

**Qualified Product Policy for:
Air Entraining and Chemical Admixtures for Concrete**

All suppliers who wish to be included on the Qualified Product List (QPL) 5 for Air Entraining and Chemical Admixtures for Concrete must complete product evaluation by AASHTO's Product Evaluation and Audit Solutions program. Information on enrolling in the AASHTO evaluation program for Concrete Admixtures (CADD) can be found at <https://transportation.org/product-evaluation-and-audit-solutions/>.

Once AASHTO testing has been successfully completed, submit a letter requesting inclusion on SCDOT's QPL 5 with the product's AASHTO ID number and date of testing to the contact listed below. The product's test data will be reviewed for conformance with all applicable requirements of Subsection 701 of the SCDOT Standard Specifications (requires all air entraining admixtures to comply with AASHTO M 154 and accelerating, retarding, water reducing and specific performance admixtures to comply with AASHTO M 194). If the product meets all requirements it will be placed on QPL 5.

It is the supplier's responsibility to contact the Department in the event that the product's formulation changes. The Department reserves the right to request further testing by the supplier or AASHTO in order for the product to retain qualified status.

In order to remain on QPL 5, the product must remain current in AASHTO's Datamine and must be retested by AASHTO at least every 5 years. To confirm retesting status, submit the AASHTO ID number and date of testing to the contact listed below.

If at any time the product fails to perform satisfactorily, it may be removed from QPL 5 until improvements are made to the satisfaction of the SCDOT.
