FREEWAY DIVERGE ANALYSIS

File Name:	2040_ALT4_AM_SB_SC 707_OFF.xuf
Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	AM Peak
Project Description:	SELL Alt 04 SB SC 707 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	4.4	pc/mi/ln
Level of Service, LOS	A	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	56.6	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	56.6	mi/h
Density Across All Lanes, D	9.9	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	916	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	1050	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	916	467	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1120	571	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1120	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1120	4800	No
vR	571	2000	No
v12	1120	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	1120	pc/h
Length of Deceleration Lane, LA	1050	ft
Density in Off-Ramp Influence Area, DR	4.4	pc/mi/ln
Density in Off-Ramp Influence Area, DR	4.0	veh/mi/ln
Level of Service, LOS	A	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	1120	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	1120	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.479	
Average Speed in Ramp Influence Area, SR	56.6	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	56.6	mi/h
Density Across All Lanes, D	9.9	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	13.1	pc/mi/ln
Level of Service, LOS	B	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.3	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.3	mi/h
Density Across All Lanes, D	17.1	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data			
Number of Freeway Lanes	2		ln
Freeway Free-Flow Speed, FFS	70.0		mi/h
Segment Length	1500		ft
Multilane Highway or C-D Roadway?	Freeway		
Demand Volume, V	1599		veh/h
Peak Hour Factor, PHF	0.90		
Ramp Data			
Number of Ramp Lanes	1		ln
Ramp Free-Flow Speed, SFR	35.0		mi/h
Ramp Side	Right		
Length of First Deceleration Lane, LD or LD1	880		ft
Length of Second Deceleration Lane, LD2	-		ft
Junction Components	Freeway	Ramp	
Demand Volume, V	1599	241	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1955	295	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps		
Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1955	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1955	4800	No
vR	295	2000	No
v12	1955	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	1955	pc/h
Length of Deceleration Lane, LA	880	ft
Density in Off-Ramp Influence Area, DR	13.1	pc/mi/ln
Density in Off-Ramp Influence Area, DR	11.9	veh/mi/ln
Level of Service, LOS	B	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	1955	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	1955	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.455	
Average Speed in Ramp Influence Area, SR	57.3	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.3	mi/h
Density Across All Lanes, D	17.1	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	790	1375	1841	2246	2400

Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	2182	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	2182	4800	No
vR	628	2000	No
v12	2182	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	2182	pc/h
Length of Deceleration Lane, LA	230	ft
Density in Off-Ramp Influence Area, DR	20.9	pc/mi/ln
Density in Off-Ramp Influence Area, DR	19.0	veh/mi/ln
Level of Service, LOS	C	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	2182	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	2182	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.485	
Average Speed in Ramp Influence Area, SR	56.4	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	56.4	mi/h
Density Across All Lanes, D	19.3	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	446	1034	1499	1907	2400

Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	AM Peak
Project Description:	SELL Alt 07 NB US 378 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	7.3	pc/mi/ln
Level of Service, LOS	A	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.9	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.9	mi/h
Density Across All Lanes, D	10.4	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	986	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	815	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	986	47	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1205	57	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1205	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1205	4800	No
vR	57	2000	No
v12	1205	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	1205	pc/h
Length of Deceleration Lane, LA	815	ft
Density in Off-Ramp Influence Area, DR	7.3	pc/mi/ln
Density in Off-Ramp Influence Area, DR	6.6	veh/mi/ln
Level of Service, LOS	A	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	1205	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	1205	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.433	
Average Speed in Ramp Influence Area, SR	57.9	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.9	mi/h
Density Across All Lanes, D	10.4	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	776	1337	1805	2216	2400

Density in Off-Ramp (Diverge) Influence Area, DR	5.3	pc/mi/ln
Level of Service, LOS	A	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.3	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.3	mi/h
Density Across All Lanes, D	8.7	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	814	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	835	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	814	230	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	995	281	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	995	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	995	4800	No
vR	281	2000	No
v12	995	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	995	pc/h
Length of Deceleration Lane, LA	835	ft
Density in Off-Ramp Influence Area, DR	5.3	pc/mi/ln
Density in Off-Ramp Influence Area, DR	4.8	veh/mi/ln
Level of Service, LOS	A	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	995	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	995	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.453	
Average Speed in Ramp Influence Area, SR	57.3	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.3	mi/h
Density Across All Lanes, D	8.7	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E

Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	2973	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	2973	4800	No
vR	714	2000	No
v12	2973	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	2973	pc/h
Length of Deceleration Lane, LA	220	ft
Density in Off-Ramp Influence Area, DR	27.8	pc/mi/ln
Density in Off-Ramp Influence Area, DR	25.3	veh/mi/ln
Level of Service, LOS	C	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	2973	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	2973	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.492	
Average Speed in Ramp Influence Area, SR	56.2	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	56.2	mi/h
Density Across All Lanes, D	26.5	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	441	1030	1495	1901	2400
Service Flow Rate (SF), veh/h	803	1872	2717	3456	4363

Project Description:	SELL Alt 07 SB US 501 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	3.3	pc/mi/ln
Level of Service, LOS	A	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.8	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.8	mi/h
Density Across All Lanes, D	9.7	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data			
Number of Freeway Lanes	2		ln
Freeway Free-Flow Speed, FFS	70.0		mi/h
Segment Length	1500		ft
Multilane Highway or C-D Roadway?	Freeway		
Demand Volume, V	914		veh/h
Peak Hour Factor, PHF	0.90		
Ramp Data			
Number of Ramp Lanes	1		ln
Ramp Free-Flow Speed, SFR	35.0		mi/h
Ramp Side	Right		
Length of First Deceleration Lane, LD or LD1	1175		ft
Length of Second Deceleration Lane, LD2	-		ft
Junction Components	Freeway	Ramp	
Demand Volume, V	914	71	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1117	87	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps		
Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1117	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1117	4800	No
vR	87	2000	No
v12	1117	4400	No

	Freeway	Ramp

Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1265	417	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1265	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1265	4800	No
vR	417	2000	No
v12	1265	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	1265	pc/h
Length of Deceleration Lane, LA	875	ft
Density in Off-Ramp Influence Area, DR	7.3	pc/mi/ln
Density in Off-Ramp Influence Area, DR	6.6	veh/mi/ln
Level of Service, LOS	A	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	1265	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	1265	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.466	
Average Speed in Ramp Influence Area, SR	57.0	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.0	mi/h
Density Across All Lanes, D	11.1	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	785	1372	1837	2243	2400
Service Flow Rate (SF), veh/h	1426	2494	3340	4078	4363
Service Volume, veh/h	1284	2245	3006	3670	3927

FREEWAY DIVERGE ANALYSIS

File Name:	2040_ALT8_AM_SB_SC 544_OFF.xuf
Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	AM Peak
Project Description:	SELL Alt 08 SB SC 544 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	19.1	pc/mi/ln
Level of Service, LOS	B	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	54.9	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	54.9	mi/h
Density Across All Lanes, D	19.1	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	1720	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	360	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	1720	1001	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	2102	1224	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	2102	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	2102	4800	No
vR	1224	2000	No
v12	2102	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	2102	pc/h
Length of Deceleration Lane, LA	360	ft
Density in Off-Ramp Influence Area, DR	19.1	pc/mi/ln
Density in Off-Ramp Influence Area, DR	17.4	veh/mi/ln
Level of Service, LOS	B	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	2102	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	2102	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.538	
Average Speed in Ramp Influence Area, SR	54.9	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	54.9	mi/h
Density Across All Lanes, D	19.1	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	515	1101	1566	1718	-
Service Flow Rate (SF), veh/h	936	2002	2847	3124	-

FREEWAY DIVERGE ANALYSIS

File Name:	2040_ALT10_AM_NB_US 378_OFF.xuf
Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	AM Peak
Project Description:	SELL Alt 10 NB US 378 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	4.2	pc/mi/ln
Level of Service, LOS	A	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.7	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.7	mi/h
Density Across All Lanes, D	6.8	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	641	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	750	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	641	90	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	784	110	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	784	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	784	4800	No
vR	110	2000	No
v12	784	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	784	pc/h
Length of Deceleration Lane, LA	750	ft
Density in Off-Ramp Influence Area, DR	4.2	pc/mi/ln
Density in Off-Ramp Influence Area, DR	3.8	veh/mi/ln
Level of Service, LOS	A	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	784	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	784	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.438	
Average Speed in Ramp Influence Area, SR	57.7	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.7	mi/h
Density Across All Lanes, D	6.8	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	719	1307	1772	2179	2400
Service Flow Rate (SF), veh/h	1308	2376	3222	3962	4363

FREEWAY DIVERGE ANALYSIS

File Name:	2040_ALT10_PM_SB_US 378_OFF.xuf
Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	PM Peak
Project Description:	SELL Alt 10 SB US 378 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	11.9	pc/mi/ln
Level of Service, LOS	B	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	57.7	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	57.7	mi/h
Density Across All Lanes, D	15.2	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data		
Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	1439	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data		
Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	830	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	1439	98	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	1759	120	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps		
Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	1759	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	1759	4800	No
vR	120	2000	No
v12	1759	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	1759	pc/h
Length of Deceleration Lane, LA	830	ft
Density in Off-Ramp Influence Area, DR	11.9	pc/mi/ln
Density in Off-Ramp Influence Area, DR	10.8	veh/mi/ln
Level of Service, LOS	B	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	1759	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	1759	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.439	
Average Speed in Ramp Influence Area, SR	57.7	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	57.7	mi/h
Density Across All Lanes, D	15.2	pc/mi/ln

Service Volume Table

Target LOS	A	B	C	D	E
Freeway					
Max Service Flow Rate (MSF), pc/h/ln	764	1347	1814	2222	2400

FREEWAY DIVERGE ANALYSIS

File Name:	2040_ALT12_PM_NB_US 701_OFF.xuf
Analyst:	NM
Agency:	STV Incorporated
Jurisdiction:	Horry County
Date:	6/13/2022
Analysis Year:	2040
Time Period Analyzed:	PM Peak
Project Description:	SELL Alt 12 NB US 701 Off-Ramp
Units:	United States Customary

LOS and Performance Measures

Density in Off-Ramp (Diverge) Influence Area, DR	22.4	pc/mi/ln
Level of Service, LOS	C	
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Ramp Influence Area, SR	55.9	mi/h
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp (Diverge) Junction, S	55.9	mi/h
Density Across All Lanes, D	20.8	pc/mi/ln

Step 1: Specify Inputs and Convert Demand Volumes to Demand Flow Rates

Freeway Data

Number of Freeway Lanes	2	ln
Freeway Free-Flow Speed, FFS	70.0	mi/h
Segment Length	1500	ft
Multilane Highway or C-D Roadway?	Freeway	
Demand Volume, V	1900	veh/h
Peak Hour Factor, PHF	0.90	

Ramp Data

Number of Ramp Lanes	1	ln
Ramp Free-Flow Speed, SFR	35.0	mi/h
Ramp Side	Right	
Length of First Deceleration Lane, LD or LD1	205	ft
Length of Second Deceleration Lane, LD2	-	ft

Junction Components	Freeway	Ramp	
Demand Volume, V	1900	669	veh/h
Peak Hour Factor, PHF	0.90	0.90	
Percent Total Trucks	10.00	10.00	%
Percent SUTs	-	-	%
Percent TTs	-	-	%
Prop.Total Trucks, PT	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	
Heavy Vehicle Adj., fHV	0.909	0.909	
Terrain Type	Level	Level	
Percent Grade	-	-	%
Grade Length	-	-	mi
Demand Adj.Factor, DAF	1.000	1.000	
Demand Flow Rate, v	2322	818	pc/h

Step 2: Estimate the Approaching Flow Rate in Lanes 1 and 2

Estimating Flow in Lanes 1 and 2 for Off-Ramps

Adjacent Upstream On-Ramp Equilibrium Distance, LEQ	-	ft
Adjacent Downstream Off-Ramp Equilibrium Distance, LEQ	-	ft
Prop. Freeway Veh. in Lanes 1 and 2, PFD	1.000	
Flow Rate in Lanes 1 and 2, v12	2322	pc/h

Step 3: Estimate Capacity of Ramp-Freeway Junction and Compare Flow Rates

Capacity Checks

	Actual	Maximum	Violation?
vF	2322	4800	No
vR	818	2000	No
v12	2322	4400	No

	Freeway	Ramp	
Unadjusted Capacity, cmd	4800	2000	pc/h
Driver Population	All Familiar	All Familiar	
Driver Population CAF	1.000	1.000	
Weather Type	Non-Severe Weather	Non-Severe Weather	
Weather Type CAF	1.000	1.000	
Incident Type	No Incident	-	
Final Capacity Adj. Factor, CAF	1.000	1.000	
Adjusted Capacity, cmda	4800	2000	pc/h

Step 4: Estimate Density in Ramp Influence Area and Determine LOS

Demand Flow Rate in Lanes 1 and 2, v12	2322	pc/h
Length of Deceleration Lane, LA	205	ft
Density in Off-Ramp Influence Area, DR	22.4	pc/mi/ln
Density in Off-Ramp Influence Area, DR	20.4	veh/mi/ln
Level of Service, LOS	C	

Step 5: Estimate Speeds in the Vicinity of Ramp-Freeway Junctions

Freeway Free-Flow Speed, FFS	70.0	mi/h
Ramp Free-Flow Speed, SFR	35.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	
Final Speed Adjustment Factor, SAF	1.000	
Demand Flow Rate on Freeway, vF	2322	pc/h
Demand Flow Rate in Lanes 1 and 2, v12	2322	pc/h
Number of Outer Lanes on Freeway, NO	0	ln
Speed Index for Off-Ramp, DS	0.502	
Average Speed in Ramp Influence Area, SR	55.9	mi/h
Average Flow in Outer Lanes, vOA	-	pc/h/ln
Average Speed in Outer Lanes of Freeway, SO	76.8	mi/h
Average Speed for Off-Ramp Junction, S	55.9	mi/h
Density Across All Lanes, D	20.8	pc/mi/ln

Service Volume Table

Weaving Flow Rate, vW	76	pc/h
Non-Weaving Flow Rate, vNW	273	pc/h
Total Flow Rate, v	349	pc/h
Volume Ratio, VR	0.218	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	12	pc/h
Freeway-to-Ramp Flow Rate, vFR	64	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	76	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.218	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	4721	ft
Short Length, LS	540	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.218	
Short Length, LS	540	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2080	pc/h/ln
Demand Flow-Based Capacity, cIW	11009	pc/h
Weaving Segment Capacity, cW	3781	veh/h

Unadjusted Capacity of Weaving Area, cW	3781	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3781	veh/h
Adjusted Capacity of Weaving Area	4160	pc/h
Volume-to-Capacity Ratio, v/c	0.08	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	76	lc/h
Short Length, LS	540	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	273	pc/h
Non-Weaving Vehicle Index, INW	5	
Weaving Lane-Changing Rate, LCW	106	lc/h
Non-Weaving Lane-Changing Rate, LCNW	0	lc/h
Total Lane-Changing Rate, LCALL	106	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	106	lc/h
Short Length, LS	540	ft
Weaving Intensity Factor, W	0.063	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	66.7	mi/h
Average Non-Weaving Speed, SNW	68.6	mi/h
Average Speed, S	68.2	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	349	pc/h
Number of Lanes, N	2	ln
Average Speed, S	68.2	mi/h
Density, D	2.6	pc/mi/ln
Level of Service, LOS	A	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	758	1396	1767	1945	2080
Service Flow Rate (SF), veh/h	1379	2538	3212	3535	3781
Service Volume, veh/h	1241	2285	2891	3182	3403
One Direction DSV, 1000 veh/day	12	23	29	32	34
Bi-Direction DSV, 1000 veh/day	23	42	53	58	62

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	1.7	1.3	1.0	0.9
LOS	A	A	A	A

Demand Adjustment Factor, DAF	1.000	1.000	1.000	1.000	

Flow Rate, vi	1290	28	0	78	pc/h

Weaving Flow Rate, vW	106	pc/h
Non-Weaving Flow Rate, vNW	1290	pc/h
Total Flow Rate, v	1396	pc/h
Volume Ratio, VR	0.076	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	28	pc/h
Freeway-to-Ramp Flow Rate, vFR	78	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	106	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.076	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	3308	ft
Short Length, LS	540	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.076	
Short Length, LS	540	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2188	pc/h/ln
Demand Flow-Based Capacity, cIW	31579	pc/h
Weaving Segment Capacity, cW	3978	veh/h

Unadjusted Capacity of Weaving Area, cW	3978	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3978	veh/h
Adjusted Capacity of Weaving Area	4376	pc/h
Volume-to-Capacity Ratio, v/c	0.32	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	106	lc/h
Short Length, LS	540	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	1290	pc/h
Non-Weaving Vehicle Index, INW	23	
Weaving Lane-Changing Rate, LCW	136	lc/h
Non-Weaving Lane-Changing Rate, LCNW	173	lc/h
Total Lane-Changing Rate, LCALL	309	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	309	lc/h
Short Length, LS	540	ft
Weaving Intensity Factor, W	0.145	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	63.0	mi/h
Average Non-Weaving Speed, SNW	65.9	mi/h
Average Speed, S	65.7	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	1396	pc/h
Number of Lanes, N	2	ln
Average Speed, S	65.7	mi/h
Density, D	10.6	pc/mi/ln
Level of Service, LOS	A	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	783	1466	1878	2080	2188
Service Flow Rate (SF), veh/h	1424	2666	3414	3781	3978
Service Volume, veh/h	1281	2399	3072	3403	3580
One Direction DSV, 1000 veh/day	13	24	31	34	36
Bi-Direction DSV, 1000 veh/day	23	44	56	62	65

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	7.0	5.2	4.1	3.4
LOS	A	A	A	A

Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Freeway-to-Freeway Demand, VFF	227	veh/h
Ramp-to-Freeway Demand, VRF	2	veh/h
Freeway-to-Ramp Demand, VFR	51	veh/h
Ramp-to-Ramp Demand, VRR	0	veh/h
Peak Hour Factor, PHF	0.90	
Percent Total Trucks	10.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Adjust Volume

Volume Components

	VFF	VRF	VRR	VFR	
Demand Volume, Vi	227	2	0	51	veh/h
Peak Hour Factor, PHF	0.90	0.90	0.90	0.90	
Percent Total Trucks	10.00	10.00	10.00	10.00	%
Percent Single-Unit Trucks, SUT	-	-	-	-	%
Percent Tractor-Trailers, TT	-	-	-	-	%
Proportion of Total Trucks, PT	0.1000	0.1000	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	2.000	2.000	
Heavy Vehicle Adjustment Factor, fHV	0.909	0.909	0.909	0.909	
Demand Adjustment Factor, DAF	1.000	1.000	1.000	1.000	

Flow Rate, vi	277	2	0	62	pc/h

Weaving Flow Rate, vW	64	pc/h
Non-Weaving Flow Rate, vNW	277	pc/h
Total Flow Rate, v	341	pc/h
Volume Ratio, VR	0.188	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	2	pc/h
Freeway-to-Ramp Flow Rate, vFR	62	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	64	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.188	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	4414	ft
Short Length, LS	545	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.188	
Short Length, LS	545	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2104	pc/h/ln
Demand Flow-Based Capacity, cIW	12766	pc/h
Weaving Segment Capacity, cW	3825	veh/h

Unadjusted Capacity of Weaving Area, cW	3825	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3825	veh/h
Adjusted Capacity of Weaving Area	4208	pc/h
Volume-to-Capacity Ratio, v/c	0.08	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	64	lc/h
Short Length, LS	545	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	277	pc/h
Non-Weaving Vehicle Index, INW	5	
Weaving Lane-Changing Rate, LCW	95	lc/h
Non-Weaving Lane-Changing Rate, LCNW	0	lc/h
Total Lane-Changing Rate, LCALL	95	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	95	lc/h
Short Length, LS	545	ft
Weaving Intensity Factor, W	0.057	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	67.0	mi/h
Average Non-Weaving Speed, SNW	68.7	mi/h
Average Speed, S	68.4	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	341	pc/h
Number of Lanes, N	2	ln
Average Speed, S	68.4	mi/h
Density, D	2.5	pc/mi/ln
Level of Service, LOS	A	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	645	1202	1603	1931	2104
Service Flow Rate (SF), veh/h	1173	2185	2914	3510	3825
Service Volume, veh/h	1056	1967	2623	3159	3443
One Direction DSV, 1000 veh/day	11	20	26	32	34
Bi-Direction DSV, 1000 veh/day	19	36	48	57	63

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	1.7	1.2	1.0	0.8
LOS	A	A	A	A

Weaving Flow Rate, vW	82	pc/h
Non-Weaving Flow Rate, vNW	1283	pc/h
Total Flow Rate, v	1365	pc/h
Volume Ratio, VR	0.060	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	6	pc/h
Freeway-to-Ramp Flow Rate, vFR	76	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	82	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.060	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	3156	ft
Short Length, LS	545	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.060	
Short Length, LS	545	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2200	pc/h/ln
Demand Flow-Based Capacity, cIW	40000	pc/h
Weaving Segment Capacity, cW	4000	veh/h

Unadjusted Capacity of Weaving Area, cW	4000	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	4000	veh/h
Adjusted Capacity of Weaving Area	4400	pc/h
Volume-to-Capacity Ratio, v/c	0.31	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	82	lc/h
Short Length, LS	545	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	1283	pc/h
Non-Weaving Vehicle Index, INW	23	
Weaving Lane-Changing Rate, LCW	113	lc/h
Non-Weaving Lane-Changing Rate, LCNW	174	lc/h
Total Lane-Changing Rate, LCALL	287	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	287	lc/h
Short Length, LS	545	ft
Weaving Intensity Factor, W	0.136	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	63.4	mi/h
Average Non-Weaving Speed, SNW	66.1	mi/h
Average Speed, S	65.9	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	1365	pc/h
Number of Lanes, N	2	ln
Average Speed, S	65.9	mi/h
Density, D	10.4	pc/mi/ln
Level of Service, LOS	B	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	658	1257	1691	2039	2200
Service Flow Rate (SF), veh/h	1196	2284	3074	3707	4000
Service Volume, veh/h	1077	2056	2766	3336	3600
One Direction DSV, 1000 veh/day	11	21	28	33	36
Bi-Direction DSV, 1000 veh/day	20	37	50	61	65

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	6.8	5.0	4.0	3.4
LOS	A	A	A	A

Heavy Vehicle Adjustment Factor, fHV	0.909	0.909	0.909	0.909	
Demand Adjustment Factor, DAF	1.000	1.000	1.000	1.000	

Flow Rate, vi	236	6	0	42	pc/h

Weaving Flow Rate, vW	48	pc/h
Non-Weaving Flow Rate, vNW	236	pc/h
Total Flow Rate, v	284	pc/h
Volume Ratio, VR	0.169	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	6	pc/h
Freeway-to-Ramp Flow Rate, vFR	42	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	48	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.169	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	4222	ft
Short Length, LS	545	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.169	
Short Length, LS	545	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2119	pc/h/ln
Demand Flow-Based Capacity, cIW	14201	pc/h
Weaving Segment Capacity, cW	3852	veh/h

Unadjusted Capacity of Weaving Area, cW	3852	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3852	veh/h
Adjusted Capacity of Weaving Area	4238	pc/h
Volume-to-Capacity Ratio, v/c	0.07	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	48	lc/h
Short Length, LS	545	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	236	pc/h
Non-Weaving Vehicle Index, INW	4	
Weaving Lane-Changing Rate, LCW	79	lc/h
Non-Weaving Lane-Changing Rate, LCNW	0	lc/h
Total Lane-Changing Rate, LCALL	79	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	79	lc/h
Short Length, LS	545	ft
Weaving Intensity Factor, W	0.049	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	67.4	mi/h
Average Non-Weaving Speed, SNW	69.0	mi/h
Average Speed, S	68.7	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	284	pc/h
Number of Lanes, N	2	ln
Average Speed, S	68.7	mi/h
Density, D	2.1	pc/mi/ln
Level of Service, LOS	A	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	644	1214	1614	1940	2119
Service Flow Rate (SF), veh/h	1172	2208	2935	3528	3852
Service Volume, veh/h	1054	1987	2641	3175	3467
One Direction DSV, 1000 veh/day	11	20	26	32	35
Bi-Direction DSV, 1000 veh/day	19	36	48	58	63

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	1.4	1.0	0.8	0.7
LOS	A	A	A	A

Volume Ratio, VR	0.111	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	9	pc/h
Freeway-to-Ramp Flow Rate, vFR	92	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	101	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.111	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	3647	ft
Short Length, LS	545	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.111	
Short Length, LS	545	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2163	pc/h/ln
Demand Flow-Based Capacity, cIW	21622	pc/h
Weaving Segment Capacity, cW	3932	veh/h

Unadjusted Capacity of Weaving Area, cW	3932	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3932	veh/h
Adjusted Capacity of Weaving Area	4326	pc/h
Volume-to-Capacity Ratio, v/c	0.21	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	101	lc/h
Short Length, LS	545	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	809	pc/h
Non-Weaving Vehicle Index, INW	15	
Weaving Lane-Changing Rate, LCW	132	lc/h
Non-Weaving Lane-Changing Rate, LCNW	77	lc/h
Total Lane-Changing Rate, LCALL	209	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	209	lc/h
Short Length, LS	545	ft
Weaving Intensity Factor, W	0.106	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	64.7	mi/h
Average Non-Weaving Speed, SNW	67.1	mi/h
Average Speed, S	66.8	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	910	pc/h
Number of Lanes, N	2	ln
Average Speed, S	66.8	mi/h
Density, D	6.8	pc/mi/ln
Level of Service, LOS	A	

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	4.5	3.4	2.7	2.2
LOS	A	A	A	A

Grade Length	-	mi
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Freeway-to-Freeway Demand, VFF	952	veh/h
Ramp-to-Freeway Demand, VRF	4	veh/h
Freeway-to-Ramp Demand, VFR	86	veh/h
Ramp-to-Ramp Demand, VRR	0	veh/h
Peak Hour Factor, PHF	0.90	
Percent Total Trucks	10.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Adjust Volume

Volume Components

	VFF	VRF	VRR	VFR	
Demand Volume, Vi	952	4	0	86	veh/h
Peak Hour Factor, PHF	0.90	0.90	0.90	0.90	
Percent Total Trucks	10.00	10.00	10.00	10.00	%
Percent Single-Unit Trucks, SUT	-	-	-	-	%
Percent Tractor-Trailers, TT	-	-	-	-	%
Proportion of Total Trucks, PT	0.1000	0.1000	0.1000	0.1000	
Heavy Vehicle PCE, ET	2.000	2.000	2.000	2.000	
Heavy Vehicle Adjustment Factor, fHV	0.909	0.909	0.909	0.909	
Demand Adjustment Factor, DAF	1.000	1.000	1.000	1.000	

Flow Rate, vi	1164	5	0	105	pc/h

Weaving Flow Rate, vW	110	pc/h
Non-Weaving Flow Rate, vNW	1164	pc/h
Total Flow Rate, v	1274	pc/h
Volume Ratio, VR	0.086	

Step 3: Determine Configuration Characteristics

Weaving Configuration	One-Sided	
Minimum Ramp-to-Freeway Lane Changes, LCRF	1	lc/pc
Minimum Freeway-to-Ramp Lane Changes, LCFR	1	lc/pc
Minimum Ramp-to-Ramp Lane Changes, LCRR	0	lc/pc
Ramp-to-Freeway Flow Rate, vRF	5	pc/h
Freeway-to-Ramp Flow Rate, vFR	105	pc/h
Ramp-to-Ramp Flow Rate, vRR	0	pc/h
Minimum Weaving Lane-Changing Rate, LCMIN	110	lc/h

Step 4: Determine Maximum Weaving Length

Volume Ratio, VR	0.086	
Number of Maneuver Lanes, NWL	2	ln
Maximum Weaving Segment Length, LMAX	3404	ft
Short Length, LS	545	ft

Step 5: Determine Weaving Segment Capacity

Volume Ratio, VR	0.086	
Short Length, LS	545	ft
Number of Maneuver Lanes, NWL	2	ln
Number of Lanes, N	2	ln
Heavy Vehicle Adjustment Factor, fHV	0.909	
Freeway Segment Capacity, cIFL	2400	pc/h/ln
Density-Based Capacity, cIWL	2181	pc/h/ln
Demand Flow-Based Capacity, cIW	27907	pc/h
Weaving Segment Capacity, cW	3965	veh/h

Unadjusted Capacity of Weaving Area, cW	3965	veh/h
Driver Population	All Familiar	
Driver Population CAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type CAF	1.000	
Incident Type	No Incident	
Incident Type CAF	1.000	
Final Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity of Weaving Area, cwa	3965	veh/h
Adjusted Capacity of Weaving Area	4362	pc/h
Volume-to-Capacity Ratio, v/c	0.29	

Step 6: Determine Lane-Changing Rates

Minimum Weaving Lane-Changing Rate, LCMIN	110	lc/h
Short Length, LS	545	ft
Number of Lanes, N	2	ln
Interchange Density, ID	0.33	int/mi
Non-Weaving Flow Rate, vNW	1164	pc/h
Non-Weaving Vehicle Index, INW	21	
Weaving Lane-Changing Rate, LCW	141	lc/h
Non-Weaving Lane-Changing Rate, LCNW	150	lc/h
Total Lane-Changing Rate, LCALL	291	lc/h

Step 7: Determine Average Speeds of Weaving and Non-Weaving Vehicles

Free-Flow Speed, FFS	70.0	mi/h
Driver Population	All Familiar	
Driver Population SAF	1.000	
Weather Type	Non-Severe Weather	
Weather Type SAF	1.000	

Final Speed Adjustment Factor, SAF	1.000	
Total Lane-Changing Rate, LCALL	291	lc/h
Short Length, LS	545	ft
Weaving Intensity Factor, W	0.138	
Minimum Average Weaving Speed, SMIN	15	mi/h
Maximum Average Weaving Speed, SMAX	70.0	mi/h
Average Weaving Speed, SW	63.3	mi/h
Average Non-Weaving Speed, SNW	66.2	mi/h
Average Speed, S	65.9	mi/h

Step 8: Determine LOS

Demand Flow Rate, v	1274	pc/h
Number of Lanes, N	2	ln
Average Speed, S	65.9	mi/h
Density, D	9.7	pc/mi/ln
Level of Service, LOS	A	

Service Volume Table

Target LOS	A	B	C	D	E
Max Service Flow Rate (MSF), pc/h/ln	659	1244	1666	2011	2181
Service Flow Rate (SF), veh/h	1198	2262	3029	3656	3965
Service Volume, veh/h	1078	2035	2726	3290	3569
One Direction DSV, 1000 veh/day	11	20	27	33	36
Bi-Direction DSV, 1000 veh/day	20	37	50	60	65

Design Analysis Table

Number of Lanes, ln	3	4	5	6
Density, pc/mi/ln	6.3	4.7	3.8	3.1
LOS	A	A	A	A

This Freeway Weaving Segment text report was created in HCS™ Freeways Version 7.8.5 on 10/26/2022 15:16:33

1. Introduction

In the face of an approaching hurricane, it is critical to evacuate residents and visitors to help save lives. The provision of hurricane evacuation routes controlled by law enforcement personnel is one of the most basic ways to facilitate a safe and reliable evacuation. The Grand Strand area of Horry County and the Waccamaw Neck area of Georgetown County are major tourist attractions. Both counties have been continuously planning to reduce hurricane evacuation clearance times, defined in this study as: the time from the beginning of the evacuation until 90% of the evacuees clears the region and reaches the edge of the network, to improve the safety of both residents and visitors.

The Southern Evacuation Lifeline (SELL) project aims to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River. Previous studies have evaluated real and modeled evacuations from the area, with the last evaluation of SELL being performed in 2007. This study will utilize recent data to evaluate 16 alignments for the SELL project and will implement dynamic traffic assignment (DTA) to provide a more realistic evacuation behavior and routing simulation.

This study will build off a long list of previous studies that have been completed. These studies are listed in the following sections of this report. This study is also in line with the South Carolina State Hurricane Plan, which includes the South Carolina Emergency Operations Plan (SCEOP). The purpose of the South Carolina Hurricane Plan is to provide a framework of actions necessary for emergency operations in response to a hurricane in South Carolina.

2. Previous Studies

As stated previously, this study will build off evacuation studies that have been performed over the previous decades. These studies range from retrospectives of real-world evacuations to evaluating contraflow lane configurations and expanding highways or building new ones. Some of the previous studies are:

- South Carolina Hurricane Evacuation Study-Transportation Analysis (1986)
- Hurricane Hugo Post Storm Evacuation Analysis (1989)
- Hurricanes Bertha/Fran Post Storm Study (1996)
- Hurricane Floyd Post Storm Evacuation Analysis (1999)
- South Carolina Hurricane Evacuation Restudy-Transportation Analysis (2000)
- US 17/US 521 Contraflow Analysis-Georgetown County (2001)
- SC EPD 2000 Census Update of Abbreviated Traffic Model (2002)
- Brunswick County Nuclear Power Plant Evacuation Analysis (2002)
- Horry County Southern Connector Evacuation Route Analysis (2003)
- I-73 Hurricane Evacuation Alternative Alignments Analysis (2005)
- SELL Hurricane Evacuation Analysis Technical Memorandum (2007)
- South Carolina Hurricane Plan (2009)
- South Carolina Hurricane Evacuation Behavioral Study (2011)
- South Carolina Hurricane Plan (2022) and its appendices (such as **Appendix C** evacuation zones and clearance timing)
- Comprehensive Emergency Management Plan, Horry County (2022)

Traffic counts and behavioral observations from past evacuations helped shape the assumptions for this study. For example, surveys of residents provided information on what percent of those who lived in areas of varying storm risk heeded optional and mandatory evacuation orders. In addition, evacuation participation rates varied based on the expected strength of the approaching hurricane.

The 2009 South Carolina Hurricane Plan considered the evacuation clearance time for different regions of the state. The study area for the current model fell in the Northern region of the 2009 plan and typical clearance times for different tourist occupancy levels, and hurricane strengths are shown for this region (both counties) in Table 1. A more abstract version included in the 2022 report is shown in Table 2.

In the 2022 SC Hurricane plan, the participation rate was assumed to be 100% for the evacuation zones. It was also assumed that the population would be evacuated to locations outside the evacuation zone and use private vehicles. Another important assumption made in the 2022 plan was the 8-hour response time added to the evacuation time. The response rate was defined as the time the residence needs to respond to the evacuation order.

Table 1 – 2009 South Carolina Hurricane Plan Clearance Times (hours)

Hurricane Category & Evacuation Response	Northern Normal Land Use	
	Tourist Occupancy Low	High
Category 1-2		
Rapid	10.75	18.25
Medium	11.25	19.25
Long	11.75	19.75
Category 3-4		
Rapid	20.25	27.75
Medium	21.00	28.75
Long	21.25	29.25
Category 5		
Rapid	20.25	29.00
Medium	21.00	30.00
Long	21.25	30.25

Table 2 – 2022 South Carolina Hurricane Plan Clearance Times for Horry County and Georgetown County (hours)[1]

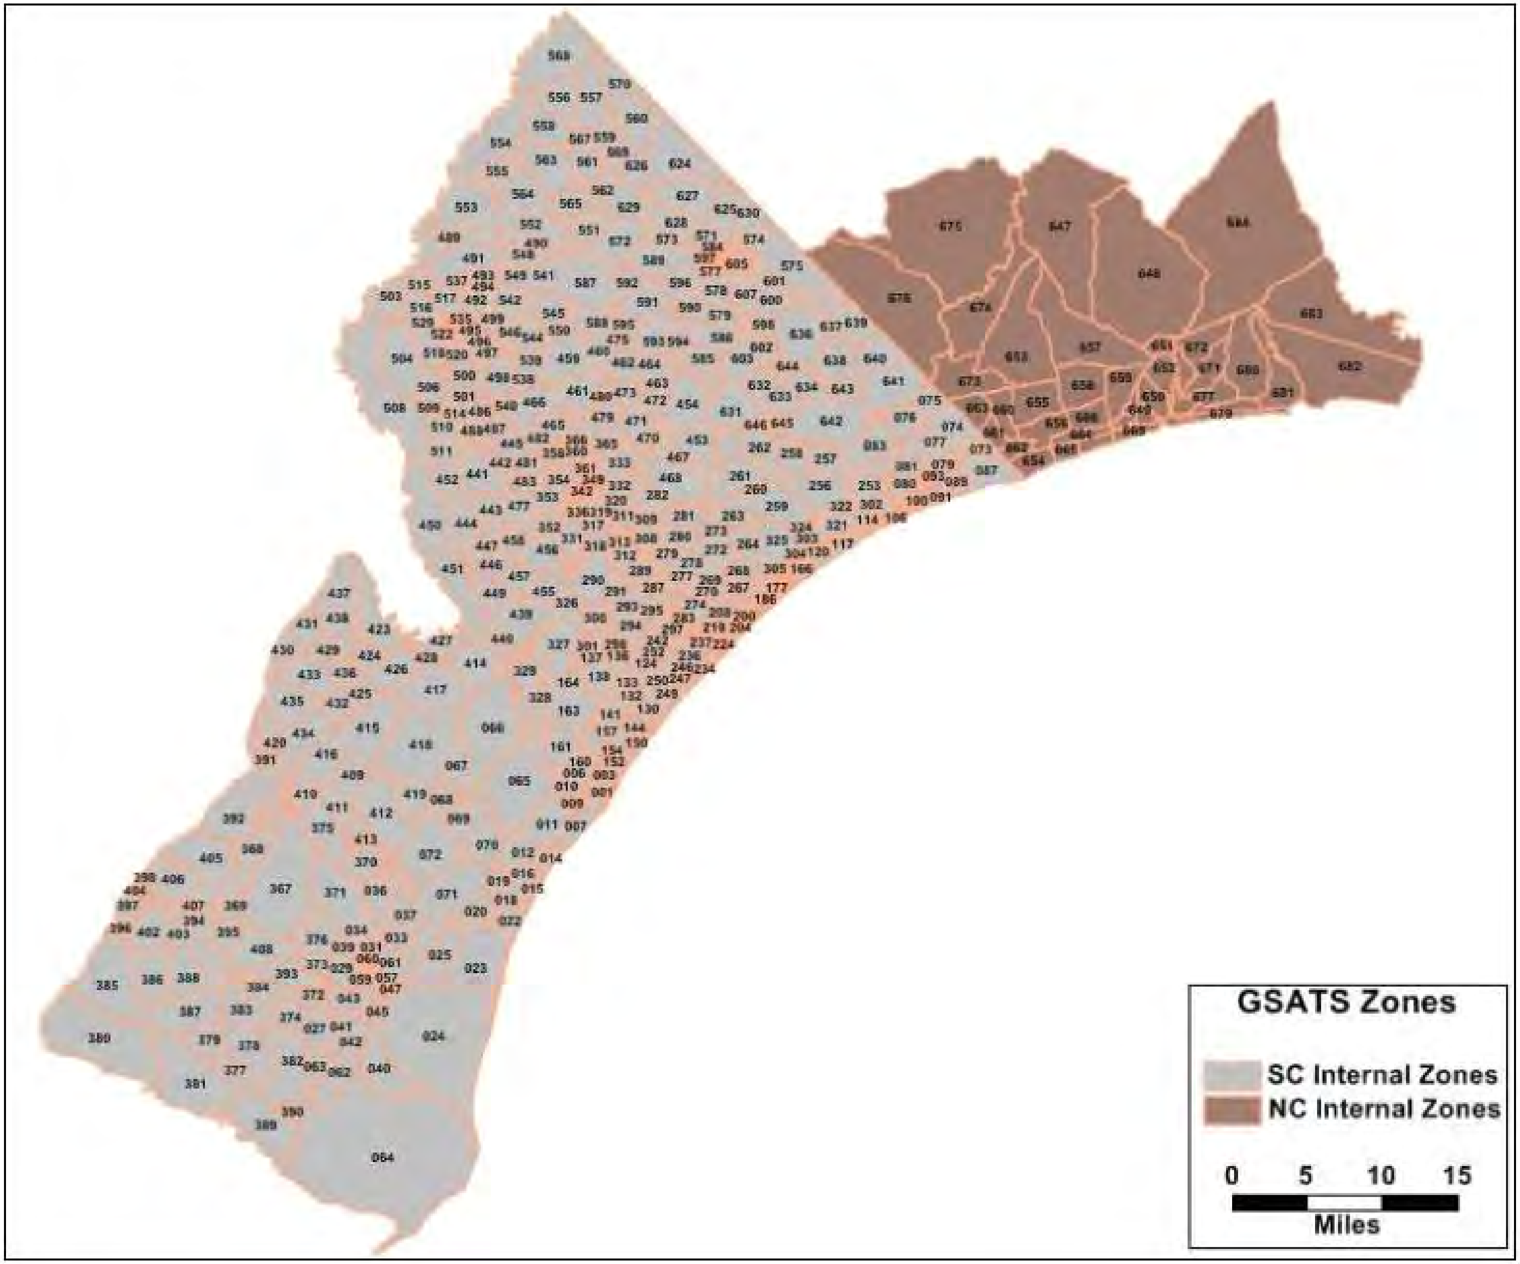
Evacuating Zones	Evacuating Population	Roadway Lane Reversal	Clearance Times (in Hours)
Zone A	254,712	None	18.3
Zone A and B	336,443	None	27.3
Zone A and B	336,443	US 501	23.2
Zone A, B, and C	432,386	None	34.6
Zone A, B, and C	432,386	US 501	29.3

3. Evacuation Modeling

This study used Dynamic Traffic Assignment (DTA) and dynamic travel demand modeling to analyze and evaluate the evacuation performance and estimate the clearance time. Specifically, TRANSIMS was used to perform the DTA. The modeling process started with the results of the Grand Strand Area Transportation Study (GSATS) 2040 Travel Demand Model. The GSATS model was run using TransCAD software. The GSATS model consists of 699 internal Traffic Analysis Zones (TAZs) and 22 external zones (721 TAZs in total), as shown in **Figure 1**. The model includes parts of both South Carolina and North Carolina. North Carolina was included in the GSATS model to better represent external trips from them. The model contains typical weekday travel patterns in the model region.

[1] The Zones are shown in Figure 2.

Figure 1 –Traffic Analysis Zones (TAZ's) in the GSATS Model



The GSATS model served multiple purposes in this study. The first use of the model was to extract the pattern of daily trips. As discussed later, these trips were also assumed to take place before the evacuation order occurs (before the start of evacuation). These trips were used to estimate where the residents and visitors were before evacuation and to create the trip back home.

Another usage of the GSATS model is the roadway network, which was used as the base network for the TRANSIMS model. In addition, the network geometry, volume delay functions, and functional classifications defined in the GSATS model were also used in the TRANSIMS model.

Finally, the GSATS model results were used to validate the TRANSIMS model. After transferring the demand and supply data to TRANSIMS, the TRANSIMS assignment results were compared with that of the TransCAD volumes. The hourly distribution percentage of trips from the model documentation per trip purpose was used to create the demand matrix in TRANSIMS. Uniform distribution assumptions were used for generating sub-hourly trips (i.e., 15-minute distributions), and model data were used to extract the socio-economic data related to the TAZs.

The trip tables used in the evacuation modeling consist of three components:

1- **Regular trips**: These are the trips that happen before the evacuation. For instance, if the evacuation time of TAZ A and B was assumed to be 2 PM and 6 PM, respectively, the evacuation time for this origin-destination (OD) pair was assumed to be 2 PM (the earliest of the two times). The trip interchange between each OD pair from the beginning of the day until one hour before the evacuation time was tracked and the net interchange of trips between the OD pair was calculated. All trips were assumed to take place as they regularly do up to this point. One hour before evacuation, the model created a return trip and brought returned all unbalanced trip interchange to their original location. For instance, if the balance of trip interchange between TAZ A and B shows that 100 more trips went to B compared to A, 100 trips were created from B to A to even out and equalize the total trip interchange. This is done to ensure that all trips that left a TAZ return before the evacuation starts.

2- **Population evacuation**: The population of each TAZ is assumed to be evacuated to the shelter zones or external zones based on behavioral assumptions. Some residents were assumed to evacuate earlier than the designated evacuation time for each TAZ. After the evacuation time, depending on the hurricane category, a certain percentage of the population is assumed to evacuate. Also, vehicle usage is assumed per each TAZ. The destination choice (between the shelter location or the external stations) is based on a gravity model. The gravity model depends on the shelter's capacity and the distance between the TAZ and the shelter location. These assumptions are described below and detailed in **Appendix B.**

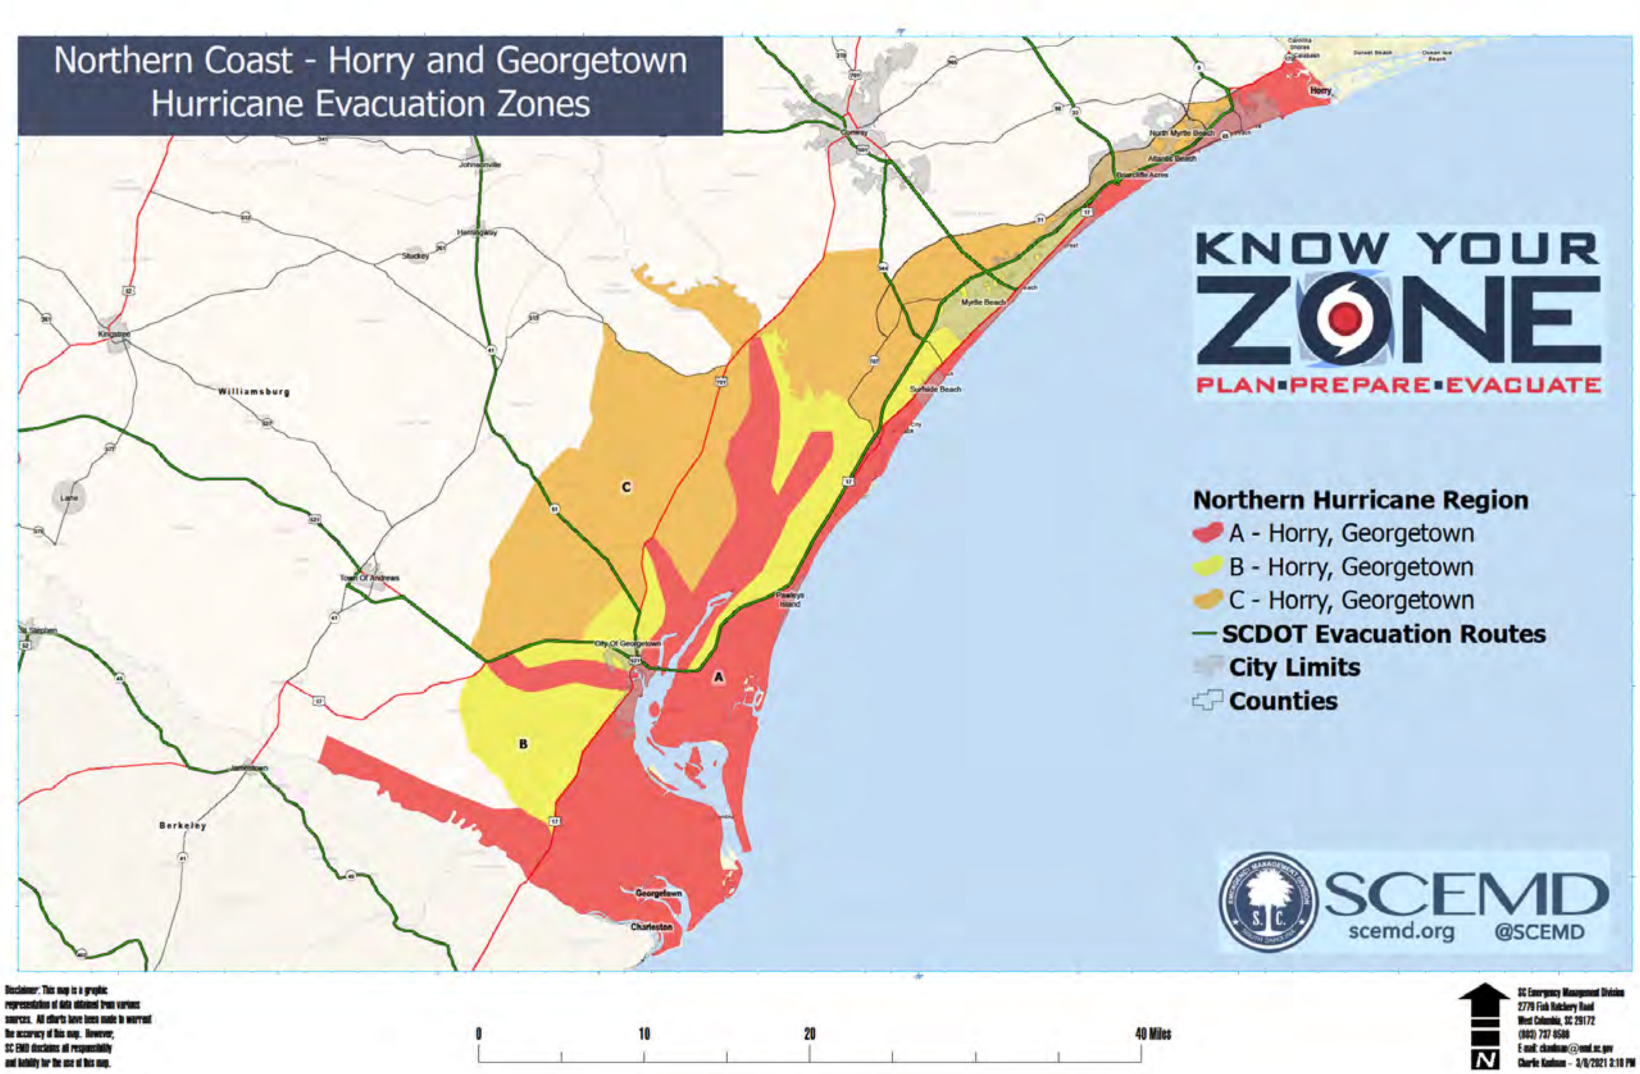
3- **Visitor evacuation**: The visitors' evacuation process is similar to the population process, except that the visitors were assumed to evacuate from hotel locations. Hotel occupancy rates were assumed, and the number of hotel rooms available in each TAZ is based on the TransCAD model inputs.

The trip tables estimated in these steps were assigned to the network using TRANSIMS. The max clearance times were estimated based on the latest arrival of the latest trip from the beginning of the scheduled evacuation time. We also reported the difference between the 90 percentile arrival time and the evacuation order time as the total evacuation time for each zone. TRANSIMS uses 15-minute trip tables and assigns the trips with a 15-minute resolution. The DTA procedure implemented in TRANSIMS considers the interaction between the trips and those still in the network. As such, the model is able to include more detail, at a person level, in the analysis.

3.1 Evacuation Zones

Georgetown and Horry Counties are divided into evacuation areas depending on the predicted severity of an approaching hurricane. These evacuation areas were established by the South Carolina Emergency Management Division (SCEMD) in consultation with local jurisdictions. The zones are shown below in Figure 2. The counties are broken up into three evacuation zones (A through C) depending on the severity of the predicted storm surge. Those living in mobile homes, even those residing outside these zones, should evacuate during any hurricane due to the low resiliency of these structures in high winds.

Figure 2 – Horry County and Georgetown County Evacuation Zones (from CEMP, January 2022)[2]



² https://www.scemd.org/prepare/know-your-zone/

3.2 Socio-economic Data

Population data and other socio-economic inputs for this report came from the Grand Strand Area Transportation Study (GSATS) TransCad model and are summarized in **Appendix A**. The base year for the model was 2015, and population trends were projected out to 2040 for model runs.

Population levels can fluctuate significantly based on the season and number of current tourists. For the purposes of the simulation, it was assumed that 85% of tourist housing units would be occupied. This was the higher of the two occupancy levels from the previous 2007 SELL study and was chosen to represent the peak tourism period.

In 2040, it was projected that Horry County would have approximately 380,000 permanent residents and 219,000 tourists during the peak season, while Georgetown County would have approximately 101,000 permanent residents and 17,000 tourists.

3.3 Evacuation Behaviors

In this section, some of the behavioral assumptions used in the model are outlined:

1. No Pre evacuation activities are assumed for any of the SELL Route alternatives. In other words, all evacuees are assumed to start evacuating after the evacuation order is put in place.
2. The population were assumed to evacuate the zone (based on their total percentage) based on the following distribution:
    a. 10% within the first hour
    b. 40% within the second hour
    c. 30% within the third hour
    d. 15% within the fourth hour
    e. 5% within the fifth hour
3. The friction factor of the gravity model was assumed to be an exponential function.
4. Residents in areas with storm surge risk (Zone A, B, or C) were assumed to evacuate based on the percentages shown in **Appendix B.**
5. The percentage of the population leaving the counties varied between 40% and 70% for the permanent population and nearly 100% for the seasonal population.
6. In the scheduled evacuation scenario, the evacuation start times were as follows:
    a. 5 AM for Zone A
    b. 10 AM for Zone B
    c. 2 PM for Zone C
    d. 6 PM for the Inland Additional Evacuation Areas
7. In addition, scenarios were evaluated where all evacuees departed at 10 AM regardless of which zone they lived in. The percentage of residents in each zone who evacuated still depended on the severity of the hurricane, giving three evacuation zone levels (A, B, C) and two evacuation procedures (staged, all at once) for a combination of six scenarios per SELL Route alternative.

Appendix B[3] provides details of the study's behavioral data assumptions for each evacuation zone, which include participation rates, destinations (out of county, shelters, etc.) and vehicle usage.

[3] Based on the details given in the 2009 study and updated using the changes made in the 2022 SC hurricane plan.

3.4 Roadway Assumptions

Sixteen SELL Route alternative scenarios were provided, in review of these alternatives, it was indicated that several of these alternatives were largely identical except for one or several segments that were not likely to impact the model assignments. These segments were of comparable length and/or not separated far from segments in otherwise identical alternatives. In these cases, one alternative was selected to represent the two similar alternatives both in the Travel Demand Model and the Hurricane Evacuation Model. This resulted in combining ten of the sixteen roadway alternatives to five alternatives to be tested in the GSATS model. This reduced the total number of modeled alignment alternatives from sixteen roadway alternatives to eleven SELL GSATS model alternatives as outlined below.

- Alternative 1 -> SELL 01
- Alternative 2 -> SELL 02
- Alternative 3 & Alternative 5 -> SELL 03
- Alternative 4 & Alternative 6 -> SELL 04
- Alternative 7 -> SELL 05
- Alternative 8 & Alternative 9 -> SELL 06
- Alternative 10 & Alternative 11 -> SELL 07
- Alternative 12 & Alternative 13 -> SELL 08
- Alternative 14 -> SELL 09
- Alternative 15 -> SELL 10
- Alternative 16 -> SELL 11

These eleven conceptual alternatives were evaluated using the GSATS model for both the No-Build and Build Alternatives. The No-Build and Build alternative scenario networks were incorporated with planned roadway improvements and the funded (existing and committed) projects. We also adjusted the speed limits from the GSATS model on some roadways, as they were different from the actual posted speed limit.

We have also included the reversible lanes on US 501 in Horry County east of Conway from SC 544/SC 544 Connector to the US 501/US 378 intersection in Conway. The extension of the reversible lane on US 501 from SC 22/US 501 interchange west of Conway to the SC 576/US 501 and US 501 Bypass in Marion County did not fully fall into the boundary of our network and we only included the parts that were within the network[4]. All SELL alternatives are shown side by side in Figure 3, while larger maps are included in **Appendix C.**

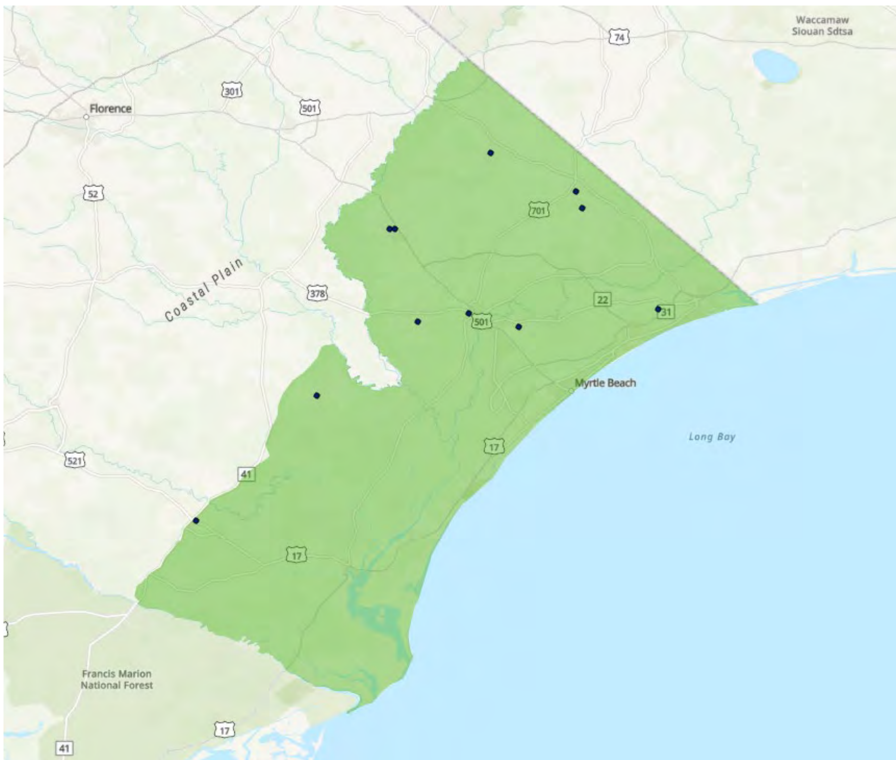
4. Analysis

The evacuation process was modeled by sending evacuees to one of sixteen shelter zones eleven of these zones are located within the evacuation region (that represent the shelter locations) and five are a destination outside of the region located at the edges of the network (not shown on in the figure below).The centroids for the shelter locations within the region are shown in Figure 7. Note that the location of the Conway High School and Whittemore Park Middle School are within one TAZ and as such shown with one dot only.

Figure 7 – Internal Evacuation Destinations (Shelters)[5]



The scenario numbers used in the table are as follows:

1. Zone A evacuation, **staggered** evacuations
2. Zone A and B evacuation, **staggered** evacuations
3. Zone A, B, and C evacuation, **staggered** evacuations
4. Zone A evacuation, **simultaneous** evacuations
5. Zone A and B evacuation, **simultaneous** evacuations
6. Zone A, B, and C evacuations, **simultaneous** evacuations

Metrics summarizing the evacuation time is shown below in Table 3.

[5] Locations taken from the Horry County Evacuation Plan (https://www.horrycountysc.gov/media/yqhcstlg/6-2-hurricane-annex.pdf) and for Georgetown County from (https://gtcounty.org/BusinessDirectoryII.aspx?lngBusinessCategoryID=33)

In this table, the **Total Evacuation Time** columns show the 90th-percentile evacuation time, and the **Max Evacuation Time** shows the time required for 100 percent evacuation (everyone evacuated), in hours and minutes. As the distribution of trips is different from one scenario to another due to shelter assignment, we have reported different performance measures to have a clearer understanding of the model result. Evacuation Time Distributions can be found in **Appendix E,** this distribution shows the range and frequency of the time the population left their origin until they arrived at their destination. The Maximum Evacuation time is higher than the Total Evacuation time due to evacuees that may depart late or hit extremely congested road segments within the model. The 90-percentile metric removes these extreme cases and is what is reported in Total Evacuation Time. The evaluation of SELL Routes (Alternatives) should be based on the combination of these criteria. The Traffic Flow Maps are given in **Appendix D**.

In comparing the simultaneous and staggered evacuation, it should be noted that there are more regular trips in the staggered evacuation than the simultaneous evacuation, in some cases, these could impact the evacuation times. Another important factor that should be noted is the calculation logic of clearance time. The clearance time for each individual is assumed to be the difference between the arrival and departure time of the evacuee. As such, the distribution of evacuation trips impacts the overall clearance time calculation. Regional Level Performance Summaries can be found in **Appendix G** and **Appendix F.** The summaries show the total Vehicle Mile Traveled (VMT), Vehicle Hours Traveled (VHT), and the percentage of roadways with congestion. These performance summaries could be used to determine the performance of each SELL Route.

There was a significant change observed on individual roads in the study region. For example, Figure 8 shows the difference in vehicle volume between the existing highway network and SELL 01 (comparison maps for all SELL Route alternatives are given in **Appendix G**). Roads in red had more users in SELL 01 compared to the No Build, while green ones experienced lower volumes.

Below are few observations from Comparing SELL 01 with No Build network,

- Scenario 6 with the No Build network it was observed that there are about 11,000 and 7,000 fewer vehicles on US-701 and Pee Dee Highway, respectively.
- Increase in the number of vehicles by 10,000 on Carolina Bays Parkway from US Hwy 17 to Holmestown Road which connects to the proposed SELL corridor.
- In addition, there is a decrease in the number of vehicles by 20,000 on US 501 from Carolina Bays Parkway to Conway.

5. Conclusions

In general, evacuation clearance times for SELL new location alternatives would be reduced compared to the No Build alternative. SELL 09, SELL 10, and SELL 11 alternatives, which include widening existing US 501 and SC 544 result in either a minor reduction or increased clearance times compared to the No Build alternative.

Overall, there are about 40,000 vehicles using the SELL new location alternative. Therefore, by providing an alternative evacuation route and reducing volumes on existing evacuation routes, the SELL project could reduce congestion, while increasing resiliency and predictability during future hurricane evacuations.

Figure 8 – Change in Road Volume, SELL Route 1 vs No Build Scenario

APPENDIX E

Natural Resources Technical Memorandum

NATURAL RESOURCES TECHNICAL MEMORANDUM

Southern Evacuation Lifeline (SELL)

Horry County, South Carolina

Draft.01 January 2023

Prepared for
Horry County
South Carolina Department of Transportation

Prepared by
Mead & Hunt

TABLES:

1 INTRODUCTION

1.1 Project Description

Horry County, in cooperation with the South Carolina Department of Transportation (SCDOT). Known as the Southern Evacuation Lifeline (SELL) project, Horry County proposes to construct a new location, multilane, controlled access roadway connecting Edward E Burroughs Highway (US 501) at Veterans Highway (SC 22) to US Highway 17 (US 17) near Surfside Beach to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River.

At the request of Horry County an environmental assessment (EA) is being performed, which outlines potential alternatives to satisfy the purpose and need of the project. These alternatives are being assessed to determine the least damaging practicable alternative with respect to construction impacts on the human and natural environment, while maintaining appropriate design criteria. The project, as proposed, would result in certain modifications to the human and natural environment.

In association with the EA, Mead & Hunt, Inc. (Mead & Hunt), along with subconsultants (Project Team), has been contracted to provide an environmental review of the proposed overall Project Study Area (PSA) approximately 200,000 acres in size, including documentation of existing natural resources (Please see **Appendix A, Tables 2-70 & Appendix B, Figure 1-1, Project Location Map**). Due to the development in the area and the substantial size of the study area, sixteen (16) alternative corridors have been developed within the PSA to be evaluated by Horry County (Please see **Appendix B, Figure 2-1 through 2-16, Alternative Corridors Map**). This Natural Resources Technical Memorandum (NRTM) summarizes the findings of the environmental review for each alternative.

This report provides an overall description of the project vicinity and specifically describes natural resources within each alternative corridor, including wetlands, water resources, plant communities, and protected species. The qualifications of the personnel involved in the preparation of this report are located in **Appendix D.**

1.2 Purpose

The primary purpose of the proposed project is to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River. Of concern within the SELL PSA is the evacuation of Zones A, B, and C during a Category 4 or 5 storm. The local population for these three zones is 229,060, with an additional seasonal population of 202,500. The current permanent and seasonal populations have limited routes to travel north and west during evacuation periods. Therefore, reducing hurricane evacuation clearance times and providing alternative routes for reliability is a need for the project.

1.3 Methodology

Mead & Hunt reviewed the following reference material:

- S.C. Department of Natural Resources (SCDNR). Rare, Threatened, and Endangered Species and Communities Known to Occur in Horry County (Reviewed: October/November 2022).
- U.S. Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS). Soil Survey Geographic (SSURGO) Database; South Carolina, Statewide (2015).
- USDA-NRCS Soil Data Access (SDA) Hydric Soils List; South Carolina. (Reviewed July 2022).

- USDA-NRCS National List of Hydric Soils Database; National List, All States. (Reviewed July 2022).
- USDA National Agriculture Imagery Program (NAIP) Aerial Photography; Horry County, South Carolina (2017).
- U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Seamless Wetlands Data for South Carolina (Last updated October 2017)
- USFWS. South Carolina Field Office. Endangered, Candidate, and At-Risk Species. County Listings. Horry County (Updated: March 2022).
- U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle; Horry, SC (2020).
- USGS National Hydrography Dataset (NHD) Geodatabase; Subregion 0304.
- USFWS, Information for Planning and Consultation (IPaC) Database (Accessed December 2022).
- South Carolina Natural Heritage Program (SCNHP) Database (Accessed December 2022).

Environmental scientists with the Project Team conducted a desktop survey utilizing various available mapping resources along with field verification reviews for each alternative corridor for the presence of wetlands and other waters of the U.S. (WOUS) during March and April 2021. The purpose of this task was to identify potential WOUS that could be incorporated into a preliminary alternative analysis to evaluate preliminary impacts, including mitigation strategy and costs. This evaluation captured potential WOUS based on Charleston District U.S. Army Corps of Engineers (USACE) guidelines for a preliminary jurisdictional determination (PJD) as well as the recent Navigable Waters Protection Rule (NWPR) effective June 22, 2020. The desktop delineation process includes the initial identification of aquatic resources including wetlands, streams, open waters, nonaquatic linear conveyances (NALC), and potential low flow channels. Subsequent wetland delineations and jurisdictional determinations will be appropriately conducted as the project progresses.

2 PHYSICAL RESOURCES

2.1 LAND USE

The PSA is located primarily in the western half of Horry County, South Carolina. At 1,134 square miles, Horry is the largest county in South Carolina by land mass and the fourth most populous county in the state with a population of 365,579.[1] Land use outside of existing metropolitan areas is comprised of predominantly undeveloped land including mixed pine forests, riverine forest systems, and pine plantations in various stages of development including clear-cuts, seedlings and mature stands.

Land use directly within the PSA is largely composed of low intensity-high intensity development centered along Myrtle Beach, cultivated crops, woody wetlands, emergent herbaceous wetlands, pine savannas, and evergreen forests. Land use to the east of Waccamaw River is primarily residential and commercial with extensive development between the River and US Highway 17.

2.2 PHYSIOGRAPHY AND TOPOGRAPHY

The PSA is located in the Atlantic and Gulf Coastal Plain physiographic province of South Carolina and is specifically situated within the Middle Atlantic Coastal Plain (63) Level III Ecoregion (Griffith, et al., 2002). The

[1] https://www.indexmundi.com/facts/united-states/quick-facts/south-carolina/land-area#map & https://www.census.gov/quickfacts/horrycountysouthcarolina (accessed 12/2022)

Middle Atlantic Coastal Plain is a transitional boundary area consisting of low elevation flat plains with many swamps, marshes, and estuaries. Poorly drained soils are common, and the region has a mix of coarse and fine textured soil. Pine plantations and cropland are typical as well as pine dominated mixed forests.

The PSA is further characterized by its location within the Carolina Flatwoods (63h) and the Mid-Atlantic Floodplains and Low Terraces (63n) Level IV Ecoregion (Griffith, et al., 2002). The Carolina Flatwoods region is characterized by flat land with wide upland surfaces and large areas of poorly drained soils. The region consists mostly of fine-loamy to coarse-loamy soils with periodically high-water tables. Other areas have clayey, sandy, or organic soils.

The Mid-Atlantic Floodplains and Low Terraces are a bottomland region interspersed with the Mid-Atlantic and Carolina Flatwoods region, occurring in the floodplains of rivers and major streams that cut through these flatwoods regions. In the case of this project, these floodplains are associated with the Waccamaw River. Soils are typically alluvial deposits that originate upstream and thus, different portions of this region can have significantly differing texture one river to the next. Please refer to **Appendix B, Figure 3a-1 through 3g-11** mapping for visual topographic depictions of each of the sixteen (16) alternatives.

2.3 Soils Description

The PSA is located in the western section of Horry County. The origins of soil parent material is the unconsolidated material in which a soil forms. It determines the mineral and chemical composition of the soil. The parent materials in the soils of Horry County are marine or fluvial deposits, which contain varying amounts of sand, silt, and clay. All of the soils in the county were deposited or formed during the Pleistocene, or glacial, epoch. The terraces in Horry County, in sequence from the lowest to the highest elevations, are Pamlico, Talbot, Penholoway, Wicomico, and Sunderland Terraces (NRCS, 1980).

The Farmland Protection Policy (FPPA) Act of 1981 requires evaluation of farmland conversions to nonagricultural uses. Farmland can be classified as prime farmland, unique farmland, or farmland of statewide importance. The proposed project would likely require the conversion of farmland soils; therefore, the project will be assessed under the provisions of the FPPA during the development of the EA.

Please refer to **Appendix B, Figure 4a-1 through 4g-11** mapping for visual soil depictions of each of the sixteen (16) alternatives. **Table 1** below provides soil descriptions for each of the soils identified within all sixteen (16) alternatives. Please refer to **Appendix A, Tables 2 through 17** for farmland classifications, hydric ratings, and acres for each Soil Map Units (SMU) located within the sixteen (16) alternatives.

Please note: The project will also have both short-term construction related impacts, as well as long-term operational impacts on soils in the PSA; however, these impacts are not considered adverse.

Table 1: SOIL DESCRIPTIONS FOR ALL ALTERNATIVES IN THE PROJECT STUDY AREA

SOIL UNIT	SOIL DESCRIPTION
Bd	The Bladen component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria.
BnA	The Blanton component makes up 85 percent of the map unit. Slopes are 0 to 6 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 60 inches during January, February, March, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria.
Br	The Brookman component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, November, December. Organic matter content in the surface horizon is about 7 percent. Nonirrigated land capability classification is 3w. This soil meets hydric criteria.
Ce	The Centenary component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 42 inches during January, February, March, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria.
Co	The Coxville component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3w. This soil meets hydric criteria.

SOIL UNIT	SOIL DESCRIPTION
DuA	The Duplin component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
Ec	The Echaw component makes up 95 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 30 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria.
EuA	The Eulonia component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
GoA	The Goldsboro component makes up 96 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
Hy	The Hobonny component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains, coastal plains. The parent material consists of loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, June, July, August, September, October,

SOIL UNIT	SOIL DESCRIPTION
	November, December. Organic matter content in the surface horizon is about 40 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface.
Jo	The Johnston component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains, coastal plains. The parent material consists of loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, June, July, November, December. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria.
KeB	The Kenansville component makes up 100 percent of the map unit. Slopes are 0 to 6 percent. This component is on marine terraces, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 48 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2s. This soil does not meet hydric criteria.
LaB	The Lakeland component makes up 100 percent of the map unit. Slopes are 0 to 6 percent. This component is on marine terraces, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 0 percent. Nonirrigated land capability classification is 4s. This soil does not meet hydric criteria.
Le	The Leon component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 6 inches during January, February, March, November, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria.
Ln	The Lynchburg component makes up 94 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March, April, November, December. Organic matter content

SOIL UNIT	SOIL DESCRIPTION
	in the surface horizon is about 3 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
Ly	The Lynn Haven component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria.
Me	The Meggett component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains, coastal plains. The parent material consists of clayey fluviomarine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 6w. This soil meets hydric criteria.
NeA	The Nansemond component makes up 95 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
Og	The Ogeechee component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3w. This soil meets hydric criteria.
Os	The Osier component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during

SOIL UNIT	SOIL DESCRIPTION
	January, February, March, November, December. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria.
Po	The Pocomoke component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, November, December. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria.
Ru	The Rutlege component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains, coastal plains. The parent material consists of sandy fluviomarine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria.
SfA	The Suffolk component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on marine terraces, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 1. This soil does not meet hydric criteria.
SfB	The Suffolk component makes up 90 percent of the map unit. Slopes are 2 to 6 percent. This component is on marine terraces, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria.
Wa	The Wahee component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March, December. Organic matter content in the surface

SOIL UNIT	SOIL DESCRIPTION
	horizon is about 3 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
We	The Witherbee component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3w. This soil does not meet hydric criteria.
Wo	The Woodington component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3w. This soil meets hydric criteria.
YaA	The Yauhannah component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
Ye	The Yemassee component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during January, February, March, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.
EuB	The Eulonia component makes up 92 percent of the map unit. Slopes are 2 to 6 percent. This component is on marine terraces, coastal plains. The parent material consists of clayey marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18

SOIL UNIT	SOIL DESCRIPTION
	inches during January, February, March, April, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria.
Ho	The Hobcaw component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains, coastal plains. The parent material consists of loamy fluviomarine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 6w. This soil meets hydric criteria.
Yo	The Yonges component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3w. This soil meets hydric criteria.
Ud	The Udorthents component makes up 51 percent of the map unit. Slopes are 0 to 6 percent. This component is on fills, coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria.

3 BIOTIC RESOURCES

3.1 Terrestrial Plant Communities

Vegetative terrestrial communities in the PSA were distinguished by plant species, location in the landscape, past disturbances, and hydrologic characteristics. For the purpose of this report, only habitats located directly within the PSA are summarized. Based on concentrated desktop reviews conducted December 2022, five (5) terrestrial community types are present within the PSA, including: 1) Blackwater River Floodplain Forest, 2) Cypress Gum Swamp, 3) Mesic Mixed Pine / Hardwood Forest, 4) Pine Plantation (including clearcut), and 5) Maintained and Disturbed Land.

A brief summary of the terrestrial habitat communities found within the PSA follows:

Blackwater River Floodplain Forest

Blackwater river systems are defined by rivers that originate in the Coastal Plain and are characterized by a slow-moving channel with a silt bottom. The Blackwater River Floodplain Forest is a community type located along the banks and overflow areas of these blackwater rivers. Within the PSA, this is the dominant community type along Cypress Swamp and Four Hole Swamp. Dominant vegetation in this community consists of an overstory of bald cypress, black tupelo (*Nyssa sylvatica*), water tupelo (*Nyssa aquatica*), red maple (*Acer rubrum*), and sweetgum (*Liquidambar styraciflua*). This community experiences frequent flooding and periods of extended inundation, which limits understory vegetation development. However, some areas contain an understory composed of false nettle (*Boehmeria cylindrica*), switch cane (*Arundinaria gigantea*), and fetterbush (*Lyonia lucida*) as well as muscadine (*Vitis rotundifolia*).

Cypress Gum Swamp

The Cypress Gum Swamp community is a Coastal Plain community type that is frequently flooded or inundated and contains poorly drained soils. Within the PSA, Cypress Gum Swamps can be found throughout wetland areas not in direct association with riverine systems. The overstory within this community is dominated by bald cypress, black tupelo, water tupelo, and red maple. The understory is dominated by red bay (*Persea borbonia*), Chinese privet (*Ligustrum sinense*), lizard tail (*Saururus cernuus*), and pepper bush (*Clethera alnifolia*). Woody vines of muscadine and poison ivy (*Toxicodendron radicans*) are also present.

Mesic Mixed Pine/Hardwood Forest

Mesic Mixed Pine/Hardwood Forests are the most common natural community type within the PSA. This community is found throughout the PSA including roadsides and median areas that have not been cleared. Dominant vegetation consists of pine and hardwood tree species in varying stages of development from successional to mature forests. Vegetation within this community is variable, but consists mostly of sweetgum, red maple, loblolly pine (*Pinus taeda*), American beech (*Fagus grandifolia*), water oak (*Quercus nigra*), northern red oak (Quercus rubra), winged elm (*Ulmus alata*), white oak (Quercus alba), willow oak (*Quercus phellos*), tulip poplar (*Lirodendron tulipifera*), mockernut hickory (*Carya tomentosa*), black tupelo, eastern red cedar (*Juniperus virginiana*), and American holly (*Ilex opaca*). This community type has a light shrub layer of mostly Chinese privet, American witch-hazel (*Hamamelis virginiana*), and Northern spicebush (*Lindera benzoin*). Herbaceous plant species observed within this community included Virginia chain fern (*Woodwardia virginiana*), cinnamon fern (*Osmundastrum cinnamomeum*), Christmas fern (*Polystichum acrostichoides*), broomsedge (*Andropogon virginicus*), Japanese stilt grass (*Microstegium vimineum*), and dwarf palmetto (*Sabal minor*). Common woody vines included Virginia creeper (*Parthenocissus quinquefolia*), common greenbrier (*Smilax rotundifolia*), trumpet vine (*Campsis radicans*), muscadine, and poison ivy.

Pine Plantations

Pine Plantations can be found throughout the PSA. These areas are monocultures comprised almost entirely of pines; either loblolly pine, slash pine (*Pinus elliottii*), or longleaf pine (*Pinus palusris*). These pines are grown in rotation where mature trees are harvested, often leaving a clear cut with no vegetation where a new crop of trees will grow. Within the PSA, pine plantations exist at all stages of development including clear cuts, seedlings, saplings, and mature stands. Pine plantations are often maintained through prescribed burns to maintain a minimal understory.

Maintained and Disturbed Land

The Maintained and Disturbed Land community type is found throughout the PSA, and occurs primarily alongside US 501, SC 544, US 378, and US 17. Maintained and disturbed land is kept by frequent mowing and therefore is comprised mostly of herbaceous species, including various grasses such as Bermuda grass (*Cynodon dactylon*), bahiagrass (*Paspalum notatum*), common fescue (*Festuca sp.*), ryegrass (*Lolium perenne*) and bluegrass (*Poa sp.*).

3.2 Wetland Plant Communities

A total of 84 wetland communities were depicted on the NWI Wetlands Mapper within the PSA, including six (6) riverine systems; three (3) palustrine unconsolidated bottom wetland systems; 26 palustrine scrub-shrub wetland systems; 37 palustrine forested wetland systems; 11 palustrine emergent wetland systems; and one (1) lake system.

Please refer to **Appendix B, Figure 5a-1 through 5g-11** mapping for visual NWI depictions of each of the sixteen (16) alternatives. **Table 18** below provides NWI descriptions for each of wetland systems identified within all sixteen (16) alternatives. Please refer to **Appendix A, Tables 19 through 34** for a summary of NWI features within each alternative.

Table 18: NWI DESCRIPTIONS FOR ALL ALTERNATIVES IN THE PROJECT STUDY AREA

3.3 Aquatic Plant Communities

Based on desktop review using the Annual South Carolina Aquatic Plant Management Plan (2019), evidence of aquatic plant communities is observed within the PSA including water hyacinth (*Eichhornia crassipes*), common reed (*Phragmites spp.*), and alligatorweed (*Alternanthera philoxeroides*).

4 WATERS OF THE U.S.

Waters of the U.S. are defined by 33 CFR 328.3(b) and protected by Section 404 of the Clean Water Act (33 U.S.C. 1344), which is administered and enforced in South Carolina by the U.S. Army Corps of Engineers (USACE), Charleston District. The term "Waters of the U.S." is defined in 33 CFR Part 328 as:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
2. All interstate waters including interstate wetlands;
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
   - Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
   - From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
   - Which are used or could be used for industrial purpose by industries in interstate commerce;
4. All impoundments of waters otherwise defined as waters of the United States under the definition;
5. Tributaries of waters identified in paragraphs 1 – 4 above;
6. The territorial seas; and
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in 1 – 6 above.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the Clean Water Act (other than cooling ponds as defined in 40 CFR 123.11(m) which also meet the criteria of this definition), are not waters of the United States. Waters of the U.S. do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, the final authority regarding Clean Water Act jurisdiction remains with the Environmental Protection Agency.

Wetlands are defined as those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, under normal circumstances a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands are defined in the field as areas that display positive evidence of three environmental parameters including dominance of hydrophytic vegetation, wetland hydrology, and hydric soils (USACE, 1987).

Infrastructure Consulting & Engineering (ICE) was tasked with the preliminary identification of potential wetlands and other waters of the U.S. (WoUS) along each alternative corridor. Specifically, ICE implemented a GIS desktop approach utilizing various available mapping resources along with field verification reviews. This evaluation captured potential WoUS based on preliminary jurisdictional determination (PJD) guidelines as well as the Navigable Waters Protection Rule (NWPR) effective June 22, 2020. Subsequent wetland delineations and jurisdictional determinations will be appropriately conducted as the project progresses. The desktop delineation process includes the initial identification of aquatic resources including wetlands, streams, open waters, nonaquatic linear conveyances (NALC), and potential low flow channels (LFC).

Please see **Appendix B, Figure 6a-1 through 6g-11** for the location and extent of the delineated aquatic resources for each of the sixteen (16) alternatives. Please refer to **Appendix A, Tables 35 through 69** for a summary of aquatic features within each alternative.

4.1 Permitting

A Clean Water Act Section 404 permit is required for impacts to waters of the U.S., including wetlands. Section 404 is administered by the U.S. Army Corps of Engineers (USACE). Depending on the type and extent of waters of the U.S. (including wetlands) to be impacted, Section 404 permitting requirements can range from activities that are considered exempt or preauthorized to those requiring pre-construction notification (PCN) for a Nationwide Permit (NWP) or Individual Permit (IP) from the USACE.

In addition to the Section 404 permit, SCDHEC must grant, deny, or waive a Water Quality Certification (WQC), in accordance with Section 401 of the Clean Water Act. Waters considered by SCDHEC to be sensitive may also require additional consideration during the 401 WQC process. These include, but are not limited to, Outstanding Resource Waters (ORW), Shellfish Harvesting Waters (SFH), trout waters, areas draining to waters included on the 303(d) list of impaired waters, and areas draining to waters with an approved TMDL. According to SCDHEC reports, the project contains TMDL waters, as well as waters listed on the Draft 303(d) list.

Specific permitting requirements and strategies for the project will be determined once impacts to wetlands (and other WoUS) are quantified following establishment of proposed project construction limits. Pursuant to Section 404, regulated discharges would include, but are not necessarily limited to, the placement of fill material, riprap, pipes, culverts, etc., into waters of the U.S. The permit application must include a delineation of affected WoUS, as well as a description of impact avoidance and minimization strategies, and an alternatives analysis.

It is anticipated that the SELL project will require an IP due to the level of impacts anticipated to WoUS. It is not uncommon for the regulatory processing of an IP application to take close to a year due to the public comment period required for IP's. In addition, a Section 401 WQC, Navigable Waters Permit, and SCDHEC-Office of Ocean and Coastal Resource Management (OCRM) Costal Zone Consistency Certification are anticipated.

Compensatory Mitigation

Compensatory mitigation is normally required to offset unavoidable losses of waters of the U.S. The Council on Environmental Quality (CEQ) has defined mitigation in 40 CFR Part 1508.20 to include: avoiding impacts, minimizing impacts, rectifying impacts, reducing impacts over time, and compensating for impacts. Three general types of mitigation include avoidance, minimization, and compensatory mitigation. Compensatory mitigation consists usually of the restoration of existing degraded wetlands or waters, or the creation of wetlands/waters of equal or greater value than those to be impacted. This type of mitigation is only undertaken after avoidance and minimization actions are exhausted and should be undertaken, when practicable, in areas near the impact site (i.e., on-site compensatory mitigation). The USACE typically requires compensatory mitigation for any wetland impacts for which a Section 404 permit application is submitted.

It is anticipated that compensatory mitigation for permanent project impacts will be attained through purchase of mitigation credits from a USACE approved mitigation bank. Specific mitigation requirements will be established during the Section 404 permitting process. If mitigation banks cannot service all the credit needs for the SELL project, a Permitee-Responsible Mitigation (PRM) plan will be necessary in which the permitee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of mitigation either at the site of the permitted impacts or at an off-site location within the same watershed.

5 WATER RESOURCES AND WATER QUALITY

5.1 WATER RESOURCES

The SC Department of Health and Environmental Control (SCDHEC) divides South Carolina into eight (8) major river basins. A river basin can be described as a geographic area in which all surface waters drain to a common point. The PSA extends into the Pee Dee River Basin.

Pee Dee River Basin

The Pee Dee River Basin extends through North and South Carolina from the northwestern corner of North Carolina near Blowing Rock to the Winyah Bay in Georgetown. The basin covers and area approximately 433 miles long and includes 5,862 miles of streams and rivers. More than 20,000 acres of the basin is covered by lakes. The Basin covers a number of geographical areas, starting at the Appalachian Mountains and North Carolina foothills continuing through the central Piedmont and into the Sandhills before exiting to the Atlantic Ocean through Winyah Bay. Mead & Hunt reviewed the Basinwide Watershed Water Quality Assessment Report for the Pee Dee River Basin (SCDHEC, 2015) and the S.C. List of 303(d) Impaired Waters (SCDHEC, 2018) for information pertaining to water resources and water quality.

The South Carolina portion of the Pee Dee River Basin flows from the Piedmont and Sandhills regions of the state to the Upper and Lower Coastal Plain and Coastal Zone regions and encompasses 45 watersheds (10-digit hydrologic unit) and 5,022,747 acres. SCDHEC's Pee Dee Basin includes the Lynches River Basin (hydrologic unit

03040202), the Black River Basin (hydrologic unit 03040205), the Waccamaw River Basin (hydrologic unit 03040206), the South Carolina portion of the Great Pee Dee River Basin (hydrologic units 03040201, 03040203, 03040204, 03040207), and the Pee Dee Coastal Frontage Basin (hydrologic unit 03050208).

The sub-basins located within all sixteen (16) alternatives are the Waccamaw River (HUC 3040206), the Little Pee Dee River (HUC 3040204), and the Lower Pee Dee River (HUC 3040207). Please see **Appendix B Figure 7-1 through 7-16** for watershed mapping.

5.2 303(d) List of Impaired Waters

In accordance with Section 303(d) of the 1972 Federal Clean Water Act (CWA), SCDHEC evaluates water bodies identified as impaired for appropriate inclusion on the Section 303(d) list. The 303(d) list is a State list of waters that are not meeting water quality standards or have impaired uses. The 303(d) list targets water bodies that do not meet water quality standards set for the state for water quality management, as well as identifying the cause(s) of the impairment and the designated classifications.

Please refer to **Appendix B, Figure 7-1 through 7-16** mapping for the drainage locations of water quality stations for each alternative. **Appendix A, Table 70** provides detailed information on those water quality stations and whether the station is listed on the 303(d) list.

5.3 Total Maximum Daily Loads

A TMDL, or Total Maximum Daily Load, is the amount of a single pollutant (e.g., bacteria, nutrients, metals) that can enter a waterbody on a daily basis and still meet water quality standards set forth by the State. “TMDL” refers to both the calculation of a pollutant entering a waterbody, as well as a document which includes this calculation along with source assessments, watershed and land use information, reductions and allocations information, implementation and other relevant information, maps, figures and pictures (SCDHEC, 2015).

The goal of a TMDL is to identify potential pollution sources, calculate and quantify the reduction of those sources, and to provide general implementation information needed in order to meet water quality standards and improve water quality. After the approval of the TMDL, an implementation plan can be developed to realize the goals of the written TMDL plan document. Implementation of a TMDL has the potential to reduce sources of pollution within a watershed and the potential to restore the full use of the waterbody.

TMDLs are determined by calculating all the point and nonpoint sources for the pollutant causing the impairment. After a TMDL is calculated, the amount of load entering from point and nonpoint sources is compared to the water quality standards for that waterbody. Then this total loading is reduced to the levels where the water quality standards can be met. This reduced loading is then divided among all the point and nonpoint sources.

A TMDL has been developed for all three (3) sub-basins; however, they are primarily located mostly within the Waccamaw River (HUC 3040206) and the Lower Pee Dee River (HUC 3040207). The TMDL includes the eastern/southern portion of the PSA. The TMDL parameter measured within the project boundaries is Dissolved

Oxygen (DO). Please refer to **Appendix B, Figure 7-1 through 7-16** mapping which depicts the location of the TMDL boundary within the PSA and which water quality stations/alternatives are located within the TMDL.

5.4 SCDHEC Regulated Permits

5.4.1 National Pollutant Discharge Elimination System

Point source discharge is any discharge that is released to the waters of the State by a discernible, confined and discrete conveyance, including but not limited to a pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel, or other floating craft from which waste is or may be discharged. The National Pollutant Discharge Elimination System (NPDES) Permit Program was created by Section 402 of the CWA. In 1975, the Bureau of Water received authority from the EPA to administer the NPDES Permit Program in South Carolina. The SCDHEC Bureau of Water is responsible for the permitting, compliance, monitoring and enforcement activities of the program.
Persons with point source discharges to surface waters are required to have NPDES permits. Typical regulated point source discharges are:

- discharges from wastewater treatment systems owned by municipalities, industries, private utilities, State and Federal government, etc.;
- discharges such as cooling water, boiler blow down, etc.;
- stormwater discharges from municipal separate storm sewer systems (MS4s);
- stormwater discharges associated with industrial activity; and,
- stormwater dischargers from construction sites.

According to the Basinwide Watershed Water Quality Assessment Report for the Pee Dee River Basin (SCDHEC, 2015), there are five (5) watersheds located within the PSA. These include Kingston Lake (3040206-08), Socastee Swamp-Waccamaw River (3040206-09), Outlet Waccamaw River-Atlantic Intracoastal Waterway (3040206-10), Little Pee Dee River (3040204-08), and Great Pee Dee River/Winyah Bay (3040207-02). According to the Basinwide Watershed Water Quality Assessment Report for the Pee Dee River Basin (SCDHEC, 2015), the following watersheds within the PSA contain active NPDES permitted facilities:

Within the Kingston Lake Watershed, there is one (1) active NPDES permitted facility within the PSA. NPDES permit SCG731247 authorizes minor industrial discharge to Crab Tree Swamp from the Browns Mobile Home Park/Brown Mine.

Within the Lee Pee Dee River Watershed, there are four (4) active NPDES permitted facilities within the PSA. NPDES permit SCG730036 and NPDES permit SCG730482 authorizes minor industrial discharge to Boyd Canal from the Cavu Inc./Buck Mine. NPDES permit SCG730562 authorizes minor industrial discharge to Dwight Creek from Kahm Farms LLC/Cannon Springs. NPDES permit SCG731197 authorizes minor industrial discharge to Big Cypress Swamp from Richard Smith/Mallard Farm Mine.

Within the Outlet Waccamaw River-Atlantic Intracoastal Waterway Watershed, there are four (4) active NPDES permitted facilities within the PSA. NPDES permit SCG731291 authorizes minor industrial discharge to Waccamaw River Tributary from AO Hardee & Son/Hwy 707 May Mine. NPDES permit SC0037753 authorizes major domestic discharge to Waccamaw River and Bull Creek from GSW&SA/Schwartz Plant. NPDES permit SC0040886 authorizes minor domestic discharge to Waccamaw River from GSW&SA/Bucksport WWTP.

Within the Socatee Swamp-Waccamaw River Watershed, there are ten (10) active NPDES permitted facilities within the PSA. NPDES permit SCG731299 authorizes minor industrial discharge to Socastee Creek Tributary from Robert O. Collins Co., Inc./Glens Bay Mine. NPDES permit SCG730267 authorizes minor industrial discharge to Waccamaw River Tributary from Robert O. Collins Co., Inc./Lake Ridge Mine. NPDES permit SCG731268 authorizes minor industrial discharge to Waccamaw River Tributary from RE Goodson/CBP PHIV Lake Ridge Mine. NPDES permit SCG731259 authorizes minor industrial discharge to Socastee Creek Tributary from Home Place Farm LLC/Weatherly Mine. NPDES permit SCG730113 authorizes minor industrial discharge to Willow Springs Branch Tributary from Richardson & Sons/Rickys Dirt. NPDES permit SCG731129 authorizes minor industrial discharge to Socastee Swamp Tributary from RCPS Properties/Hwy 501 Mine. NPDES permit SCG730057 authorizes minor industrial discharge to Waccamaw River Tributary from CL Benton & Sons, Inc./Sea Mist Mine. NPDES permit SCG730236 authorizes minor industrial discharge to Socastee Creek Tributary from Robert O. Collins Co., Inc./Forestbrook Mine. NPDES Permit SC0037753 authorizes major domestic discharge to Waccamaw River from GSW&SA/Schwartz Plant. NPDES Permit SC0021733 authorizes major domestic discharge to Bear Swamp from GSW&SA/Conway WWTP.

Within the Great Pee Dee River/Winyah Bay Watershed, there is one (1) active NPDES permitted facility within the PSA. NPDES permit SC0048461 authorizes minor municipal discharge to Great Pee Dee River Tributary from GSW&SA/Yauhannah Tree Farm.

5.4.2 Marinas and State Regulated Dams

There are three (3) marinas registered under the SCDHEC according to the SC Watershed Atlas (accessed December 2022) within the PSA. These include the Osprey Marina located along the Intracoastal Waterway Tributary, the Bucksport Plantation Marina located along the Waccamaw River, and the Hague Marina located along the Intracoastal Waterway. None of the previously mentioned marinas are located within the sixteen (16) alternative corridors.

Dams are regulated under the Dams and Reservoirs Safety Program are classified based on both hazard potential (high, significant, or low) and size (large, intermediate, small, or very small). Three (3) State regulated dams are located within the PSA according to the SC Watershed Atlas (accessed December 2022). These include the Martin Dam, identified as a low hazard Class 3 dam located at Martins Fishing Pond, the Martin Duck Pond Dam, identified as a high hazard Class 1 dam located at Big Cypress Lake, and the Conway Oxidation Pond, identified as a low hazard Class 3 dam located at Lake Busbee. None of the previously mentioned dams are located within the sixteen (16) alternative corridors.

5.5 Water Quality Summary

Mead & Hunt reviewed SCDHEC's Watershed and Water Quality Information, provided by an online query in July 2022. Please refer to **Appendix B, Figure 7-1 through 7-16** mapping for the location of water quality stations that each alternative drain to. **Appendix A, Table 70** provides detailed information on the water quality stations each alternative drains to and whether the station is listed on the 303(d) list.

Due to the existing water quality impairments, a TMDL is approved within the PSA watershed under the DO parameter. SCDHEC may require additional water quality protection and stormwater treatment measures during and after construction. However, the proposed project is not anticipated to contribute to these impairments or have long term impacts on water quality within the impaired watersheds.

During construction activities, temporary siltation may occur in adjacent waters and erosion may occur at a more rapid rate. It is recommended that the contractor minimize this impact through implementation of construction best management practices, reflecting policies contained in 23 CFR 650 B and S.C. Code of Regulations 72-400. The SCDOT has also issued an Engineering Directive Memorandum (Number 23), dated March 10, 2009, regarding Department procedures to be followed in order to ensure compliance with S.C. Code of 72-400, *Standards for Stormwater Management and Sediment Reduction*. Exposed areas may be stabilized by following the Department's Supplemental Technical Specification for Seeding (SCDOT Designation SC-M-810 (11-08)).

6 FLOODPLAINS

Floodplains are low-lying areas adjacent to rivers, streams, and other waterbodies that are susceptible to inundation during rain events. These areas provide important functions in the natural environment, such as providing storage for flood waters, protecting the surrounding environment from erosion, and providing habitat for wildlife. As such, agencies are required to take actions that reduce the risk of impacts to floodplains and their associated floodway or main channel of flow.

Floodplain and floodway protection are required under several federal, state, and local laws, including Executive Order 11988 entitled "Floodplain Management," which requires federal agencies to avoid making modifications to and supporting development in floodplains wherever practical. Floodplains subject to inundation by the one-percent-annual-chance (100 year) flood event are regulated by the Federal Emergency Management Agency (FEMA).

FEMA publishes maps which depict areas of regulated floodplains and floodways. The Flood Insurance Rate Map (FIRM) is the most common of these flood maps. FIRMs depict the boundaries of flood hazard areas and differentiates them by Zone.

Zone A floodplains are areas subject to inundation by the 1-percent-annual-chance flood event and are generally determined using approximate methodologies. Because detailed hydraulic analyses have not been performed, Base Flood Elevations (BFEs) or flood depths are not available for Zone A floodplains.

Zone AE floodplains are areas subject to inundation by the 1-percent-annual-chance flood event and are determined by detailed methods. BFEs are available for Zone AE floodplains and are provided on FIRMs.

Based upon a review of the floodplain mapping and a GIS analysis of the PSA, all sixteen (16) alternative corridors cross FEMA-regulated Zone AE floodplain and floodway; please see **Appendix B, Figure 8a-1 through 8g-6** for the location and extent of regulated floodplains in the vicinity of each alternative corridor.

In accordance with Executive Order 11988, a hydraulic analysis must be conducted for an encroachment of a FEMA-regulated floodplain. The hydraulic analysis is used to determine if the project is likely to increase the risk of flooding within the floodplain. In order to meet the requirements of a "No-Rise" condition, FEMA requires projects which would encroach on Regulated Floodways and Zone AE floodplains to result in a change no greater than 0.1 feet from the established 100-year flood elevations. Furthermore, SCDOT requires all Zone A crossings to be analyzed for the 100-year flood to ensure that the floodplain encroachment does not cause one (1) foot or more of backwater when compared to unrestricted or natural conditions.

The encroachment of the FEMA-regulated floodplains within the PSA are not anticipated to increase the risk of flooding within these floodplains and the proposed project would be designed to meet the "No-Rise" requirements. A preliminary hydraulic analysis will be performed for each encroachment of a FEMA-regulated floodplain and a detailed hydraulic analysis will be performed during final design.

7 THREATENED AND ENDANGERED SPECIES

The Federal Endangered Species Act (ESA) of 1973, as amended, is the federal regulatory tool that serves to administer permits, implement recovery plans, and monitor federally protected (endangered and threatened) species. The ESA is administered and regulated by the U.S. Fish and Wildlife Service (USFWS) and/or National Oceanic and Atmospheric Administration-National Marine Fisheries Service (NOAA-NMFS).

Because of the federal nexus of the proposed project, consultation with the USFWS is required under Section 7 of the ESA, as amended (16 USC 1531-1534), for proposed projects that "may affect" federally endangered and threatened species. This assessment analyzes potential impacts to federally endangered and threatened species associated with the proposed project, and is intended to initiate informal consultation, as needed.

Federal Protected Species - Species with the federal classification of Endangered (E) or Threatened (T) or Threatened due to Similarity of Appearance (T [S/A]) are protected under the ESA of 1973, as amended (16 U.S.C. 1531 et seq.). The term "endangered species" is defined as "any species which is in danger of extinction throughout all or a significant portion of its range," and the term "threatened species" is defined as "any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range" (16 U.S.C. 1532).

The term "Proposed" (P) is defined as "any species proposed for official listing as endangered or threatened." "Candidate" (C) species are taxons under consideration for which there is sufficient information to support listing, but development of a proposed listing regulation is precluded by other higher priority listing activities. "At-Risk

Species" (ARS) is an informal term that refers to those species which may be in need of concentrated conservation actions and have been petitioned for listing as threatened or endangered. The USFWS designations P, C, and ARS do not provide federal protection and require no Section 7 consultation under the ESA. The bald eagle also is no longer protected under the ESA but is afforded federal protection through the Bald and Golden Eagle Protection Act (BGEPA) of 1940. Please see **Appendix C**, for a USFWS List of Federally Protected Species in Horry County, SC and a USFWS Information for Planning and Consultation (IPaC) List of Federally Protected Species in the PSA.

State Protected Species – Animal species that are on the South Carolina state protected species list receive protection under the South Carolina Nongame and Endangered Species Conservation Act (South Carolina Code, Title 50). State endangered species are defined as any species or subspecies of wildlife whose prospects of survival or recruitment within the state are in jeopardy or are likely to be in jeopardy within the foreseeable future. It is unlawful for any person to take, possess, transport, export, process, sell or offer for sale or ship, and for any common or contract carrier knowingly to transport or receive for shipment any species or subspecies of wildlife appearing on the state list of protected species without appropriate authorization. State listed species are gathered from the South Carolina Department of Natural Resources (SCDNR).

Please see **Table 71** below for Federal (USFWS) and State (SCDNR) listed Protected Species in Horry County, SC (accessed December 2022).

TABLE 71: PROTECTED SPECIES IN HORRY COUNTY, SOUTH CAROLINA

PROTECTED SPECIES		PROTECTION	
Common Name	Scientific Name	Federal	State
Bird Species			
Black-capped petrel	*Pterodroma hasitata*	ARS	
American wood stork	*Mycteria americana*	T	E
Bald eagle	*Haliaeetus leucocephalus*	BGEPA	T

Kemp's ridley sea turtle**	*Lepidochelys kempii*	E, CH	-
Leatherback sea turtle**	*Dermochelys coriacea*	E, CH	-
Loggerhead sea turtle**	*Caretta caretta*	T, CH	T
Spotted turtle	*Clemmys guttata*	ARS	T
Snapping turtle	*Chelydra serpentina*	-	R
Chicken turtle	*Deirochelys reticularia*	-	R
Southern hognose snake	*Heterodon simus*	-	T
Striped mud turtle	*Kinosternon baurii*	-	R
Eastern mud turtle	*Kinosternon subrubrum*	-	R
Diamond-baked terrapin	*Malaclemys terrapin*	-	R
Eastern musk turtle	*Sternotherus odoratus*	-	R
Eastern box turtle	*Terrapene Carolina*	-	R

E = Endangered, T = Threatened, ARS = At Risk Species, C = Candidate, CH = Critical Habitat BGEPA = Bald and Golden Eagle Protection Act, R = Regulated
** Species is under the jurisdiction of the National Marine Fisheries Service (NMFS)*
***The USFWS and NMFS share jurisdiction of this species*
*ARS*Species that are either former Candidate Species or are emerging conservation priority species*

State and/or federally listed endangered and threatened species and their respective habitats are briefly described below:

American wood stork (*Mycteria americana*) – Federally Threatened / State Endangered

The American wood stork is a large, long-legged wading bird, approximately 45 inches in height with a wingspan of 60 to 65 inches. The species has mostly white plumage, excluding the black trailing edges of the wings and tail. The neck and head are primarily un-feathered with greyish black skin. The bill is black, thick at the base, and curves downward. The American wood stork prefers freshwater and estuarine wetlands for breeding, feeding, and roosting. These birds are colonial nesters with colonies that range from less than 12 to more than 500 nests. Nests can be located in small or large trees, typically occurring in trees found in standing water or on small islands. Feeding often occurs in water 6 to 10 inches deep.

Bald eagle (*Haliaeetus leucocephalus*) – Bald and Golden Eagle Protection Act / State Threatened

The bald eagle is a large raptor, with a wingspan of approximately seven feet, and mainly dark brown in color. Adults have a pure white head and tail. This species nests in large, mature live pine or cypress trees. Nests are typically large, up to six feet in width, and constructed of sticks and soft materials, such as dead vegetation, grass, and pine needles. Nesting trees are usually found within two miles of coasts, rivers, and lakes, near the bodies of water in which it feeds. The bald eagle primarily feeds on fish but also preys on a variety of bird, mammals, and turtles when fish are not readily available.

Piping Plover (*Charadrius melodus*) – Federally Threatened, State Endangered

The piping plover is a small shorebird approximately 6.5 inches long. This plover is sandy colored with white underparts and a black band around the forehead and chest. During the non-breeding season, the piping plover's distinct bands fade, the legs change from orange to yellow, and the bill changes from orange to black. Piping plovers nest on sandy beaches with sparse vegetation above the high water line. In the winter, they forage on coastal areas including mudflats, sand flats and coastlines.

Red-cockaded woodpecker (*Picoides borealis*) – Federally Endangered / State Endangered

Adult red-cockaded woodpeckers are approximately 7 to 8 inches long with a wingspan of 13 to 15 inches. Adults have a black cap, throat, and stripe on the side of the neck with white cheeks and underparts. The back is barred with black and white horizontal stripes. Adult males have a small red spot on each side of the black cap. The bird is native to southern pine forests and typically nests within open pine stands with trees 80 years or older. Roosting cavities are excavated within live pines, which are often infected with a fungus, which causes what is known as red-heart disease. Foraging may occur in pine and/or mixed pine/hardwood stands 30 years or older with trees 10 inches or larger in diameter at breast height (dbh).

Red knot (*Calidris canutus rufa*) – Federally Threatened

The rufa red knot is a subspecies of large shorebird approximately 25-28 inches long with a 20-22 inch wingspan and a relatively short straight bill and short thick legs. This species is distinguished by the reddish head and breast during breeding season. Most of the year the species is gray and heavily mottled with shades ranging from white to black on the back and wings and white underbelly. A seasonal migrant to the Carolinas, the red knot requires specific wintering and migration stopover areas comprised of marine and estuarine intertidal areas. Supra-tidal sandy habitats of inlets provide the best habitat. Because this species migrates in large groups, suitable habitat must be large enough to accommodate large numbers of foraging shorebirds.

Roseate tern (*Sterna dougallii*) Federally Endanagered

The roseate tern is a slender, delicately built seabird with a straight, thin, pointed bill, long, pointed wings and a very long, forked tail that extends beyond the wingtips when the bird is at rest. This species nests on island beaches of sand, pebbles, or shells, often near low vegetation. It forages in ocean waters from coastlines to deep water.

Eastern black rail (*Laterallus jamaicensis jamaicensis*) – Federally Threatened

Black rails nest in marshes and wet meadows, including riparian marshes, coastal prairies, saltmarshes, and impounded wetlands. All of its habitat have stable shallow water, usually just 1.2 inches deep at most. On the Atlantic and Gulf coasts, black rails nest in the higher, drier parts of marshes, where tidal activity is least and where different types of grasses, sedges, and rushes occur in mosaic-like patches. Key plants in these habitats include saltmeadow hay (*Spartina patens*), sand cordgrass (*Spartina bakeri)*, saltgrass (*Distichlis spicata*), needlerush species (*Juncus spp.*), and various species of pickleweed (*Saliconia spp.*).

Swallow-tailed kite (*Elanoides forficatus*) – State Endangered

The American swallow-tailed kite is a medium-sized migratory raptor that weighs just over a pound and has a 4-foot wingspan. This species is contrastingly black and white, where black coloring dominates the underside of its wing edges and tail feathers and the dorsal side of the body, and white coloration occupies the underside and head. This kite is distinguished by its slender body, long forked tail, and striking black and white coloration. American swallow-tailed kites are aerial hunters, feeding on insects, reptiles, and other birds. This species prefers large tracts of forested wetlands for nesting and foraging. Nesting birds occupy the top branches of tall trees within its chosen habitat. Common nesting trees include loblolly pine, bald cypress, and water tupelo. American swallow-tailed kites can be found in the early spring- summer in South Carolina.

Least tern (*Sterna antillarum*) – State Threatened

The smallest of the North American tern species, the least tern measures approximately 9 inches long with a 20-inch wingspan. Least terns are sexually monomorphic, with both males and females exhibiting grey plumage on their backs and wings, a white chest and undersection, and black caps and eye stripes. Least terns can be distinguished by their small size, yellow feet, and yellow bills with black tips. Least terns prefer sandy beaches, with ample shells and pebbles, near open water for nesting and foraging. These birds are colony nesters and lay eggs in small scrapes directly on the sandy beach or sometimes on roofs with pebbles when beaches are not abundant.

Atlantic sturgeon (*Acipenser oxyrinchus*) – Federally Endangered

The Atlantic sturgeon is an anadromous fish species which spends most of the year in brackish or salt water, and then moves into freshwater only to spawn during the spring. The Atlantic sturgeon is distinguished by its large body size, small mouth, and snout shape and scutes. The Atlantic sturgeon can grow up to 14 feet in length and weigh as much as 800 pounds. The Atlantic sturgeon is bluish-black or olive brown on the dorsal side and has paler sides and a white abdomen. The sides of the body exhibit five rows of scutes.

Shortnose sturgeon (*Acipenser brevirostrum*) – Federally Endangered / State Endangered
The shortnose sturgeon is an anadromous fish species which spends most of the year in brackish or salt water, and then moves into freshwater only to spawn during the spring. They are the smallest of three sturgeon species that occur in eastern North America. The shortnose sturgeon can grow up to 4.7 feet in length and can weigh up to 50 pounds. The shortnose sturgeon is dark-colored on its dorsal side and light on the ventral side and has a wide mouth pointed downward beneath a short snout. The sides of its body contain five rows of sharp, pointed plates, or scutes. The shortnose sturgeon inhabits the lower portions of large rivers and coastal rivers along the Atlantic Coast.

Carolina pygmy sunfish (*Elassoma boehlkei*) – State Threatened
The Carolina pygmy sunfish lacks a lateral line, has a relatively large eye, an upturned mouth, and a rounded caudal fin. Males of the species display alternating blue and black bars along their sides. The bars on the females alternate between dark brown and light brown. This specie inhabits slow-moving acidic waters of ponds, ditches, and streams in the coastal plain. This species is associated with abundant aquatic vegetation and shallow water.

Northern long-eared bat (*Myotis septentrionalis*) – Federally Endangered
The northern long-eared bat is a medium-sized bat with a total body length of approximately 3 to 3.7 inches and a wingspan of 9 to 10 inches. Their fur color can be medium to dark brown on the back and tawny to pale brown on the underside. The species is distinguished by its long ears, which when pushed forward, extend at least 4 millimeters past its nose. During the winter months, the northern long-eared bat can be found hibernating in caves and mines. They use areas in various sized caves or mines with constant temperatures, high humidity, and no air currents. During the summer, northern long-eared bats roost underneath bark, in cavities, or in crevices of both live and dead trees. Individuals of the species have also been found rarely roosting in structures, like barns and sheds.

Rafinesque's big-eared bat (*Corynorhinus rafinesquii*) – State Endangered
The Rafinesque's big-eared bat is a small bat, approximately 3 to 4 inches long with a wingspan that ranges from 10 to 12 inches. This species is distinguishable by its large ears which, when laid back, are almost half the length of the animal's body. The Rafinesque's big-eared bat is grey/brown on top and silvery on the bottom. The species inhabits the southeastern United States and will hibernate rather than migrate. Rafinesque's big-eared bat characteristically roots in dilapidated buildings or tree cavities near water and have been known to day-roost under bridges.

West Indian manatee (*Trichechus manatus*) – Federally Threatened / State Endangered
The West Indian manatee is a large aquatic mammal approximately 10 feet long and weighing 800-1,200 pounds. The manatee ranges in color from grey to light brown and has wrinkled skin covered sparsely with hairs. The West Indian manatee prefers shallow, slow-moving waters of rivers, estuaries, and saltwater bays. The West Indian manatee can move between both salt and freshwater habitats but prefers freshwater.

Finback whale (*Balaenoptera physalus*) – Federally Endangered
Finback whales are the second largest mammals on earth. They can grow to 65 feet long and weigh 77 tons. Fin whales can be distinguished by their long lean bodies, brown, grey dorsal surface, and deep white undersides.

The dorsal fin is 19 inches in height and found relatively far back on the body. Fin whales inhabit the temperate and polar zones of all major oceans and open seas. They tend to live in coastal and shelf waters, but none less than 200 meters deep.

Humpback Whale (*Megaptera novaengliae*) – Federally Endangered
The humpback whale can grow up to 60 feet in length and weigh up to 40 tons. Humpback whales are black on their dorsal side and mottled black and white on their underside. Distinguishing ventral pleats run from the jaw to the belly. Humpback whales are found in oceans all over the world and migrate large distances between feeding and mating regions.

Right Whale (*Balaena glacialis*) – Federally Endangered
Right whales have a stocky black body with some irregular white patches on the stomach and chest, and no dorsal fin. They can grow to be approximately 52 feet in length. Right whales can be distinguished by their raised patches of rough skin on their heads. North Atlantic right whales live in coastal Atlantic waters close to the continental shelf for most of their life.

Sei whale (*Balaenoptera borealis*) – Federally Endangered
The sei whale is identified by a dorsal fin, 38-56 ventral grooves, and two rows of 300-380 baleen plates. The species is dark grey or bluish grey on the back and sides, with a greyish white area on the ventral grooves of the lower jaw and underbelly. They are found in open oceans, migrating from November to February in the Northern Hemisphere and from May to July in the Southern Hemisphere.

Sperm whale (*Physeter macrocephalus*) – Federally Endangered
The sperm whale is dark grey in color, has a hump rather than a dorsal fin, and usually displays their tail flukes when they dive. Their skin is wrinkled to increase surface area for heat loss, giving them a shriveled look. Their heads make up one-third of their body length and are squarish in shape. They have a single, S-shaped blowhole located far forward and to the left of their head, which produces a distinctive angled spout or blow. Sperm whales live in every ocean in the world but stay away from extremely cold waters.

American chaffseed (*Schwalbea americana*) - Federally Endangered
American chaffseed is an erect perennial herb that is both parasitic and photosynthetic, producing their own food and feeding off the roots of a host plant. Leaves are alternate, fixed, and ascend in an overlapping spiral. The leaves, stem, and flowers are hairy throughout, and the stem branches off only at the base of the plant. The flowers are reddish purple and five lobed, and flower from April to June. The American chaffseed is fire or disturbance dependent and grows mainly in fire maintained longleaf pine flatwoods and savannahs in transitional areas between wetland and upland soils.

Canby's dropwort (*Oxypolis canbyi*) – Federal Endangered
Canby's dropwort is a perennial herbaceous plant with tuberous roots and pale, fleshy rhizomes, and erect stems up to 39 inches tall. The stems may be purplish at the base, and the leaves resemble quills. The flowers are small and white with 5 petals and grow in umbels or flat-topped clusters. Canby's dropwort grows in moist areas in the

coastal plain and sandhills, including wet meadows, wet pineland savannas, ditches, sloughs, and around the edges of Cypress-pine ponds. The plant seems to be more prolific when the habitat has been burned.

Pondberry (*Lindera melissifolia*) – Federally Endangered

The pondberry is a deciduous shrub approximately 6 feet tall at maturity. Pale yellow flowers appear in the spring before leaves reemerge. Fruits are oval shaped and half an inch long, turning from green in the summer, to bright red in the fall. The pondberry is distinguished by its drooping foliage, obtuse to rounded leaf base, and conspicuous venation. The leaves give off a sassafras-like odor when crushed. The pondberry is associated with wetland and bottomland habitats on the margins of sinks, ponds, and depressions.

Seabeach amaranth (*Amaranthus pumilus*) – Federally Threatened

The seabeach amaranth is an annual herb that is low growing and reaches a length of 4 inches by the end of the growing season. Leaves are thick and fleshy, spinach green, oval in shape, with a hollow notch at the tip. Habitat for the seabeach amaranth includes sandy beaches often of coastal or barrier islands in the foredune area above high tide line on non-eroding beaches. Seabeach amaranth is commonly found with sea rocket (*Cakile spp*.), Carolina saltwort (*Batis maritima*), and seashore elder (*Iva imbricata*). This species does not tolerate competition well and is not found in thickly vegetated areas.

Green sea turtle (*Chelonia mydas*) – Federally Threatened

Green sea turtle is one of the largest species of sea turtle reaching a size of 4 feet and weighing up to 440 pounds. It is characterized by a heart-shaped shell, a small head, and flippers with a single claw. The carapace is dark and smooth on the dorsal surface and light on the ventral surface. The green sea turtle occupies three main habitats including high-energy oceanic beaches, pelagic convergence zones, and benthic feeding grounds in shallow protected waters. These shallow water habitats are saltwater ecosystems containing a high abundance of algae and sea grass.

Kemp's Ridley sea turtle (*Lepidochelys kempii*) – Federally Endangered

Kemp's ridley sea turtles are some the smallest sea turtles with an adult size of 2 feet long and weight of roughly 100 pounds. It has an oval carapace that is normally olive-gray in color. The Kemp's ridley sea turtle has a triangular shaped head with a large, hooked beak. The diet of this turtle consists mostly of crabs; therefore, it is mostly found in near or inshore waters with muddy or sandy bottoms.

Leatherback sea turtle (*Dermochelys coriacea*) – Federally Endangered

The leatherback sea turtle is the largest of the sea turtles approximately 5 feet long and weighing 1,000 pounds. Unlike other turtles, the leatherback has a leathery shell with hard longitudinal ridges along it. This species is highly migratory, with one of the largest geographic distributions of any reptile. Leatherback sea turtles are found in South Carolina in concentrations from April to June following the migration of cannonball jellyfish (*Stomolophus meleagris*). Nesting females prefer high-energy beaches with deep unobstructed access to the ocean. Nesting in South Carolina is rare.

Loggerhead sea turtle (*Caretta caretta*) – Federally / State Threatened

The loggerhead sea turtle are approximately 3 feet long and weigh 250 pounds. They are reddish brown on their carapace, head, and the dorsal side of the flippers, and yellow on the plastron, neck, ventral side of the flippers and margins of the head. During the nesting season, May through mid-August, many loggerhead sea turtles congregate in coastal areas of South Carolina, nesting between the high tide mark and the primary dune front. Juveniles can be found in near coastal foraging grounds and in estuaries.

Spotted turtle (*Clemmys guttata*) – State Threatened
The spotted turtle is a small semi-aquatic turtle reaching sizes of 3.5-4.3 inches. The species has a black carapace, as well as a black head and neck, with small yellow-orange spots throughout. The species can be found in and surrounding natural intact ponds, streams, and rivers, as well as wetland and inundated areas of the coastal plain.

Southern hognose snake (*Heterodon simus*) – State Threatened
The southern hognose snake is a small snake approximately 14–20 inches in length with a distinctive upturned snout. The snake is typically tan-brown with darker blotches running down its back. The southern hognose snake inhabits sandhills, pine flatwoods, and coastal dunes.

7.1 Methodology

Due to the preliminary stage of analysis for the SELL project, no field reviews were conducted within each alternative corridor. A desktop review for any observed sighting of Federal or State listed protected species was conducted December 2022 using the South Carolina Natural Heritage Database. The PSA was analyzed within the context of all sixteen (16) alternative corridors.

7.2 Results

Based on initial desktop review, several sightings of protected species were identified. These include the following:

1. **Bald Eagle** was observed in 2022 at Lake Busbee, within 1 mile of Alternative Corridors 14-16.
2. **American chaffseed** was observed in 1954 (possibly extirpated now) just east of SC 544 and just south of US 378. This observed sighting is located right within Alternative Corridors 15 and 16. Another American chaffseed sighting was observed in 1985 (possibly historic) west of US 17 and just south of Freewoods Road. No alternative corridor is located at this sighting.
3. **Rafinesque's big-eared bat** roost was observed in 2022 along US 701 at the southernmost portion of the PSA. No alternative corridor is located at this sighting.

7.3 Environmental Commitments

In the event additional species are listed as federally threatened or endangered prior to the construction of the project, Horry County will consult with USFWS on the results of the surveys performed, if necessary, and will follow any USFWS regulations/requirements resulting from that consultation.

APPENDIX C

PROTECTED SPECIES LIST

HORRY COUNTY

CATEGORY	COMMON NAME/STATUS	SCIENTIFIC NAME	SURVEY WINDOW/ TIME PERIOD	COMMENTS
Amphibians	None Found			
Birds	American wood stork (T)	*Mycteria americana*	February 15-September 1	Nesting season
	Bald eagle (BGEPA)	*Haliaeetus leucocephalus*	October 1-May 15	Nesting season
	Black-capped petrel (ARS)	*Pterodroma hasitata*	April-October	Offshore water primarily
	Piping plover (T, CH)	*Charadrius melodus*	July 15-May 1	Migration and wintering
	Red-cockaded woodpecker (T)	*Picoides borealis*	March 1-July 31	Nesting season
	Red knot (T)	*Calidris canutus rufa*	August 1-May 31	Migration and wintering
	Saltmarsh sparrow (ARS)	*Ammospiza caudacuta*	Fall/winter	Fall/winter surveys
Crustaceans	None Found			
Fishes	Atlantic sturgeon* (E)	*Acipenser oxyrinchus**	February 1-April 30	Spawning migration
	Robust redhorse (ARS)	*Moxostoma robustum*	Late April-early May	Temperature dependent: 16-24ºC
	Shortnose sturgeon* (E)	*Acipenser brevirostrum**	February 1-April 30	Spawning migration
Insects	Monarch butterfly (C)	*Danaus plexippus*	August-December	Overwinter population departs: March-April
Mammals	Finback whale* (E)	*Balaenoptera physalus**	November 1-April 30	Off the coast
	Humpback whale * (E)	*Megaptera novaeangliae*	January 1-March 31	Migration off the coast
	Northern long-eared bat (T)	*Myotis septentrionalis*	Year round	Winter surveys not as successful
	Right whale* (E)	*Balaena glacialis*	November 1-April 30	Off the coast
	Sei whale* (E)	*Balaenoptera borealis*		
	Sperm whale* (E)	*Physeter macrocephalus*		
	Tri-colored bat (ARS)	*Perimyotis subflavus*	Year round	Found in mines and caves in the winter
	West Indian manatee (T)	*Trichechus manatus*	May 1-November 15	In coastal waters
Mollusks	None Found			

HORRY COUNTY

CATEGORY	COMMON NAME/STATUS	SCIENTIFIC NAME	SURVEY WINDOW/ TIME PERIOD	COMMENTS
Plants	American chaffseed (E)	*Schwalbea americana*	May-August	1-2 months after a fire
	Carolina-birds-in-a-nest (ARS)	*Macbridea caroliniana*	July-November	
	Ciliate-leaf tickseed (ARS)	*Coreopsis integrifolia*	August-November	
	Godfrey's stitchwort (ARS)	*Minuartia godfreyi*	April-June	
	Harper's fimbristylis (ARS)	*Fimbristylis perpusilla*	July-September	
	Seabeach amaranth (T)	*Amaranthus pumilus*	July-October	
	Venus flytrap (ARS*)	*Dionaea muscipula*	May-June	
	Wire-leaved dropseed (ARS)	*Sporobolus teretifolius*	August-September	Following fire
Reptiles	Green sea turtle ** (T)	*Chelonia mydas* **	May 1-October 31	Nesting and hatching
	Kemp's ridley sea turtle ** (E)	*Lepidochelys kempii***	May 1-October 31	In coastal waters
	Leatherback sea turtle ** (E)	*Dermochelys coriacea* **	May 1-October 31	Nesting and hatching
	Loggerhead sea turtle ** (T, CH)	*Caretta caretta* **	May 1-October 31	Nesting and hatching
	Spotted turtle (ARS)	*Clemmys guttata*	Feburary-early April	

*	Contact National Marine Fisheries Service (NMFS) for more information on this species.
**	The U.S. Fish and Wildlife Service (FWS) and NMFS share jurisdiction of this species.
ARS	Species that the FWS has been petitioned to list and for which a positive 90-day finding has been issued (listing may be warranted); information is provided only for conservation actions as no Federal protections currently exist.
ARS*	Species that are either former Candidate Species or are emerging conservation priority species.
BGEPA	Federally protected under the Bald and Golden Eagle Protection Act
C	FWS or NMFS has on file sufficient information on biological vulnerability and threat(s) to support proposals to list these species.
CH	Critical Habitat
E	Federally Endangered
P or P – CH	Proposed for listing or critical habitat in the Federal Register
S/A	Federally protected due to similarity of appearance to a listed species
T	Federally Threatened

These lists should be used only as a guideline, not as the final authority. The lists include known occurrences and areas where the species has a high possibility of occurring. Records are updated as deemed necessary and may differ from earlier lists.

For a list of State endangered, threatened, and species of concern, please visit https://www.dnr.sc.gov/species/index.html.

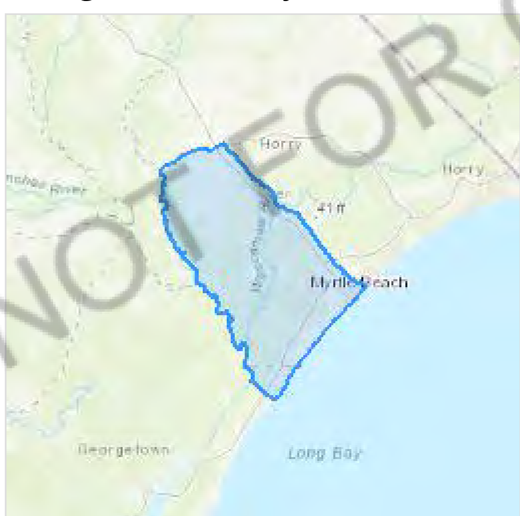
IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Georgetown , Horry , and Marion counties, South Carolina



Local office

South Carolina Ecological Services

(843) 727-4707
(843) 727-4218

176 Croghan Spur Road, Suite 200

Charleston, SC 29407-7558

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS
Northern Long-eared Bat Myotis septentrionalis Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9045	Endangered
West Indian Manatee Trichechus manatus Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/4469	Threatened Marine mammal

Birds

NAME	STATUS
Eastern Black Rail Laterallus jamaicensis ssp. jamaicensis Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/10477	Threatened
Piping Plover Charadrius melodus There is **final** critical habitat for this species. Your location overlaps the critical habitat. https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot Calidris canutus rufa Wherever found There is **proposed** critical habitat for this species. https://ecos.fws.gov/ecp/species/1864	Threatened
Red-cockaded Woodpecker Picoides borealis Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/7614	Endangered

Roseate Tern Sterna dougallii dougallii No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/2083	Endangered
Wood Stork Mycteria americana No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8477	Threatened

Reptiles

NAME	STATUS
Green Sea Turtle Chelonia mydas There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/6199	Threatened
Kemp's Ridley Sea Turtle Lepidochelys kempii Wherever found There is **proposed** critical habitat for this species. https://ecos.fws.gov/ecp/species/5523	Endangered
Leatherback Sea Turtle Dermochelys coriacea Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/1493	Endangered
Loggerhead Sea Turtle Caretta caretta There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/1110	Threatened

Insects

NAME	STATUS
Monarch Butterfly Danaus plexippus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
American Chaffseed Schwalbea americana Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1286	Endangered
Canby's Dropwort Oxypolis canbyi Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/7738	Endangered
Pondberry Lindera melissifolia Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1279	Endangered
Seabeach Amaranth Amaranthus pumilus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8549	Threatened

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

This location overlaps the critical habitat for the following species:

NAME	TYPE
Piping Plover Charadrius melodus https://ecos.fws.gov/ecp/species/6039#crithab	Final

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel Falco sparverius paulus This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
American Oystercatcher Haematopus palliatus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8935	Breeds Apr 15 to Aug 31

Bachman's Sparrow Aimophila aestivalis — Breeds May 1 to Sep 30

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/6177

Bald Eagle Haliaeetus leucocephalus — Breeds Sep 1 to Jul 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Black Guillemot Cepphus grylle — Breeds May 15 to Sep 10

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Black Scoter Melanitta nigra — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Black Skimmer Rynchops niger — Breeds May 20 to Sep 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5234

Black-legged Kittiwake Rissa tridactyla — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Brown Pelican Pelecanus occidentalis — Breeds Jan 15 to Sep 30

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Brown-headed Nuthatch Sitta pusilla — Breeds Mar 1 to Jul 15

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Cerulean Warbler Dendroica cerulea | Breeds Apr 26 to Jul 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/2974

Chimney Swift Chaetura pelagica | Breeds Mar 15 to Aug 25

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Eider Somateria mollissima | Breeds Jun 1 to Sep 30

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Common Loon gavia immer | Breeds Apr 15 to Oct 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/4464

Dovekie Alle alle | Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/6041

Eastern Whip-poor-will Antrostomus vociferus | Breeds May 1 to Aug 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Gull-billed Tern Gelochelidon nilotica | Breeds May 1 to Jul 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9501

Kentucky Warbler Oporornis formosus | Breeds Apr 20 to Aug 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

King Rail Rallus elegans

Breeds May 1 to Sep 5

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8936

Lesser Yellowlegs Tringa flavipes

Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9679

Long-tailed Duck Clangula hyemalis

Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/7238

Marbled Godwit Limosa fedoa

Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Painted Bunting Passerina ciris

Breeds Apr 25 to Aug 15

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Prairie Warbler Dendroica discolor

Breeds May 1 to Jul 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Prothonotary Warbler Protonotaria citrea

Breeds Apr 1 to Jul 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Purple Sandpiper Calidris maritima

Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Razorbill Alca torda — Breeds Jun 15 to Sep 10

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Red-breasted Merganser Mergus serrator — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Red-headed Woodpecker Melanerpes erythrocephalus — Breeds May 10 to Sep 10

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Red-throated Loon Gavia stellata — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Ring-billed Gull Larus delawarensis — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Royal Tern Thalasseus maximus — Breeds Apr 15 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Ruddy Turnstone Arenaria interpres morinella — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Rusty Blackbird Euphagus carolinus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

Surf Scoter Melanitta perspicillata — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Swallow-tailed Kite Elanoides forficatus — Breeds Mar 10 to Jun 30

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8938

White-winged Scoter Melanitta fusca — Breeds elsewhere

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Willet Tringa semipalmata — Breeds Apr 20 to Aug 5

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Wilson's Plover Charadrius wilsonia — Breeds Apr 1 to Aug 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Wood Thrush Hylocichla mustelina — Breeds May 10 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort – no data

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Marine mammals

Marine mammals are protected under the Marine Mammal Protection Act. Some are also protected under the Endangered Species Act[1] and the Convention on International Trade in Endangered Species of Wild Fauna and Flora[2].

The responsibilities for the protection, conservation, and management of marine mammals are shared by the U.S. Fish and Wildlife Service [responsible for otters, walruses, polar bears, manatees, and dugongs] and NOAA Fisheries[3] [responsible for seals, sea lions, whales, dolphins, and porpoises]. Marine mammals under the responsibility of NOAA Fisheries are **not** shown on this list; for additional information on those species please visit the Marine Mammals page of the NOAA Fisheries website.

The Marine Mammal Protection Act prohibits the take (to harass, hunt, capture, kill, or attempt to harass, hunt, capture or kill) of marine mammals and further coordination may be necessary for project evaluation. Please contact the U.S. Fish and Wildlife Service Field Office shown.

1. The Endangered Species Act (ESA) of 1973.
2. The Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) is a treaty to ensure that international trade in plants and animals does not threaten their survival in the wild.
3. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following marine mammals under the responsibility of the U.S. Fish and Wildlife Service are potentially affected by activities in this location:

NAME
West Indian Manatee Trichechus manatus https://ecos.fws.gov/ecp/species/4469

Coastal Barrier Resources System

Projects within the John H. Chafee Coastal Barrier Resources System (CBRS) may be subject to the restrictions on Federal expenditures and financial assistance and the consultation requirements of the Coastal Barrier Resources Act (CBRA) (16 U.S.C. 3501 et seq.). For more information, please contact the local Ecological Services Field Office or visit the CBRA

Consultations website. The CBRA website provides tools such as a flow chart to help determine whether consultation is required and a template to facilitate the consultation process.

This location overlaps the following CBRS unit(s):

System Unit (SU)

Most new Federal expenditures and financial assistance, including Federal flood insurance, are prohibited within System Units. ***Federally-funded projects within System Units require consultation with the Service.*** *Consultation is not required for projects using private, state, or local funds.*

SC-03 - SU 11/16/1990 - FI 11/16/1990
SC-03 - SU 12/18/2014 - FI 12/18/2014

Data limitations

The CBRS boundaries used in IPaC are representations of the controlling boundaries, which are depicted on the official CBRS maps. The boundaries depicted in this layer are not to be considered authoritative for in/out determinations close to a CBRS boundary (i.e., within the "CBRS Buffer Zone" that appears as a hatched area on either side of the boundary). For projects that are very close to a CBRS boundary but do not clearly intersect a unit, you may contact the Service for an official determination by following the instructions here: https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation

Data exclusions

CBRS units extend seaward out to either the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS data, therefore projects in the offshore areas of units (e.g., dredging, breakwaters, offshore wind energy or oil and gas projects) may be subject to CBRA even if they do not intersect the CBRS data. For additional information, please contact CBRA@fws.gov.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

This location overlaps the following National Wildlife Refuge lands:

LAND	ACRES
WACCAMAW NATIONAL WILDLIFE REFUGE	24,196.42 acres

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

This location did not intersect any wetlands mapped by NWI.

NOTE: This initial screening does **not** replace an on-site delineation to determine whether wetlands occur. Additional information on the NWI data is provided below.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

APPENDIX D
QUALIFICATION OF CONTRIBUTORS

Investigator:	Veronica Miller
Education:	Masters of Environmental Science; Florida Gulf Coast University, 2018 B.S. Biology; The University of Scranton, 2015
Experience:	Environmental Scientist, Mead & Hunt 2018-Present; Basic and Advanced Wetland Delineation Training Certified; Interagency Consultation for Endangered Species (Section 7) Training Certified; Surface Water Identification Certified (NCDEQ).
Responsibilities:	Wetland delineation, biological surveys, GPS point collection, GIS products, T/E species assessment.

Investigator:	Steve Brown, P.E.
Education:	B.S. Civil/Environmental Engineering; North Carolina State University, 1991.
Experience:	Over 15 years' experience in environmental consulting; Environmental Services Supervisor with Mead & Hunt.
Responsibilities:	QAQC of environmental documentation.

APPENDIX F

Floodplains Checklist

South Carolina Department of Transportation
Location and Hydraulic Design of Encroachments on Floodplains Checklist

23 CFR 650, this regulation shall apply to all encroachments and to all actions which affect base floodplains, except for repairs made with emergency funds. Note: These studies shall be summarized in the environmental review documents prepared pursuant to 23 CFR 771.

I. PROJECT DESCRIPTION

The Southern Evacuation Lifeline (SELL) is a proposed 29-mile limited access highway in Horry County, South Carolina. The purpose of the project is to provide the region with congestion relief, improved hurricane evacuation, and improved access to needed services east and west of the Waccamaw River.

A. Narrative Describing Purpose and Need for Project
   a. Relevant Project History:
   b. General Project Description and Nature of Work (attach Location and Project Map):
   c. Major Issues and Concerns:

A - There are sixteen (16) corridor alternatives that are currently being analyzed. Each begin at the existing intersection of US 501 and SC 22 northeast of the City of Conway in Horry County. **B** – Please see Project Description above and attached FEMA Floodplain Mapping for project location for each alternative. **C** - No major issues or concerns have developed.

B. Are there any floodplain(s) regulated by FEMA located in the project area?
   Yes☒ Varying degrees of floodplain within each Alternative (please see attached maps)
   No☐

C. Will the placing of fill occur within a 100-year floodplain?
   Yes☒ Varying degrees of fill within 100-year floodplains will occur within each Alternative (please see attached maps)
   No☐

D. Will the existing profile grade be raised within the floodplain?

Some alternative alignments include proposed interchanges at existing roadways that may include raising the existing roadway profile. The majority of floodplain impacts are new location alignments.

E. If applicable, please discuss the practicability of alternatives to any longitudinal encroachments.

This project includes alternative alignments with varying degrees of longitudinal floodplain encroachments. Minimizing impacts to other resources and roadway geometry limitations are additional considerations that limit the practicability eliminating all longitudinal encroachments.

F. Please include a discussion of the following: commensurate with the significance of the risk or environmental impact for all alternatives containing encroachments and those actions which would support base floodplain development:

   a. What are the risks associated with implementation of the action?

While the majority of encroachments are likely to be accompanied by risks commensurate with typical roadway floodplain encroachments, some encroachments studied as part of this project may impact insurable structures.

   b. What are the impacts on the natural and beneficial floodplain values?

Roadway encroachments will reduce the flood carrying capacity of the floodplain system, potentially increasing the base flood elevation for impacted floodplains within the vicinity of the encroachment.

   c. What measures were used to minimize floodplain impacts associated with the action?

Preliminary hydraulic structures at floodplain encroachments were designed following SCDOT Hydraulic Bridge Design Criteria, which were developed in accordance with FEMA, FHWA, and SCDNR guidelines.

   d. Were any measures used to restore and preserve the natural and beneficial floodplain values impacted by the action?

At this early stage of project development, no floodplain restoration or perseveration measures have been considered.

G. Please discuss the practicability of alternatives to any significant encroachments or any support of incompatible floodplain development.

The project includes alternative alignments, all with varying degrees of floodplain encroachments. Due to the nature of linear transportation projects and the topography and hydrology of the project site, elimination of significant floodplain encroachments is not practicable due to cost, constructability, and maintenance considerations.

H. Were local, state, and federal water resources and floodplain management agencies consulted to determine if the proposed highway action is consistent with existing watershed and floodplain management programs and to obtain current information on development and proposed actions in the affected? Please include agency documentation.

At this early stage of project development, coordination with such agencies has not yet been initiated.

APPENDIX G

Farmlands and Soil Resource Report

United States Department of Agriculture

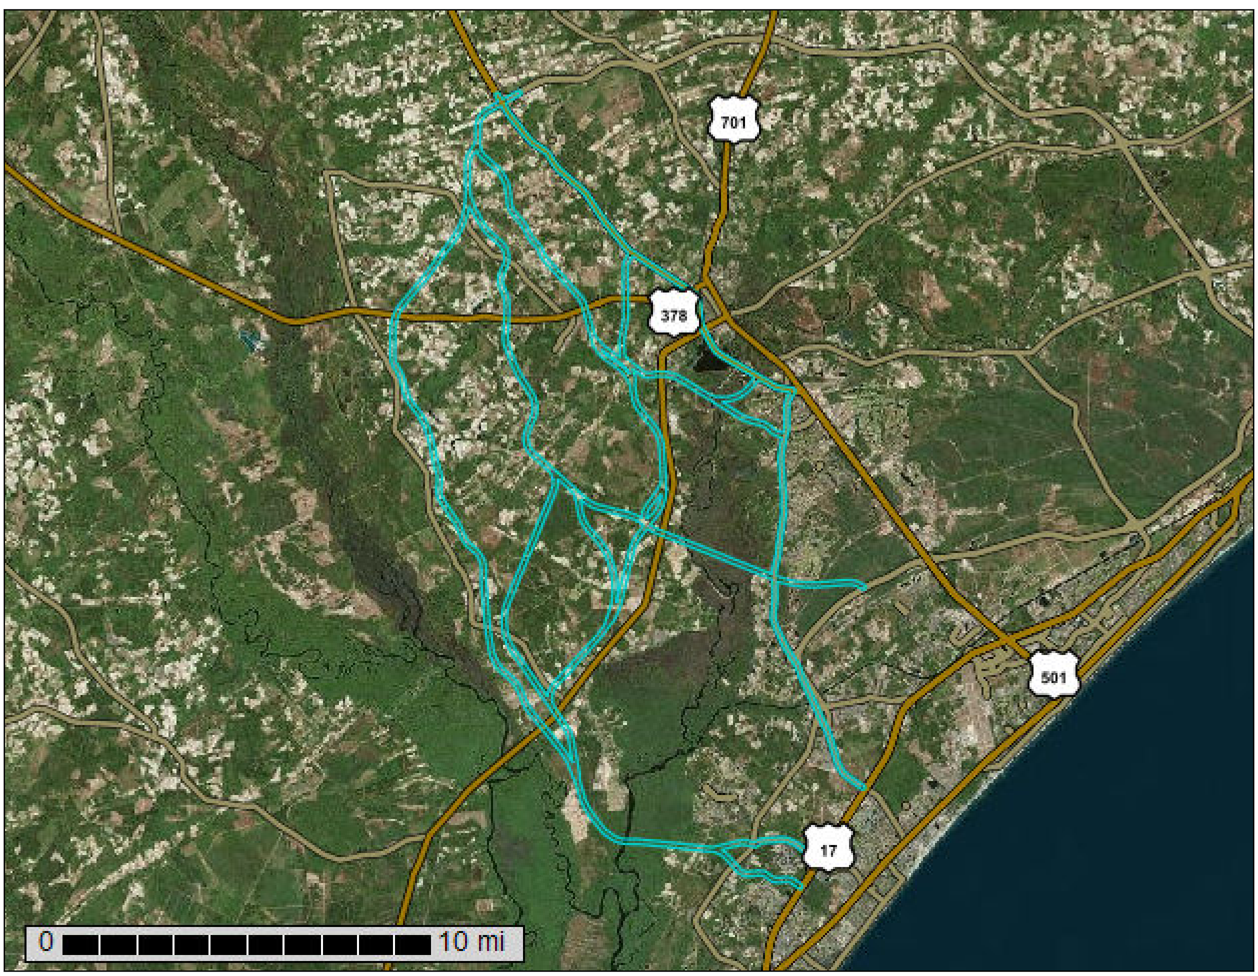
NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for

Horry County, South Carolina



July 26, 2022

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Contents

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Horry County, South Carolina
Survey Area Data: Version 24, Aug 30, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 1, 1999—Dec 31, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
Bd	Bladen fine sandy loam	1,121.1	11.6%
BnA	Blanton sand, 0 to 6 percent slopes	27.8	0.3%
Br	Brookman loam	30.7	0.3%
Ce	Centenary fine sand	313.1	3.2%
Co	Coxville fine sandy loam	9.6	0.1%
DuA	Duplin loamy fine sand, 0 to 2 percent slopes	18.8	0.2%
Ec	Echaw sand	629.5	6.5%
EuA	Eulonia loamy fine sand, 0 to 2 percent slopes	741.7	7.7%
EuB	Eulonia loamy fine sand, 2 to 6 percent slopes	126.7	1.3%
GoA	Goldsboro loamy fine sand, 0 to 2 percent slopes	162.6	1.7%
Ho	Hobcaw fine sandy loam	127.1	1.3%
Hy	Hobonny muck	279.8	2.9%
Jo	Johnston loam	228.5	2.4%
KeB	Kenansville fine sand, 0 to 6 percent slopes	344.3	3.6%
LaB	Lakeland sand, 0 to 6 percent slopes	432.8	4.5%
Le	Leon fine sand	302.8	3.1%
Ln	Lynchburg loamy fine sand	70.0	0.7%
Ly	Lynn Haven sand	332.0	3.4%
Me	Meggett loam	410.5	4.2%
NeA	Nansemond loamy fine sand, 0 to 2 percent slopes	207.9	2.1%
Og	Ogeechee loamy fine sand	570.2	5.9%
Os	Osier loamy sand	36.7	0.4%
Po	Pocomoke fine sandy loam	133.7	1.4%
Ru	Rutlege loamy sand	69.9	0.7%
SfA	Suffolk loamy fine sand, 0 to 2 percent slopes	46.0	0.5%
SfB	Suffolk loamy fine sand, 2 to 6 percent slopes	42.8	0.4%
Ud	Udorthents and Udipsamments, well drained	25.8	0.3%
W	Water	115.3	1.2%
Wa	Wahee fine sandy loam	559.0	5.8%

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
We	Witherbee sand	72.9	0.8%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Horry County, South Carolina

Bd—Bladen fine sandy loam

Map Unit Setting

National map unit symbol: 4cdx
Elevation: 10 to 60 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Bladen and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bladen

Setting

Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Clayey marine deposits

Typical profile

A - 0 to 6 inches: fine sandy loam
Btg - 6 to 62 inches: clay

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 5w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

BnA—Blanton sand, 0 to 6 percent slopes

Map Unit Setting

National map unit symbol: 4cdy

Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition
Blanton and similar soils: 85 percent
Minor components: 3 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Blanton

Setting
Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile
A - 0 to 11 inches: sand
E - 11 to 58 inches: sand
Bt - 58 to 75 inches: sandy clay loam

Properties and qualities
Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 60 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 4.3 inches)

Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3s
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Osier
Percent of map unit: 3 percent
Landform: Depressions, stream terraces, flood plains
Landform position (three-dimensional): Tread, dip
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Br—Brookman loam

Map Unit Setting

National map unit symbol: 4cf0
Elevation: 0 to 20 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Brookman and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Brookman

Setting

Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Clayey marine deposits

Typical profile

Ap - 0 to 10 inches: loam
Btg - 10 to 46 inches: clay
BCg - 46 to 60 inches: sandy clay loam
Cg - 60 to 68 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 10.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Hydric soil rating: Yes

Ce—Centenary fine sand

Map Unit Setting

National map unit symbol: 4cf1
Elevation: 0 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Centenary and similar soils: 85 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Centenary

Setting

Landform: Flats
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Sandy marine deposits

Typical profile

A - 0 to 5 inches: fine sand
E - 5 to 68 inches: fine sand
Bh - 68 to 80 inches: fine sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: About 42 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3s
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Osier

Percent of map unit: 4 percent
Landform: Depressions, stream terraces, flood plains

Landform position (three-dimensional): Tread, dip
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Co—Coxville fine sandy loam

Map Unit Setting

National map unit symbol: 4cf3
Elevation: 30 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Coxville and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Coxville

Setting

Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Clayey marine deposits

Typical profile

A - 0 to 8 inches: fine sandy loam
Btg - 8 to 60 inches: clay
Bcg - 60 to 72 inches: sandy clay

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.57 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 9.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

DuA—Duplin loamy fine sand, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cf4
Elevation: 30 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Duplin and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Duplin

Setting

Landform: Flats
Landform position (three-dimensional): Talf, rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey marine deposits

Typical profile

A - 0 to 9 inches: fine sandy loam
E - 9 to 17 inches: loamy fine sand
Bt - 17 to 35 inches: clay
BC - 35 to 70 inches: sandy clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.57 in/hr)
Depth to water table: About 24 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 9.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C
Hydric soil rating: No

Ec—Echaw sand

Map Unit Setting

National map unit symbol: 4cf5
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Echaw and similar soils: 95 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Echaw

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Sandy marine deposits

Typical profile

A - 0 to 4 inches: sand
E - 4 to 36 inches: sand
Bh - 36 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (1.98 to 19.98 in/hr)
Depth to water table: About 30 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 4.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3s
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Rutlege

Percent of map unit: 2 percent
Landform: Depressions, drainageways, flood plains, carolina bays

Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Leon

Percent of map unit: 2 percent
Landform: Flats, depressions
Landform position (three-dimensional): Talf, dip
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: Yes

EuA—Eulonia loamy fine sand, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cf7
Elevation: 10 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Eulonia and similar soils: 90 percent
Minor components: 6 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Eulonia

Setting

Landform: Flats
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey marine deposits

Typical profile

Ap - 0 to 8 inches: loamy fine sand
E - 8 to 12 inches: fine sandy loam
Bt - 12 to 40 inches: clay
BC - 40 to 55 inches: sandy clay loam
C - 55 to 80 inches: loamy sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.57 in/hr)

Depth to water table: About 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Hydric soil rating: No

GoA—Goldsboro loamy fine sand, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cf9
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Goldsboro and similar soils: 96 percent
Minor components: 2 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Goldsboro

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

Ap - 0 to 7 inches: loamy fine sand
Bt - 7 to 31 inches: sandy clay loam
Btg - 31 to 72 inches: sandy clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 24 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Woodington

Percent of map unit: 2 percent
Landform: Depressions, stream terraces, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Hydric soil rating: Yes

Ho—Hobcaw fine sandy loam

Map Unit Setting

National map unit symbol: 4cfb
Elevation: 20 to 60 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Hobcaw and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hobcaw

Setting

Landform: Depressions, drainageways, flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Loamy fluviomarine deposits

Typical profile

A - 0 to 15 inches: fine sandy loam
Btg - 15 to 48 inches: sandy loam
Cg - 48 to 68 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 7.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6w
Hydrologic Soil Group: B/D
Hydric soil rating: Yes

Hy—Hobonny muck

Map Unit Setting

National map unit symbol: 4cfc
Elevation: 10 to 20 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Hobonny and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hobonny

Setting

Landform: Depressions, drainageways, flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Concave, linear
Parent material: Loamy alluvium

Typical profile

Oa - 0 to 80 inches: muck

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 5.95 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Very high (about 13.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

Jo—Johnston loam

Map Unit Setting

National map unit symbol: 4cfd
Elevation: 10 to 60 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Johnston and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Johnston

Setting

Landform: Depressions, drainageways, flood plains, carolina bays
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Loamy alluvium

Typical profile

A - 0 to 30 inches: loam
Cg1 - 30 to 45 inches: loamy sand
Cg2 - 45 to 70 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 0 to 1 inches
Frequency of flooding: NoneFrequent
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

KeB—Kenansville fine sand, 0 to 6 percent slopes

Map Unit Setting

National map unit symbol: 4cff
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Kenansville and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Kenansville

Setting

Landform: Marine terraces
Landform position (three-dimensional): Talf
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Sandy marine deposits

Typical profile

A - 0 to 8 inches: fine sand
E - 8 to 28 inches: fine sand
Bt - 28 to 51 inches: sandy loam
C - 51 to 70 inches: sand

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 5.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2s
Hydrologic Soil Group: A
Hydric soil rating: No

LaB—Lakeland sand, 0 to 6 percent slopes

Map Unit Setting

National map unit symbol: 4cfg
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Lakeland and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lakeland

Setting

Landform: Marine terraces
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Sandy marine deposits

Typical profile

A - 0 to 8 inches: sand
C - 8 to 82 inches: sand

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Excessively drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Very low (about 3.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: A
Hydric soil rating: No

Le—Leon fine sand

Map Unit Setting

National map unit symbol: 4cfh
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Leon and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Leon

Setting

Landform: Flats, depressions
Landform position (three-dimensional): Talf, dip
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Parent material: Sandy marine deposits

Typical profile

A - 0 to 5 inches: sand
E - 5 to 9 inches: sand
Bh - 9 to 20 inches: sand
E' - 20 to 40 inches: sand
B'h - 40 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 5.95 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Very low (about 2.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

Ln—Lynchburg loamy fine sand

Map Unit Setting

National map unit symbol: 4cfj
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Lynchburg and similar soils: 94 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lynchburg

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 8 inches: loamy fine sand
Bt - 8 to 13 inches: sandy clay loam
Btg - 13 to 80 inches: sandy clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Woodington

Percent of map unit: 2 percent
Landform: Depressions, flats, stream terraces

Landform position (three-dimensional): Dip, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Hydric soil rating: Yes

Coxville
Percent of map unit: 2 percent
Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Ly—Lynn Haven sand

Map Unit Setting
National map unit symbol: 4cfk
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition
Lynn haven and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lynn Haven

Setting
Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Sandy marine deposits

Typical profile
A - 0 to 10 inches: sand
E - 10 to 13 inches: sand
Bh - 13 to 75 inches: sand

Properties and qualities
Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 5.95 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: None
Frequency of ponding: None

Available water supply, 0 to 60 inches: Moderate (about 8.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

Me—Meggett loam

Map Unit Setting

National map unit symbol: 4cfl
Elevation: 10 to 80 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Meggett and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Meggett

Setting

Landform: Drainageways, flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Concave, linear
Parent material: Clayey fluviomarine deposits

Typical profile

A - 0 to 4 inches: loam
Btg - 4 to 46 inches: clay loam
Cg - 46 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: NoneFrequent
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

NeA—Nansemond loamy fine sand, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cfn
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Nansemond and similar soils: 95 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Nansemond

Setting

Landform: Flats, stream terraces
Landform position (three-dimensional): Tread, rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 8 inches: loamy fine sand
E - 8 to 12 inches: loamy fine sand
Bt - 12 to 32 inches: fine sandy loam
BC - 32 to 54 inches: loamy fine sand
C - 54 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 5.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: A/D
Hydric soil rating: No

Minor Components

Rutlege

Percent of map unit: 2 percent
Landform: Depressions, drainageways, flood plains, carolina bays
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Woodington

Percent of map unit: 2 percent
Landform: Depressions, flats, stream terraces
Landform position (three-dimensional): Dip, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Hydric soil rating: Yes

Og—Ogeechee loamy fine sand

Map Unit Setting

National map unit symbol: 4cfr
Elevation: 20 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Ogeechee and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ogeechee

Setting

Landform: Depressions, flats
Landform position (three-dimensional): Talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 5 inches: loamy fine sand
Eg - 5 to 10 inches: loamy fine sand
Btg - 10 to 54 inches: sandy clay loam
BCg - 54 to 60 inches: sandy loam
Cg - 60 to 72 inches: loamy sand

Properties and qualities

Slope: 0 to 2 percent

Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 6.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Hydric soil rating: Yes

Os—Osier loamy sand

Map Unit Setting

National map unit symbol: 4cfs
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Osier and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Osier

Setting

Landform: Depressions, stream terraces, flood plains
Landform position (three-dimensional): Tread, dip
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Sandy marine deposits

Typical profile

A - 0 to 8 inches: loamy sand
Cg - 8 to 65 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: NoneFrequent

Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 4.2 inches)

Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 5w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

Po—Pocomoke fine sandy loam

Map Unit Setting
National map unit symbol: 4cft
Elevation: 10 to 60 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition
Pocomoke and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pocomoke

Setting
Landform: Depressions, drainageways, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Loamy marine deposits

Typical profile
A - 0 to 11 inches: fine sandy loam
E - 11 to 16 inches: loamy sand
Btg - 16 to 36 inches: sandy loam
Cg1 - 36 to 54 inches: loamy sand
Cg2 - 54 to 72 inches: sandy clay loam

Properties and qualities
Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.1 inches)

Interpretive groups
Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: B/D
Hydric soil rating: Yes

Ru—Rutlege loamy sand

Map Unit Setting

National map unit symbol: 4cfw
Elevation: 10 to 60 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Rutlege and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Rutlege

Setting

Landform: Depressions, drainageways, flood plains, carolina bays
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Parent material: Sandy fluviomarine deposits

Typical profile

A - 0 to 12 inches: loamy sand
Cg - 12 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

SfA—Suffolk loamy fine sand, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cfx
Elevation: 20 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Suffolk and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Suffolk

Setting

Landform: Marine terraces
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 8 inches: loamy fine sand
E - 8 to 14 inches: loamy fine sand
Bt - 14 to 44 inches: sandy clay loam
C - 44 to 72 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 1
Hydrologic Soil Group: B
Hydric soil rating: No

SfB—Suffolk loamy fine sand, 2 to 6 percent slopes

Map Unit Setting

National map unit symbol: 4cfy
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Suffolk and similar soils: 90 percent
Minor components: 6 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Suffolk

Setting

Landform: Marine terraces
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Side slope, interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy marine deposits

Typical profile

A - 0 to 8 inches: loamy fine sand
E - 8 to 14 inches: loamy fine sand
Bt - 14 to 44 inches: sandy clay loam
C - 44 to 72 inches: sandy loam

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Rutlege

Percent of map unit: 2 percent
Landform: Depressions, carolina bays, flood plains, drainageways
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Woodington

Percent of map unit: 2 percent
Landform: Depressions, flats, stream terraces
Landform position (three-dimensional): Dip, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Hydric soil rating: Yes

Coxville

Percent of map unit: 2 percent
Landform: Flats, depressions
Landform position (three-dimensional): Dip, talf
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: Yes

Ud—Udorthents and Udipsamments, well drained

Map Unit Setting

National map unit symbol: 4cg0
Elevation: 0 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Udorthents and similar soils: 51 percent
Udipsamments and similar soils: 49 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Udorthents

Setting

Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

C - 0 to 60 inches: sandy loam

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Very low to high (0.00 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: B
Hydric soil rating: No

Description of Udipsamments

Setting

Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Sandy marine deposits

Typical profile

C - 0 to 60 inches: sand

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6s
Hydrologic Soil Group: A
Hydric soil rating: No

W—Water

Map Unit Setting

National map unit symbol: 4cg1
Mean annual precipitation: 48 to 50 inches

Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Water: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Wa—Wahee fine sandy loam

Map Unit Setting

National map unit symbol: 4cg2
Elevation: 10 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Wahee and similar soils: 90 percent
Minor components: 6 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wahee

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey marine deposits

Typical profile

A - 0 to 7 inches: fine sandy loam
E - 7 to 11 inches: loam
Bt - 11 to 15 inches: clay loam
Btg - 15 to 56 inches: clay
BCg - 56 to 65 inches: sandy clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 9.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Hydric soil rating: No

Minor Components

Ogeechee

Percent of map unit: 2 percent
Landform: Depressions, flats
Landform position (three-dimensional): Talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Bladen

Percent of map unit: 2 percent
Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Meggett

Percent of map unit: 2 percent
Landform: Drainageways, flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

We—Witherbee sand

Map Unit Setting

National map unit symbol: 4cg3
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Not prime farmland

Map Unit Composition

Witherbee and similar soils: 90 percent
Minor components: 6 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Witherbee

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear

Across-slope shape: Linear
Parent material: Sandy marine deposits

Typical profile

A - 0 to 5 inches: sand
E - 5 to 22 inches: sand
Bh - 22 to 80 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: About 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: A/D
Hydric soil rating: No

Minor Components

Leon

Percent of map unit: 2 percent
Landform: Flats, depressions
Landform position (three-dimensional): Talf, dip
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: Yes

Rutlege

Percent of map unit: 2 percent
Landform: Depressions, drainageways, carolina bays, flood plains
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Lynn haven

Percent of map unit: 2 percent
Landform: Flats, depressions
Landform position (three-dimensional): Talf, dip
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: Yes

Wo—Woodington fine sandy loam

Map Unit Setting

National map unit symbol: 4cg4
Elevation: 10 to 110 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Woodington and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Woodington

Setting

Landform: Depressions, flats, stream terraces
Landform position (three-dimensional): Dip, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 8 inches: fine sandy loam
E - 8 to 14 inches: fine sandy loam
Btg - 14 to 47 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: A/D
Hydric soil rating: Yes

YaA—Yauhannah fine sandy loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 4cg5
Elevation: 10 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Yauhannah and similar soils: 90 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Yauhannah

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

Ap - 0 to 8 inches: fine sandy loam
Bt - 8 to 40 inches: sandy clay loam
BC - 40 to 48 inches: sandy loam
C - 48 to 72 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 18 to 30 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 7.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Bladen

Percent of map unit: 2 percent

Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Ogeechee

Percent of map unit: 2 percent
Landform: Depressions, flats
Landform position (three-dimensional): Talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Ye—Yemassee loamy fine sand

Map Unit Setting

National map unit symbol: 4cg6
Elevation: 10 to 100 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Yemassee and similar soils: 90 percent
Minor components: 4 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Yemassee

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 7 inches: loamy fine sand
E - 7 to 14 inches: loamy fine sand
Btg - 14 to 46 inches: sandy clay loam
BCg - 46 to 56 inches: sandy loam
Cg - 56 to 72 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Negligible

Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Ogeechee

Percent of map unit: 2 percent
Landform: Depressions, flats
Landform position (three-dimensional): Talf
Down-slope shape: Concave, linear
Across-slope shape: Concave, linear
Hydric soil rating: Yes

Bladen

Percent of map unit: 2 percent
Landform: Flats, depressions
Landform position (three-dimensional): Dip, talf
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: Yes

Yo—Yonges fine sandy loam

Map Unit Setting

National map unit symbol: 4cg7
Elevation: 10 to 80 feet
Mean annual precipitation: 48 to 50 inches
Mean annual air temperature: 64 to 70 degrees F
Frost-free period: 250 to 285 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Yonges and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Yonges

Setting

Landform: Depressions, flats
Landform position (three-dimensional): Dip, talf
Down-slope shape: Concave, linear

Across-slope shape: Concave, linear
Parent material: Loamy marine deposits

Typical profile

A - 0 to 16 inches: fine sandy loam
Btg - 16 to 40 inches: sandy clay loam
BCg - 40 to 68 inches: sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.57 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 8.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

Soil Information for All Uses

Suitabilities and Limitations for Use

The Suitabilities and Limitations for Use section includes various soil interpretations displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each interpretation.

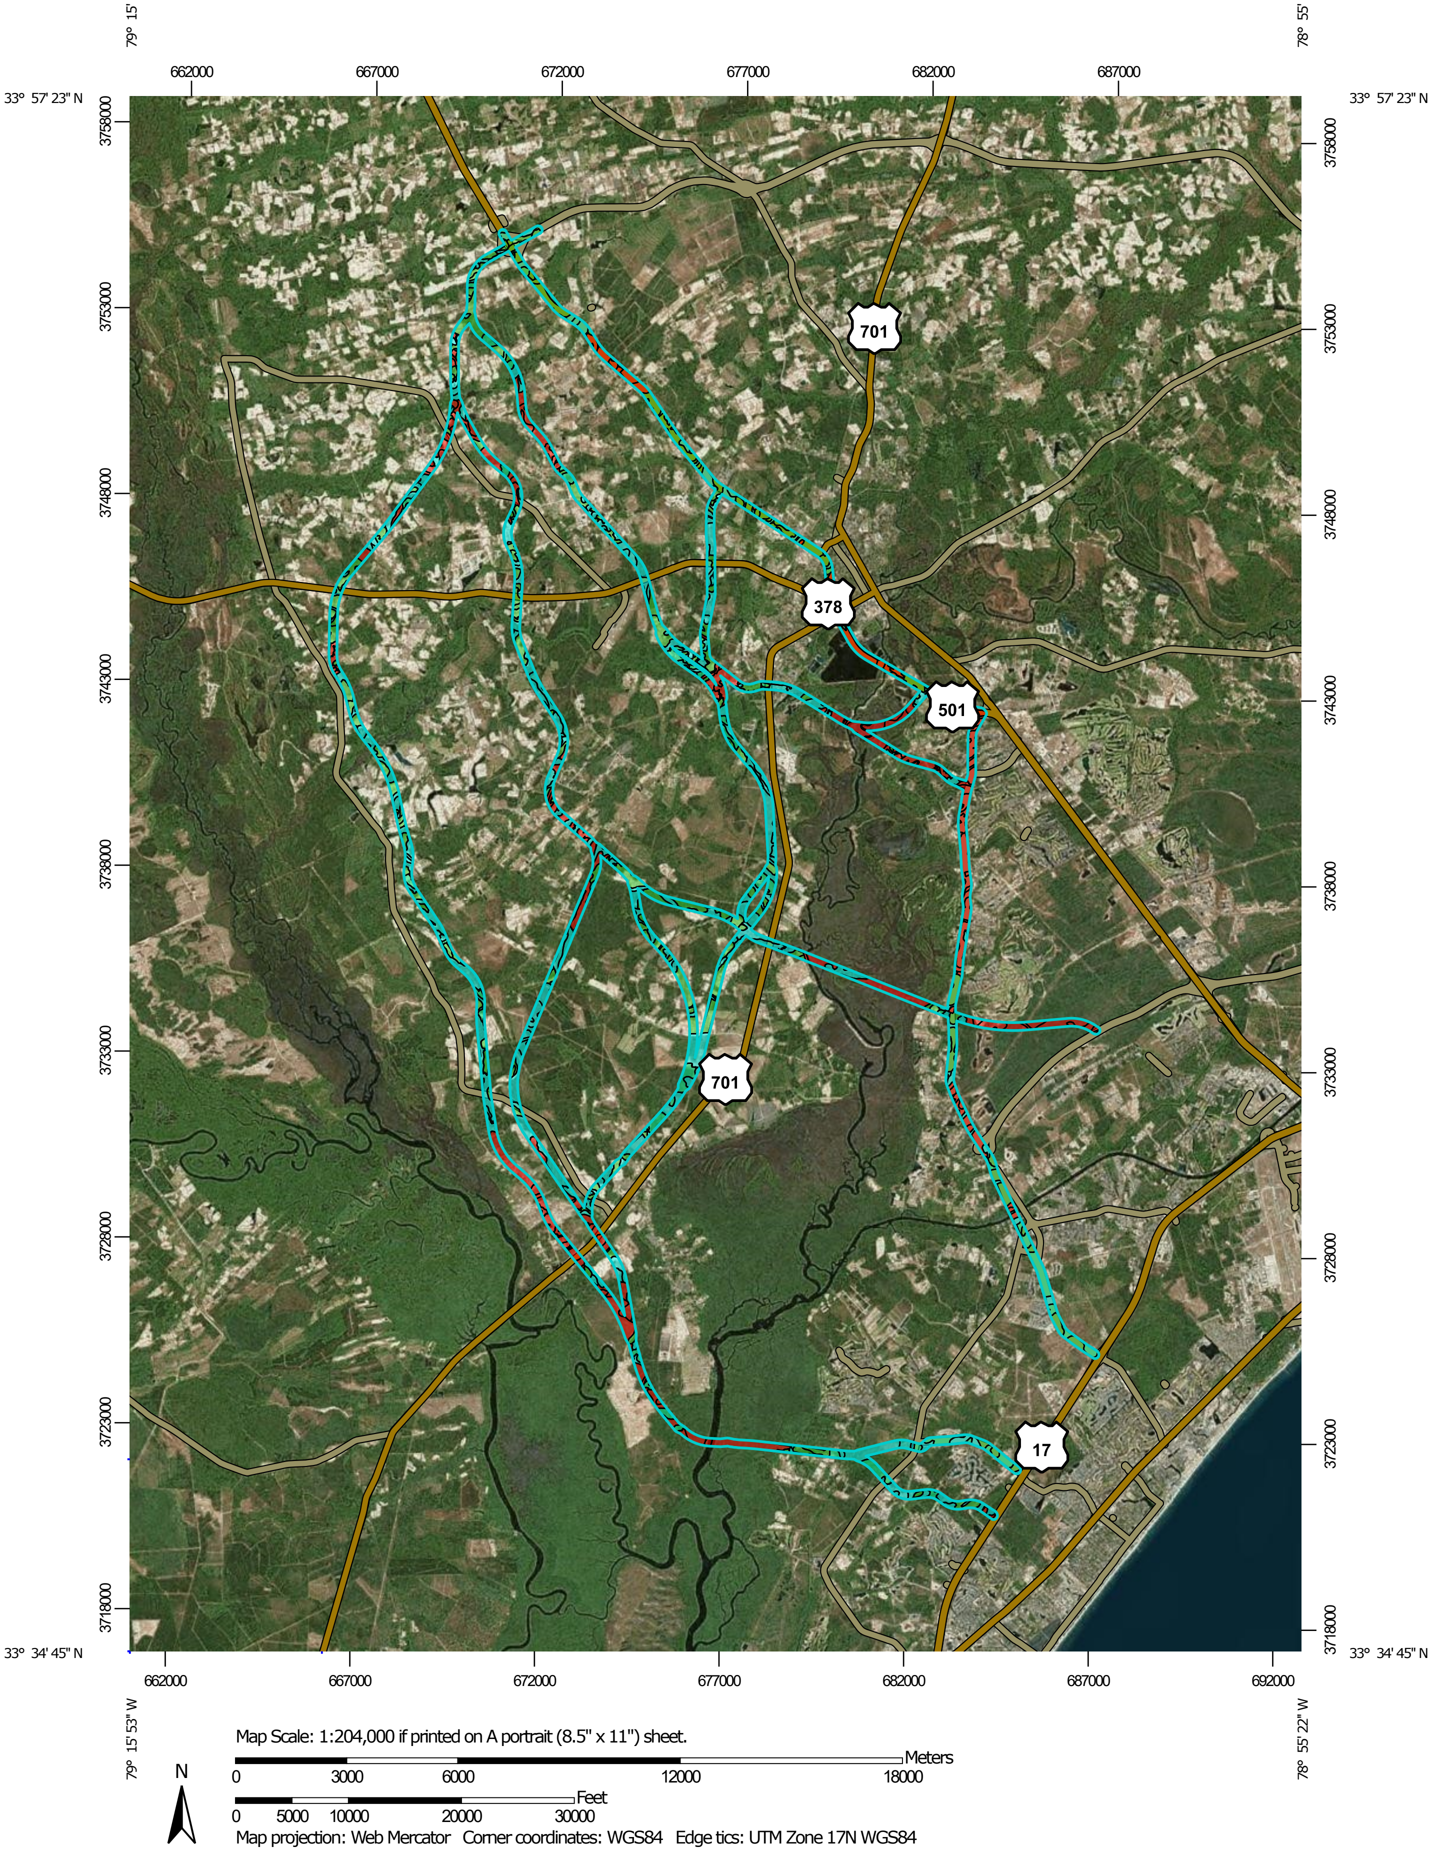
Land Classifications

Land Classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Farmland Classification (SELL Farmland)

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

Map—Farmland Classification (SELL Farmland)



Map Scale: 1:204,000 if printed on A portrait (8.5" x 11") sheet.

Meters: 0 3000 6000 12000 18000

Feet: 0 5000 10000 20000 30000

Soils

Soil Rating Polygons

- Not prime farmland
- All areas are prime farmland
- Prime farmland if drained
- Prime farmland if protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated
- Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated and drained
- Prime farmland if irrigated and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if subsoiled, completely removing the root inhibiting soil layer
- Prime farmland if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60
- Prime farmland if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance
- Farmland of statewide importance, if drained
- Farmland of statewide importance, if protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if irrigated
- Farmland of statewide importance, if drained and either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if irrigated and drained
- Farmland of statewide importance, if irrigated and either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if subsoiled, completely removing the root inhibiting soil layer
- Farmland of statewide importance, if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60
- Farmland of statewide importance, if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance, if drained or either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if warm enough, and either drained or either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if warm enough
- Farmland of statewide importance, if thawed
- Farmland of local importance
- Farmland of local importance, if irrigated
- Farmland of unique importance
- Not rated or not available

Soil Rating Lines

- Not prime farmland
- All areas are prime farmland

Background

- Aerial Photography

The soil surveys that comprise your AOI were mapped at 1:20,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Horry County, South Carolina
Survey Area Data: Version 24, Aug 30, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 1, 1999—Dec 31, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Table—Farmland Classification (SELL Farmland)

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
Bd	Bladen fine sandy loam	Farmland of statewide importance	1,121.1	11.6%
BnA	Blanton sand, 0 to 6 percent slopes	Not prime farmland	27.8	0.3%
Br	Brookman loam	Farmland of statewide importance	30.7	0.3%
Ce	Centenary fine sand	Not prime farmland	313.1	3.2%
Co	Coxville fine sandy loam	Farmland of statewide importance	9.6	0.1%
DuA	Duplin loamy fine sand, 0 to 2 percent slopes	All areas are prime farmland	18.8	0.2%
Ec	Echaw sand	Not prime farmland	629.5	6.5%
EuA	Eulonia loamy fine sand, 0 to 2 percent slopes	All areas are prime farmland	741.7	7.7%
EuB	Eulonia loamy fine sand, 2 to 6 percent slopes	All areas are prime farmland	126.7	1.3%
GoA	Goldsboro loamy fine sand, 0 to 2 percent slopes	All areas are prime farmland	162.6	1.7%
Ho	Hobcaw fine sandy loam	Farmland of statewide importance	127.1	1.3%
Hy	Hobonny muck	Not prime farmland	279.8	2.9%
Jo	Johnston loam	Not prime farmland	228.5	2.4%
KeB	Kenansville fine sand, 0 to 6 percent slopes	Farmland of statewide importance	344.3	3.6%
LaB	Lakeland sand, 0 to 6 percent slopes	Not prime farmland	432.8	4.5%
Le	Leon fine sand	Not prime farmland	302.8	3.1%
Ln	Lynchburg loamy fine sand	Prime farmland if drained	70.0	0.7%
Ly	Lynn Haven sand	Not prime farmland	332.0	3.4%
Me	Meggett loam	Farmland of statewide importance	410.5	4.2%
NeA	Nansemond loamy fine sand, 0 to 2 percent slopes	All areas are prime farmland	207.9	2.1%
Og	Ogeechee loamy fine sand	Farmland of statewide importance	570.2	5.9%
Os	Osier loamy sand	Not prime farmland	36.7	0.4%
Po	Pocomoke fine sandy loam	Not prime farmland	133.7	1.4%
Ru	Rutlege loamy sand	Not prime farmland	69.9	0.7%
SfA	Suffolk loamy fine sand, 0 to 2 percent slopes	All areas are prime farmland	46.0	0.5%

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
SfB	Suffolk loamy fine sand, 2 to 6 percent slopes	All areas are prime farmland	42.8	0.4%
Ud	Udorthents and Udipsamments, well drained	Not prime farmland	25.8	0.3%
W	Water	Not prime farmland	115.3	1.2%
Wa	Wahee fine sandy loam	Farmland of statewide importance	559.0	5.8%
We	Witherbee sand	Not prime farmland	72.9	0.8%
Wo	Woodington fine sandy loam	Farmland of statewide importance	108.9	1.1%
YaA	Yauhannah fine sandy loam, 0 to 2 percent slopes	All areas are prime farmland	1,199.1	12.4%
Ye	Yemassee loamy fine sand	Prime farmland if drained	691.2	7.1%
Yo	Yonges fine sandy loam	Farmland of statewide importance	83.1	0.9%
Totals for Area of Interest			**9,672.5**	**100.0%**

Rating Options—Farmland Classification (SELL Farmland)

NRCS-CPA-106
(Rev. 1-91)

FARMLAND CONVERSION IMPACT RATING FOR CORRIDOR TYPE PROJECTS

PART I *(To be completed by Federal Agency)*	3. Date of Land Evaluation Request	4. Sheet 1 of ____	
1. Name of Project Southern Evacuation Lifeline Alt 1	5. Federal Agency Involved FHWA		
2. Type of Project Transportation Corridor	6. County and State Horry County South Carolina		
PART II *(To be completed by NRCS)*	1. Date Request Received by NRCS	2. Person Completing Form	
3. Does the corridor contain prime, unique statewide or local important farmland? (If no, the FPPA does not apply - Do not complete additional parts of this form). YES ☑ NO ☐		4. Acres Irrigated	Average Farm Size
5. Major Crop(s)	6. Farmable Land in Government Jurisdiction Acres: %	7. Amount of Farmland As Defined in FPPA Acres: %	
8. Name Of Land Evaluation System Used	9. Name of Local Site Assessment System	10. Date Land Evaluation Returned by NRCS	

PART III *(To be completed by Federal Agency)*		Alternative Corridor For Segment ____			
		Corridor A	Corridor B	Corridor C	Corridor D
A. Total Acres To Be Converted Directly		305			
B. Total Acres To Be Converted Indirectly, Or To Receive Services		380			
C. Total Acres In Corridor		686	0	0	0
PART IV *(To be completed by NRCS) Land Evaluation Information*					
A. Total Acres Prime And Unique Farmland		404			
B. Total Acres Statewide And Local Important Farmland		415			
C. Percentage Of Farmland in County Or Local Govt. Unit To Be Converted		0			
D. Percentage Of Farmland in Govt. Jurisdiction With Same Or Higher Relative Value					
PART V *(To be completed by NRCS) Land Evaluation Information Criterion Relative value of Farmland to Be Serviced or Converted (Scale of 0 - 100 Points)*					
PART VI *(To be completed by Federal Agency) Corridor Assessment Criteria (These criteria are explained in 7 CFR 658.5(c))*	Maximum Points				
1. Area in Nonurban Use	15	15			
2. Perimeter in Nonurban Use	10	10			
3. Percent Of Corridor Being Farmed	20	20			
4. Protection Provided By State And Local Government	20	0			
5. Size of Present Farm Unit Compared To Average	10	10			
6. Creation Of Nonfarmable Farmland	25	0			
7. Availablility Of Farm Support Services	5	5			
8. On-Farm Investments	20	20			
9. Effects Of Conversion On Farm Support Services	25	0			
10. Compatibility With Existing Agricultural Use	10	0			
TOTAL CORRIDOR ASSESSMENT POINTS	160	80	0	0	0
PART VII *(To be completed by Federal Agency)*					
Relative Value Of Farmland (From Part V)	100				
Total Corridor Assessment (From Part VI above or a local site assessment)	160	80	0	0	0
TOTAL POINTS *(Total of above 2 lines)*	260	80	0	0	0

1. Corridor Selected:	2. Total Acres of Farmlands to be Converted by Project: 0	3. Date Of Selection:	4. Was A Local Site Assessment Used? YES ☐ NO ☐

5. Reason For Selection:

Signature of Person Completing this Part: | DATE

NOTE: Complete a form for each segment with more than one Alternate Corridor

CORRIDOR - TYPE SITE ASSESSMENT CRITERIA

The following criteria are to be used for projects that have a linear or corridor - type site configuration connecting two distant points, and crossing several different tracts of land. These include utility lines, highways, railroads, stream improvements, and flood control systems. Federal agencies are to assess the suitability of each corridor - type site or design alternative for protection as farmland along with the land evaluation information.

(1) How much land is in nonurban use within a radius of 1.0 mile from where the project is intended?
More than 90 percent - 15 points
90 to 20 percent - 14 to 1 point(s)
Less than 20 percent - 0 points

(2) How much of the perimeter of the site borders on land in nonurban use?
More than 90 percent - 10 points
90 to 20 percent - 9 to 1 point(s)
Less than 20 percent - 0 points

(3) How much of the site has been farmed (managed for a scheduled harvest or timber activity) more than five of the last 10 years?
More than 90 percent - 20 points
90 to 20 percent - 19 to 1 point(s)
Less than 20 percent - 0 points

(4) Is the site subject to state or unit of local government policies or programs to protect farmland or covered by private programs to protect farmland?
Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

CORRIDOR - TYPE SITE ASSESSMENT CRITERIA

The following criteria are to be used for projects that have a linear or corridor - type site configuration connecting two distant points, and crossing several different tracts of land. These include utility lines, highways, railroads, stream improvements, and flood control systems. Federal agencies are to assess the suitability of each corridor - type site or design alternative for protection as farmland along with the land evaluation information.

(1) How much land is in nonurban use within a radius of 1.0 mile from where the project is intended?
More than 90 percent - 15 points
90 to 20 percent - 14 to 1 point(s)
Less than 20 percent - 0 points

(2) How much of the perimeter of the site borders on land in nonurban use?
More than 90 percent - 10 points
90 to 20 percent - 9 to 1 point(s)
Less than 20 percent - 0 points

(3) How much of the site has been farmed (managed for a scheduled harvest or timber activity) more than five of the last 10 years?
More than 90 percent - 20 points
90 to 20 percent - 19 to 1 point(s)
Less than 20 percent - 0 points

(4) Is the site subject to state or unit of local government policies or programs to protect farmland or covered by private programs to protect farmland?
Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

CORRIDOR - TYPE SITE ASSESSMENT CRITERIA

The following criteria are to be used for projects that have a linear or corridor - type site configuration connecting two distant points, and crossing several different tracts of land. These include utility lines, highways, railroads, stream improvements, and flood control systems. Federal agencies are to assess the suitability of each corridor - type site or design alternative for protection as farmland along with the land evaluation information.

(1) How much land is in nonurban use within a radius of 1.0 mile from where the project is intended?
More than 90 percent - 15 points
90 to 20 percent - 14 to 1 point(s)
Less than 20 percent - 0 points

(2) How much of the perimeter of the site borders on land in nonurban use?
More than 90 percent - 10 points
90 to 20 percent - 9 to 1 point(s)
Less than 20 percent - 0 points

(3) How much of the site has been farmed (managed for a scheduled harvest or timber activity) more than five of the last 10 years?
More than 90 percent - 20 points
90 to 20 percent - 19 to 1 point(s)
Less than 20 percent - 0 points

(4) Is the site subject to state or unit of local government policies or programs to protect farmland or covered by private programs to protect farmland?
Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

CORRIDOR - TYPE SITE ASSESSMENT CRITERIA

The following criteria are to be used for projects that have a linear or corridor - type site configuration connecting two distant points, and crossing several different tracts of land. These include utility lines, highways, railroads, stream improvements, and flood control systems. Federal agencies are to assess the suitability of each corridor - type site or design alternative for protection as farmland along with the land evaluation information.

(1) How much land is in nonurban use within a radius of 1.0 mile from where the project is intended?
More than 90 percent - 15 points
90 to 20 percent - 14 to 1 point(s)
Less than 20 percent - 0 points

(2) How much of the perimeter of the site borders on land in nonurban use?
More than 90 percent - 10 points
90 to 20 percent - 9 to 1 point(s)
Less than 20 percent - 0 points

(3) How much of the site has been farmed (managed for a scheduled harvest or timber activity) more than five of the last 10 years?
More than 90 percent - 20 points
90 to 20 percent - 19 to 1 point(s)
Less than 20 percent - 0 points

(4) Is the site subject to state or unit of local government policies or programs to protect farmland or covered by private programs to protect farmland?
Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

CORRIDOR - TYPE SITE ASSESSMENT CRITERIA

The following criteria are to be used for projects that have a linear or corridor - type site configuration connecting two distant points, and crossing several different tracts of land. These include utility lines, highways, railroads, stream improvements, and flood control systems. Federal agencies are to assess the suitability of each corridor - type site or design alternative for protection as farmland along with the land evaluation information.

(1) How much land is in nonurban use within a radius of 1.0 mile from where the project is intended?
More than 90 percent - 15 points
90 to 20 percent - 14 to 1 point(s)
Less than 20 percent - 0 points

(2) How much of the perimeter of the site borders on land in nonurban use?
More than 90 percent - 10 points
90 to 20 percent - 9 to 1 point(s)
Less than 20 percent - 0 points

(3) How much of the site has been farmed (managed for a scheduled harvest or timber activity) more than five of the last 10 years?
More than 90 percent - 20 points
90 to 20 percent - 19 to 1 point(s)
Less than 20 percent - 0 points

(4) Is the site subject to state or unit of local government policies or programs to protect farmland or covered by private programs to protect farmland?
Site is protected - 20 points
Site is not protected - 0 points

(5) Is the farm unit(s) containing the site (before the project) as large as the average - size farming unit in the County ?
(Average farm sizes in each county are available from the NRCS field offices in each state. Data are from the latest available Census of Agriculture, Acreage or Farm Units in Operation with $1,000 or more in sales.)
As large or larger - 10 points
Below average - deduct 1 point for each 5 percent below the average, down to 0 points if 50 percent or more below average - 9 to 0 points

(6) If the site is chosen for the project, how much of the remaining land on the farm will become non-farmable because of interference with land patterns?
Acreage equal to more than 25 percent of acres directly converted by the project - 25 points
Acreage equal to between 25 and 5 percent of the acres directly converted by the project - 1 to 24 point(s)
Acreage equal to less than 5 percent of the acres directly converted by the project - 0 points

(7) Does the site have available adequate supply of farm support services and markets, i.e., farm suppliers, equipment dealers, processing and storage facilities and farmer's markets?
All required services are available - 5 points
Some required services are available - 4 to 1 point(s)
No required services are available - 0 points

(8) Does the site have substantial and well-maintained on-farm investments such as barns, other storage building, fruit trees and vines, field terraces, drainage, irrigation, waterways, or other soil and water conservation measures?
High amount of on-farm investment - 20 points
Moderate amount of on-farm investment - 19 to 1 point(s)
No on-farm investment - 0 points

(9) Would the project at this site, by converting farmland to nonagricultural use, reduce the demand for farm support services so as to jeopardize the continued existence of these support services and thus, the viability of the farms remaining in the area?
Substantial reduction in demand for support services if the site is converted - 25 points
Some reduction in demand for support services if the site is converted - 1 to 24 point(s)
No significant reduction in demand for support services if the site is converted - 0 points

(10) Is the kind and intensity of the proposed use of the site sufficiently incompatible with agriculture that it is likely to contribute to the eventual conversion of surrounding farmland to nonagricultural use?
Proposed project is incompatible to existing agricultural use of surrounding farmland - 10 points
Proposed project is tolerable to existing agricultural use of surrounding farmland - 9 to 1 point(s)
Proposed project is fully compatible with existing agricultural use of surrounding farmland - 0 points

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

MAPPED SITES SUMMARY
