

Locate all utilities prior to installation of earthquake drains.

Notes:

1. Place geotextile and drainage blanket as identified on elevation and plan views.
2. Remove the existing asphalt from Stations XX+XX.XX to XX+XX.XX and XX+XX.XX to XX+XX.XX prior to installation of the earthquake drains. In addition, excavate and remove the material between Stations XX+XX.XX to XX+XX.XX as shown on the plans prior to installation of the earthquake drains. Subsidence will occur during earthquake drain installation. Install the earthquake drains after installation of piles but prior to construction of the pile cap. This construction sequence will allow for the placement of additional borrow material, if required, after earthquake drain installation to achieve the pile cap finished subgrade. For Prefabricated Earthquake Drain with Filter Fabric, see Special Provisions.
3. For Geotechnical Bridge Lift materials, see Special Provisions.

Note to Designer:  
This template drawing furnished for information only. The sample details provided on this drawing must be replaced with project specific details and the notes must be modified appropriately. All drawings must be signed and sealed by a South Carolina Registered Professional Engineer when used.
