland impacts when using PRM for a Project like SELL typically can utilize ratios of impacts to wetland preservation and total preservation as a measure of quantification. While USACE has no guidance on use of ratios, past projects of large scope and scale permitted by the Charleston District USACE such as those permitted under the Sandy Island model, and those thereafter including, but not limited to, Vaught Aircraft, Nucor Steel, Boeing, Volvo, Haile Gold Mine and I-73 have depended on the Corps Charleston District Engineer's discretion to use the language now in the Mitigation Rule to help determine what are the appropriate PRM wetland, buffer and total preservation ratios. The ratios between total preservation and wetland impact have ranged from 60:1 for Sandy Island and related South Carolina Department of Transportation ("SCDOT") construction projects, to 29:1 for I-73, the most recently permitted large-scale impact SCDOT project, which impacted 212 acres of wetlands and resulted in the preservation of the 6,180-acre Gunter's Island PRM plan. Landscape scale mitigation projects permitted in South Carolina by the Corps Charleston District in the last decade, such as for Boeing, Haile Gold Mine and Volvo, all have had total preservation to impact ratios of ±30:1. Therefore, a ratio ±30:1 has become a standard for total preservation to impact in South Carolina and can be defended as being a consistent ratio used to issue permits and certifications for large-scale projects relying on PRM plans. A useful and complimentary approach to quantification of impacts to proposed mitigation is the ratio of preserved wetland and wetland/stream buffer

Figure 3. The Waccamaw National Wildlife Refuge and its acquisition boundary.



to impacts. An examination of the Boeing, Haile Gold Mine and Volvo mitigation projects have had a preserved wetland and buffer ratio of +15:1, and this ratio can also be defended as being consistent with previous permitting decisions for projects with significant impacts to WOTUS. Smaller ratios of wetland and wetland buffer preservation to impacts could be considered but should be based on the ecological value and imminent threats of the proposed mitigation site(s) and the needs of the watershed.

Table 4 lists the potential mitigation tracts of highest value for the SELL Project. These are in Horry County, north of existing Refuge lands along the Pee Dee River and Bull Creek. When using the average conceptual impact acreage of the SELL Project, 245 acres (refer to Table 2), these tracts, considered together, provide a preservation to impact ratio of 32:1 and an estimated preservation of wetlands and buffer ratio of ±19:1. A mitigation package of this size produces a favorable comparison to the I-73 mitigation package, meets the landscape-scale criteria and the USACE District Engineer's criteria outlined in the 2008 Rule regarding preservation for compensatory mitigation. These tracts also have excellent wetland and stream restoration and enhancement potential adding to the robust preservation value. Furthermore, a PRM crafted to include these tracts is likely to achieve maximum stakeholder support for the SELL Project. Restoring and buffering the wetlands on the Grand Strand Water and Sewer Authority parcels would have significant water quality benefits to the Great Pee Dee River, Bull Creek and Waccamaw River by eliminating the leaching of effluent constituents into those waterbodies. The likelihood of acquiring this acreage would depend on the cooperation of Horry County officials to negotiate a package that would satisfy Grand Strand Water and Sewer Authority and potentially replace the methodology that utility uses to disperse its effluent.

Table 4. SELL Project potential mitigation tracts of highest value; Horry County, north of existing Refuge.

Property Owner Name	Parcel Number	Acreage	Habitat Notes	Stream Footage	Additional Notes
Grand Strand Water and Sewer	43500000001	1,829.71	Both tracts have high value for broad ecological restoration including for wetlands and long leaf pine habitats	All have significant frontage either on Bull Creek, Great Pee Dee River or Waccamaw River	These tracts include significant restoration, enhancement and preservation value and meet landscape-scale preservation needs
Grand Strand Water and Sewer	45500000001	4,464.23			
The May Company et al	46400000001	1,448.36	Bottomland hardwoods		
Total		**7,742.3**			

Table 5 presents parcels having the next highest value for mitigation for the SELL Project. These tracts, west of the Pee Dee River in the Refuge acquisition boundary, represent a total of ±3,198 acres, and if all could be acquired for a PRM for the SELL Project. These parcels represent significant opportunities for restoration and enhancement of aquatic resources meeting the intent of the 2008 Mitigation Rule as more than 70% of the acreage is estimated to wetlands impacted by prior silvicultural practices. Further, these parcels are in a relatively contiguous block. Utilization of these parcels for a PRM for the Project would require additional

PRM components and/or mitigation credits from an approved or proposed mitigation bank in the Project boundary in order to craft a hybrid mitigation plan meeting the needs of the proposed Project.

Table 6 lists parcels having a high value for mitigation for the SELL Project. These tracts, north of the Refuge and in the acquisition boundary, represent a total of ±2,120 acres if all could be acquired for a PRM for the SELL Project. Several of these parcels represent significant opportunities for restoration and enhancement of aquatic resources meeting the intent of the 2008 Mitigation Rule as more than 60% of the acreage is estimated to wetlands impacted by prior silvicultural practices. Further, these parcels are in a relatively contiguous block. Certain acreage within the Vandross Partners tracts may be part of Van Dross Bay Mitigation Bank and not eligible for mitigation for the Project. Acreage within these tracts that is not already protected may be worthy of wetland enhancement and preservation. Utilization of these parcels for a PRM for the Project would require

additional PRM components and/or mitigation credits from an approved or proposed mitigation bank in the Project boundary in order to craft a hybrid mitigation plan meeting the needs of the proposed Project. Table 7 depicts parcels having a high value for mitigation for the SELL Project. These tracts, northeast of the Refuge and in the acquisition boundary, represent a total of ±941 acres if all could be acquired for a PRM for the SELL Project. One of these parcels represents a significant opportunity for restoration and enhancement of aquatic resources meeting the intent of the 2008 Mitigation Rule. Lake Busby near Conway is a ±330-acre man-made lake built as a cooling pond for the now demolished Santee Cooper Grainger Steam-Electric Generating Plant. The lake was constructed in forested wetlands adjacent to the Waccamaw River prior to 1966. An earthen dam was built, filling wetlands in order to impound the lake. In 2018, Santee Cooper proposed to drain Lake Busby and restore hardwood seedlings to enhance the wetlands, however the plan was never implemented. Removal of the earthen fill and replanting the site would constitute a practicable wetland mitigation alternative. Further, Lake Busby and surrounding parcels are in a relatively contiguous block. Utilization of these parcels for a PRM for the Project would require additional PRM components and/or mitigation credits from an approved or proposed mitigation bank in the Project boundary in order to craft a hybrid mitigation plan meeting the needs of the proposed Project.

Table 8 presents parcels having a value for mitigation for the SELL Project. These tracts, east of the Refuge and in the acquisition boundary, represent a total of ±1,407 acres if all could be acquired for a PRM for the SELL Project. Most of these parcels represent preservation opportunities meeting the intent of the 2008 Mitigation Rule, and have varying degrees of interface with tidal streams and old ricefield ditches connecting to the Waccamaw River. The largest tracts listed in this table have wetland enhancement potential, and all could provide valuable buffer between the eastern Refuge boundary and further development of the Waccamaw Neck. Utilization of these parcels for a PRM for the Project would require additional PRM components and/or mitigation credits from an approved or proposed mitigation bank in the Project boundary in order to craft a hybrid mitigation plan meeting the needs of the proposed Project.

Table 9 lists parcels having a value for mitigation for the SELL Project. These tracts, south of the Refuge and in the acquisition boundary, represent a total of ±831 acres if all could be acquired for a PRM for the SELL Project. These tracts consist of intertidal freshwater wetlands or currently managed tidal impoundments that all were historically ricefields. Small islands occur as uplands throughout this area which is relatively contiguous. Acreage within these tracts that is not already protected by private conservation easements may be worthy of preservation. It is unlikely any of this acreage has wetland restoration or enhancement potential.

Table 9. SELL Project potential mitigation tracts in the Waccamaw NWR acquisition boundary; Georgetown County, intertidal freshwater wetlands (currently ricefields) below Thoroughfare Creek.

Property Owner Name	Parcel Number	Acreage	Habitat Notes	Stream Footage	Additional Notes
Breakwater North	03-0469-004-00-00	185	Intertidal freshwater wetlands all former ricefields some currently impounded and managed as noted; all tracts have high preservation value	All have frontage to various degrees either on Great Pee Dee or Waccamaw rivers or tidal creeks	Managed Tidal Impoundment
Exchange	03-0469-002-00-00	230.42			Managed Tidal Impoundment
Rosebank	03-0469-003-00-00	302.87			Managed Tidal Impoundment

Total		**831.2**			

Utilization of these parcels for a PRM for the Project would require additional PRM components and/or mitigation credits from an approved or proposed mitigation bank in the Project boundary in order to craft a hybrid mitigation plan meeting the needs of the proposed Project.

8.0 ANTICIPATED COSTS

The anticipated costs of compensatory mitigation for the SELL Project can be described only as a range until the preferred alternative is selected and the unavoidable impacts are calculated. The average range of impacts of the 16 conceptual alternative alignments is 245 acres of wetland impact and over 9,000 linear feet of stream impacts. Impacts to wetland resources could be higher, with the maximum calculation of impacts to be as high as 321 acres of wetlands and 15,684 linear feet of streams. Utilizing the total preservation to impact ratio of 30:1, which has been common for large impact projects in South Carolina, the preservation component of a PRM plan for the Project can be expected to be approximately 7,350 acres using the average impact calculations. With land costs for wetland predominant tracts ranging from $3,000 to $4,000 per acre, it is anticipated acquisition for a PRM plan alone would range from $22.1M to $29.4M depending on the availability of willing sellers from the lists compiled herein. This estimate represents only land acquisition costs and does not include any wetland or stream restoration or enhancement or other necessary components of a PRM such as monitoring and long-term stewardship.

The higher the ecological value and quality of a PRM plan is, it can drive raw land acquisition costs down by reducing acreage required, but any acquisition discount could be offset by the costs of wetland/stream restoration, monitoring and long-term stewardship. For the purpose of this preliminary analysis, an average wetland per acre cost of $1,500 can be assumed for a combination of restoration and enhancement. An additional average cost $90 per linear foot of stream restoration and enhancement should be included with the caveat that depending on which mitigation parcels are acquired, much of this area will have braided stream systems that functionally are wetlands rather than stream. Thus, there may be no streams on which to apply restoration and enhancement measures. Therefore, costs above land acquisition costs can be an additional $3.5M to $5.0M. Based on consideration above, total mitigation costs range is anticipated to be between $30M and $40M.

It is likely that neither of the resource agencies, USFWS and SCDNR, would take title to any acreage used for compensatory mitigation until restoration and enhancement work has been determined to be complete and monitoring indicates success. Compensatory mitigation costs associated with higher impacts obviously will be greater. Acquisition of the Carter Stilley II and Cowpens tracts could result in savings based on net-present values and a willing seller or bargain sale but would have the added benefits of already identified wetland and stream mitigation potential and meet the landscape-scale need.

Utilization of a more hybrid approach with a combination of mitigation bank credits and PRM likely will have higher costs than strictly PRM. Land costs for PRM tracts will remain relatively similar to the above stated estimates, but costs to purchase mitigation credits will be higher per credit having the potential to make the hybrid approach the most expensive. At this preliminary stage in Project planning, it is difficult to predict costs accurately enough to steer options; a more focused approach will present itself when the preferred alternative is selected.

Ultimately, for mitigation acreage acquisition, the use of third-party real estate professionals who work for non-profit organizations such as The Nature Conservancy, Open Space Institute or Conservation Fund should be considered for land acquisition by the Project sponsor due to their skill at negotiating bargain sales for conservation or recreational land and not revealing compensatory mitigation is the acreage acquisition goal.

9.0 CONCLUSIONS

As of the date of this mitigation needs analysis, the following is apparent:

- The SELL Project is expected to have significant impacts to aquatic resources, both wetlands and streams. The total calculation of impacts to WOTUS associated with this one Project likely will surpass the cumulative impacts permitted through all approved USACE Charleston District permits issued in any average year.
- The USACE Charleston District SOP is recognized to not be the appropriate tool to calculate mitigation needs based on impacts to WOTUS that could occur with the SELL Project, but SOP credit calculations are useful as a guide for the regulatory agencies.
- With the landscape-scale impacts associated with the SELL Project, a landscape-scale compensatory mitigation action will be appropriate and likely garner maximum stakeholder appeal.
- The mitigation hierarchy of the 2008 Mitigation Rule is first to use mitigation banking credits provided through approved mitigation banks, second to use an approved in-lieu fee mitigation program and third to use a PRM approach.
- Presently, there are insufficient mitigation banks that have readily available credits to fulfill the estimated wetland and stream mitigation need of the SELL Project. Over the next 2-4 years an increased number of mitigation banking credits may be available within the watersheds of impact as approved mitigation banks meet monitoring criteria and receive additional mitigation credit allocations. However, the number of mitigation banking credits available at this date will decrease over that same time period as the USACE Charleston District approves other permits in the Project area requiring the depletion of *on-the-shelf* mitigation banking credits. At this time, it is difficult to predict the availability of mitigation banking credits when the SELL Project has reached a planning stage sufficient for permit application.

- The USACE Charleston District has not approved an in-lieu fee program for South Carolina; thus, the in-lieu fee mitigation option is not available for the SELL Project.
- There are ample conceptual opportunities to develop and implement a PRM plan for the SELL Project. PRM plans have a history of use and success across South Carolina in watersheds where mitigation banking credits are not available or in limited supply.
- A hybrid approach to compensatory mitigation has been employed in South Carolina for projects with comparative impacts to SELL. The hybrid approach utilizes both acquisition of available mitigation banking credits from approved mitigation banks and use of PRM.
- Lands and waters titled to the USFWS are likely to be impacted by SELL. A conceptual PRM plan could result in the USFWS becoming the eventual long-term steward of compensatory mitigation acreage as long as it is in the Waccamaw NWR acquisition boundary.
- A conceptual PRM plan also could result in SCDNR becoming the eventual long-term steward of compensatory mitigation acreage.
- Costs associated with an adequate and complete mitigation plan will depend on the compensatory mitigation needs of the approved and final alternative alignment of the SELL Project, and the total mitigation costs range is anticipated to be between $30M and $40M given details known at present.

10.0 RECOMMENDED NEXT STEPS

Based on the information provided above, the following future activities are proposed:

- Confirm the preferred SELL alignment alternative.
- Confirm the mitigation approach with the project sponsor, USACE, SCDOT and project team.
- Refine a compensatory mitigation budget for the Project.
- Continue to monitor existing and pending mitigation banks that serve the SELL Project area.
- Schedule meetings with the Project team to discuss mitigation alternatives and schedule site visits to evaluate high priority tracts for conceptual PRM planning.
- Conduct site visits for reconnaissance as prioritized and recommended by the Project team.
- Discuss long-term stewardship opportunities for mitigation acreage with USFWS and SCDNR.

SCDOT

South Carolina Department of Transportation

1. How many days will be given for submitting a response? 21 days.
2. Do you have an anticipated project start date? As soon as a consultant is selected and a contract can be negotiated.
3. Do firms that respond to the RFP have to be pre-qualified with SCDOT to respond? Firms respond to the RFP we do not pre-qualify.
4. Are prior planning studies that have been completed for the project available to the public for review? If so, do you have a website where they are locate? Not at this time.
5. Would the scope of the solicitation include NEPA services only or would it include any engineering tasks? The scope includes the review of all studies applicable to an EIS.
6. Would the scope of the solicitation include hurricane evacuation modeling? No.
7. Since SCDOT is leading the procurement, will the contract for this scope be with SCDOT or Horry County? SCDOT.
8. Will there be a DBE requirement? Just a DBE Utilization Plan.

Request for Proposals Addendum 1
SCDOT Questions and Answers

NOTICE TO ALL CONSULTING ENGINEERING FIRMS

To all potential proposers:

Solicitation Number S-283-24
Environmental Impact Statement for the Proposed SC 22 Extension Project in Horry County, South Carolina

1. Page 2, last paragraph/Page 6 – Task 18 Supplemental activities – What Is envisioned as supplemental activities? This task is at the discretion of the USACOE and SCDOT. It may be necessary to have the 3rd party contractor perform an independent analysis.

2. Page 5, Task 6 – What is intended by the term "analysis" as it relates to the listed areas of technical information (i.e traffic analysis, hurricane evacuation analysis, etc.)? The supplemental data provided by SCDOT appears to contain analysis already completed by others for each of the items listed. Review to ensure all technical information is complete and recommend where additional work needs to be performed.

3. Page 4, Task 3/Page 6, Task 15 – What schedule has SCDOT anticipated for delivery of the EIS/ROD? 2026.

4. Page 11 – On page 1, it is noted that the consulting firm will serve as a contractor to the USACE and on page 4 it is noted in the project description that the solicitation is on behalf of Horry County. Please confirm that the language regarding current and former SCDOT employees is applicable to this solicitation. The language is still applicable.

5. General – The supplemental information provided by SCDOT included a Mitigation Needs Analysis document. What entity is responsible for the agency coordination, development and refinement of a compensatory mitigation plan for the project? This contract will not be responsible for developing the mitigation plan but will be responsible for developing/implementing the EIS agency coordination plan.
